Above cut from virgin timber. Grade and manufacture are first class.

Mears - Slayton Lumber Co. 1237 Belmont Ave. Chicago, Ill.

OUR DOUBLE BAND MILL-HUTTIG, ARK

₹Why We Can Give "Value Received"

We own one hundred thousand acres of the best virgin Southern Hardwood timber.

We operate large band mills at Huttig, Ark., and Deering, Mo.

We cut FORTY MILLION feet of hardwoods annually and carry 15,000,000 feet IN STOCK.

We sell only stock cut on our own mills and so can GUAR-ANTEE the quality of EVERY shipment.

We ship high grades that increase the size and percentage of your cuttings, reduce factory costs and shrink the waste pile. Therefore:

We can SAVE YOU MONEY on every shipment of oak, ash, gum, elm, cypress, tupelo, hickory, cottonwood, sycamore, soft maple and dimension.

LET US PROVE THIS ON YOUR NEXT ORDER

Wisconsin Lumber Company Harvester Bldg. CHICAGO

SAVE YOUR MONEY BY USING THE

RED BOOK Published Semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms,

Lumbermen's Credit Assn., ESTABLISHED

In the Market for Round Lots of Hardwood WRITE US BEFORE SELLING

Fisher Building, CHICAGO 'PHONE HARRISON 1984

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "inequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'd find it reduces the expense of laying and polishing.

Our Bookles tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The T. Wilce Company

Review and Outlook

General Market Conditions

S EVERAL INTERESTING FEATURES have developed during the last two weeks in connection with the general condition of the hardwood market. These features would indicate that there is a decided exception to the generally poor condition of trade, which exception exists among the millmen.

In the first place there comes the discussion which took place in connection with the meeting of gum manufacturers at Memphis on Oct. 18. At this meeting it was brought out that the actual amount of gum cut and sold during the past months of the present year has been greater than any other similar period. It was also developed that the actual condition of gum stocks is not anywhere near so serious as was expected before the meeting took place. In fact, an actual tabulation showed that the situation with gum was not at all alarming, even though as to actual market value it is way off and the demand is seemingly becoming more limited instead of broader.

In addition to this, there have come to the editorial desk of HARDWOOD RECORD advices from representative manufacturers in the mountain sections in eastern Kentucky and Tennessee and West Virginia to the effect that stocks in first hands are not heavy and stocks in the hands of consumers are exceedingly light, in fact, according to the statement of one big manufacturer, more so than that particular concern ever knew them to be. The writer of this same letter predicts that for the winter and spring trade the highest prices for all classes of hardwoods will prevail, and states that it makes this prediction after a great deal of thought and investigation. This opinion seems to be in conformity with that expressed by other big manufacturers in that particular section of the hardwood producing territory of the country, and opinions of this sort surely offer decided encouragement.

On top of this comes a most excellent report from the market conditions committee of the Michigan Hardwood Manufacturers' Association, which met at Detroit on Oct. 22. Northern reports have been more optimistic than southern reports for some little time and the statement of the market for northern hardwoods is in keeping with past conditions. Specifically, the report stated that the total stocks of hardwood lumber were but three and a half per cent greater on Oct. 1, 1913, than on Oct. 1, 1912, when stocks were considered unusually low and could not have been enough to supply a period of good general business activity. They are only eighty per cent of 1911 stocks. This report is shown in full under the heading of the meeting of that association in another part of this issue of HARDWOOD RECORD. It offers some interesting and valuable information relative to the condition of stocks of

the various northern woods delivered by the members of the association. Taken altogether, it demonstrates that Michigan manufacturers are justly in an optimistic frame of mind. This report backs up the statement of the southern manufacturer referred to regarding market values, it being stated that with the demand less than normal during the coming year, there should not be, and probably would not be, much if any concession from present prices, while with general business conditions good a material advance might be expected in the prices for northern hardwoods.

Thus can be seen tangible evidence indicating that the hardwood trade should not take conditions too seriously. On the other hand we have tangible evidence that there actually is a decided shading of prices in many of the markets, and it is difficult to make the two conditions jibe. Some support of the favorable condition reported is seen in the unquestionably good records for building operations. In many of the leading cities of the country figures are unusually favorable. This condition, however, is not without its serious exceptions.

Looking at the question in as broad a way as possible, HARDWOOD RECORD is of the opinion that there will probably be a slight feature of encouragement in the market which will make itself gradually more evident and that there will be no real reawakening of demand until certain political questions and questions of foreign policy have adjusted themselves. As stated on various occasions in these columns, business is without doubt on a sound basis fundamentally but, as also stated, business cannot side-step certain questions which are before the nation and which, whether business approves or not, will have an effect upon the country's markets. As to what this effect will be, it is difficult to say exactly, although it is safe to say in connection with the hardwood market that the actual volume of business, even though made up of a greater number of small orders for a few months to come will at least prevent an alarming accumulation of hardwoods at mill points.

A Night's Shelter

THE COVER PICTURE which illustrates the current number of Hardwood Record appeals to the woodsman. The temporary shelter is a luxury unknown in the centers of civilization, but belongs in the depth of the forest.

The woodsman when overtaken by night is able to make quick use of nature's resources in constructing a shelter that will shed the dew dripping from the trees, and the rain if the weather is wet. The picture shows a roof of bark resting on forked sticks as posts. With an ax, such a shelter can be constructed by a man in about one hour. He peels the bark from standing trees. That may be

done at certain times of the year only. Bark of most trees will not peel (woodsmen call it "slipping") after late spring and early summer. It is commonly said that it peels then because the sap is "going up." That will answer as an explanation if one does not want to be too particular. The fact is, however, that sap going up or coming down has little to do with the facility with which bark may be stripped at that time. The forming of the layer of new wood just beneath the bark is the cause of the slipping bark; but that is not particularly to the point in the present case.

Paper birch is about the only tree whose bark can be stripped off for practical purposes at all seasons; and that is because it separates into thin layers, independent of the new growth of wood forming beneath in early summer.

When the wayfarer wishes to build a forest shelter at a season when bark will not peel, he uses small branches, spruce and hemlock if he can get them. A fire built in front throws the heat inside the shelter, reflects it upon the camper, and he sleeps in comfort on the "spruce feathers," which is the name applied to the pile of twigs constituting his bed. If the wind happens to be in the wrong quarter, he gets a little more smoke than is conducive to his comfort.

There is luxury in such a camp for those who know how to enjoy it; but woe to the city greenhorn whose sole experiences have been with hair mattresses and eiderdown quilts. He will realize as never before how close his skeleton lies to his skin. The owner of one of the famous buildings of New York recently spent a night in such a shelter with a rustic guide in the mountains of West Virginia. He murmured, groaned, and knocked hour after hour, exclaiming every few minutes, "I'd give five thousand dollars to be in New York," Finally he raised it to "ten thousand dollars to be in New York," to which the mountaineer replied, "I don't know but that I'd give that much to have you in New York so I could get some sleep."

The cover picture shows a dense, typical hardwood forest in the luxuriant foliage of early summer. Back of the shelter stands a soft maple. Across the brook are fine yellow poplars, indicating fertile land. It is not a limestone soil, as is evidenced by the presence of the great laurel, for it will not grow on limestone. Numerous other species may be made out by the foliage, if one is disposed to examine closely. The brook flowing by completes the luxury; for the water in such a stream is purer than all the health boards in Christendom could make it with settling tanks, filters, disinfectants, and ultra violet rays.

Hardwood Paving Blocks

THE AMOUNT OF HARDWOOD PAVING in the United States is comparatively small, but there is no good reason why it should not increase. The requirements of a paving block are that it be readily impregnated with preservatives, be strong enough to withstand the stress of traffic, and not too high-priced. There are a number of hardwoods that comply with these conditions.

In the early history of wood block pavements hardwoods such as oak, cottonwood, mesquite and Osage orange were used. In nearly all of these cases the blocks were untreated, or at most dipped or boiled for a short time in tar, asphalt, or other mixture of supposed preservative value, and they failed in most cases to give satisfactory results. Untreated red gum from this country was tried in England and for a time raised great hopes, but it finally proved unsatisfactory. These failures, however, have no bearing on present conditions for with standard methods of treatment and laying now in use, many hardwoods are fully as efficient as conifers. But if the woods used are too dense, heavy and hard they will become more slippery than softer woods.

In the wood-paving experiments begun by the Forest Service in Minneapolis in 1906, one portion of Nicollet Avenue, 64 feet long and 50 feet wide was laid with white birch blocks which had been air seasoned for several months before being creosoted and used. The width and depth of the blocks was four inches, the lengths four, six and eight inches. The treatment was twenty pounds per cubic foot of creosote oil of lower specific gravity than

the specifications called for. Inspection after four years of continual service showed the average wear to be only three-sixteenths of an inch, which was exceeded by only one species. Some of the blocks, however, showed decayed heart, as a result probably of faulty inspection at the time of laying the payement.

The manager of the paving department of the Chicago Creosoting Company says: "Experience has proved that in the Central West we have at least four woods which, when tested by every possible requirement, are suitable for paving purposes. These woods are southern vellow pine, tamarack, hemlock and maple. One street paved in Chicago with southern gum is not considered a sufficiently conclusive experiment to warrant one to form a definite opinion. . . . Observations made at our plant during the past year show that maple is the wood most easily treated, followed closely by tamarack and hemlock, all three greatly outclassing vellow pine in this respect. . . . A little more than a year ago our company furnished enough hard maple blocks to lay the intersection of Madison Street with Fifth Avenue, one of the heaviest traveled spots in the city of Chicago. It is estimated that the daily vehicle traffic on Madison Street is eight thousand, while that on Fifth Avenue is over five thousand. Pounded by traffic from four directions, these blocks do not show the slightest sign of wear. In fact, so satisfactory was the result that the Chicago Railways Company purchased its entire supply for 1912, specifying maple."

Hardwood paving blocks are also coming into use for factory floors. While the use of hardwood for paving may be said to be in its experimental stage there is no doubt but there is a considerable future for the business if the hardwood manufacturers care to enter that field and push their product.

In the Midst of Change

A GREAT INDUSTRIAL CHANGE is actually taking place in this country, and it is attracting far less attention than its importance deserves. It is based on the development of hydroelectrical power, that is, water power transmitted by electricity. The dedication a few days ago of the great dam across the Mississippi at Keokuk called attention to that particular project; but most of the press comments were based on a comparison of the dam with Egypt's largest pyramid as to size. It was really a comparison of "great things to small."

The pyramid is a five-thousand-year-old monument to human folly, the Keokuk dam is a monument to progress and industry. The pyramid's one achievement was the harnessing of one hundred thousand men to do the work of one tyrant; but the installment at Keokuk will harness the forces of nature to do the work of three million men. Therein lies the difference between progress in the days of Cheops, and in the year 1913.

Great water power plants are being planned and installed in various parts of the country. Fifty years ago they would have been totally useless, utterly incomprehensible, because only a small part of the power could have been employed on the spot, and none of it could have been transmitted a hundred yards beyond the water wheels that developed it. Now electricity carries it hundreds of miles. One vast central plant may supply power to half a dozen states, and at so low a cost that coal cannot compete unless in proximity to the mines that produce it, and it is doubtful if it can long compete at the very mouth of the mine.

There is available water power in this country to turn every wheel, light every town, heat every home in the United States. Many of the installations will be enormous, others will be smaller; some will utilize the falls of large rivers, others will be built on smaller streams. Every ton of water that runs down hill has power in it which a turbine, a motor, and a few lines of wire will render available for use.

The Keokuk installment is the largest thus far in America; but it will not be the largest long. In the Sierra Nevada mountains in California, six thousand feet above the sea, a larger plant is partly completed. It will supply power three hundred miles away, and a stream so small that a sheep can wade across it will furnish it all.

Two other plants almost as large are planned in California. Other installments nearly or quite as large as that at Keokuk might, and doubtless will, be built on the upper Mississippi. More power is running to waste in the streams of the Rocky Mountains than that region can ever make use of. Two enormous power stations are under way in West Virgima, with room for a dozen more. That power will be available in the region between the Great Lakes and the Atlantic coast. New England and the southern Appalachians have enormous possibilities in the way of hydroelectric power.

The work is going on far more rapidly than the people realize. It is a fact that has been pointed out by historians that great movements, changes, and revolutions are seldom understood or appreciated by the people who actually live in the midst of the movements. The revolution in the development of mechanical power now going on in this country is a movement of that kind, and it is attracting comparatively little notice from the general public. The people will wake up in a few years and find that the United States has been electrified, and that the water power has been harnessed.

Lumbermen Should Stand by Wood

A TIMELY, SENSIBLE WARNING is sounded by The Construction News to those who handle and sell lumber that they should stand by their product. The warning is aimed particularly at dealers who sell lumber but

are not averse to handling all kinds of substitutes on the side. They sell paper roofing, metal ceiling, make-shift flooring, corrugated siding, when they ought to stand up for lumber and persuade their customers to take it and let sham substitutes alone. These dealers are willing to sell the substitutes because they think they see more immediate profit for themselves. They handle such things as a side line, and count all the profit as clear gain. They charge all expenses up to lumber, because they regard that as their main business, and if they can run in a substitute they seem to think it is good business. It is mighty poor business. They are helping to give wood a bad name by allowing buyers to believe there is something the matter with it, and that cheaper materials will answer as well. Dealers in wood owe it to their business to stand up for their busi-

ness and to quit nibbling at the bait dangled before them by the manufacturers of substitutes.

Timely Organization

E LSEWHERE IN THIS ISSUE OF HARDWOOD RECORD will be found a report of a gathering which can well be considered as of great importance insofar as its bearing on the manufacturing and marketing of gum is concerned. This meeting was called by men prominently known as red gum manufacturers, and was held at Memphis on October 18. Those familiar with the trend of the gum market during the last few months readily understand the reason for and significance of the meeting, and it has been clearly understood by gum manufacturers that some concerted action must be taken in order to prevent this most excellent American hardwood from again becoming the drug on the market which it formerly was.

The value of concerted action in association work has been too conclusively demonstrated in connection with the lumber business of the United States to leave room for a minute for any

argument unfavorable to the preposed organization of gan manufacturers. Hence the logical conclusion was, in face of the unfavorable conditions prevailing in the market for gum, that the only salvation of the trade was close association with a view to putting into effect uniformity of manufacturing and sales methods, and also to insure some concerted action for merchandising the product of the gum mills.

It could hardly have been expected that at the first meeting a permanent organization would be perfected, nor was such a step really to be desired so precipitantly, inasmuch as a hastly formed organization would unquestionably not embody the proper constitution and by-laws to lend themselves with sufficient elasticity to changing conditions. Steps were taken, however, in the appointment of committees of representative gum manufacturers, to work to the end of forming a permanent organization. These committees will report back to the meeting of the same people four weeks from the date of the first meeting.

The value of such a gathering was demonstrated by the Memphis meeting in spite of any sentiment that might have been encountered against organizations, inasmuch as through the reports from those in attendance it was learned that the situation of the gum market is really not nearly in such bad shape as it has been considered for several weeks. With this condition apparent, the

meeting will have a strong moral effect on the holders of gum and the result will be a noticeably strengthened market.

While the meeting was closed to representatives of trade papers, it was stated by those in attendance that the sentiment was strongly in favor of a permanent organization and that there is every probability that such an organization will be perfected within a very short time. If this comes to pass, and if the ambitious plans on foot for exploiting the products of the gum mills are carried through successfully, the next few months will see gum placed back among the leaders in the hardwood market of this country and abroad.

Not Practical

UDER A RECENT DATE HARDWOOD RECORD had a communication from a man interested in the marketing of for-

est products on the Pacific coast. The letter inquired for possible sources of supply for cheap three ply red gum panels, it being suggested by the writer that he saw no reason, inasmuch as red gum had attained considerable usage in the West for interior finish, why it could not be used very readily for packing case construction.

From the physical point of view, considering merely the qualities of the wood and its adaptability for the use suggested, there can be absolutely no doubt that packing cases made from red gum panels, three or five-ply, would, even in as small a thickness as onequarter inch, if properly reinforced and constructed, suit the purpose admirably.

The correspondent, however, overlooked one important factor, which absolutely eliminates the possibility of building up a trade in this particular line in the Pacific coast states, especially under present conditions. That factor is freight rates.

It is probable that the cheapest veneer he could get for the purpose would be stock costing five dollars per thousand at the mill. To utilize three-ply stuff would mean three times that cost for the area of the box to be made. On the other hand, the average rate from the Chicago territory to the coast on panels is \$2.60 per hundred pounds. It is easily seen from this fact that it would be absolutely impossible to cover even the cost of transportation in the sale, let alone the increased cost of gum over the western woods used for packing box construction. At \$1.25 a hundred for veneer shipments for the same distance, the prospect of developing a trade in this line for packing*case construction is still absolutely nil, and even where thin stock classed as lumber, including 1/15 inch and up in thickness, shipped at lumber rate of seventy-five cents, there is still no chance of making a business proposition out of it.

As stated, the physical qualities of gum are very well adapted for the purpose mentioned, and were the manufacturer in question seeking a high-class finish in furniture wood he could surely find no better domestic species than the lumber and veneers manufactured from a red gum tree. However, geographic circumstances absolutely prohibit the use of low grade stuff in the way he suggests.

Where Authority Conflicts

It is probably a necessity to have two governing bodies with jurisdiction over freight rate matters in interstate and intrastate business. States' rights seemingly demand that the governing of railroad rates within the border of any state shall be incumbent upon some authority within each state.

On the other hand, it is manifestly necessary to maintain a separate organization for the regulation of rates governing shipments on interstate commerce. Nevertheless there are numerous occasions on which a gross injustice is the result of such conflict of authority. One of the most flagrant of these would seem to be the readjustment of freight rates in Michigan based on the Interstate Commerce Commission's decision regarding the proposed general horizontal advance of five per cent in the central classification territory on the one hand, and on a recent order of the State Railroad Commission of Michigan on the other hand to the effect that a readjustment of Michigan rates is necessary.

It is contended by Michigan shippers that even though the railroads of Michigan declare that no injustice will be done, and that no action will be taken until a decision has been made on the general advance by the Interstate Commerce Commission, a gross injustice will be worked upon them which injustice would hit lumber shippers particularly strongly.

The basis of their contention is that the re-classification of rates in Michigan would mean the abolishment of commodity rates and the establishment throughout of class rates, which in itself will effect a decided increase in the present rates of lumber, it being placed in the sixth class. They contend that even after this readjustment has taken place if the Interstate Commerce Commission allows a horizontal advance of five per cent on general rates, advantage will be taken of such a decision by the Michigan roads to still further increase rates throughout the new tariffs, which will effect a total increase in Michigan rates ranging from five to thirty-three and one-third per cent as against a straight advance on general rates of but five per cent. The inequality of such an arrangement, and the injustice that it would surely result in are easily discernible.

It is not possible to foretell accurately what the ultimate outcome will be, but Michigan lumbermen at least are making active arrangements to secure an equal basis for shipments in competition with shipping points in adjoining states. It can readily be understood that if the entire matter of freight rates both interstate and intrastate were in the hands of some central body, such conditions would not even threaten.

Iowa's Example

THE FOREST WASTE PROBLEM has so nearly solved itself in Iowa, according to a recent report prepared by the Forest Service, that it is no longer a difficult problem there. Iowa is not and never was a heavily forested region with large logging operations, and to that extent it differs from many other states; but it

has dealt with the question of saving waste and has shown that it is not difficult to do, provided the economic conditions are favorable.

It has been found by experience that it is more profitable to ship logs from Minnesota to Iowa and manufacture the lumber at the point of destination than to saw the logs in the forest and ship the lumber only. The shipping of the logs in this case is by water, which method is much cheaper than by rail. The market is in Iowa. When the logs have floated down stream to the end of their water journey they need travel no further to reach market. They are there reduced to lumber, and it finds a sale near at hand. The market takes everything that comes. The lumber, lath, shingles, and squared timbers are wanted. The scraps are sold for fuel, and the sawdust is bought by ice houses or for stable bedding. The utilization is complete, and not a particle has to be given away, but everything turns some profit into the lumberman's pocket.

If the logs had been reduced to lumber in the Minnesota forests, nothing could have been sold without shipping. The lumber and one or two by products might have paid the freight and returned a profit; but all else would have been worthless and it would have been left at the mill.

No particularly new solution has been worked out in Iowa. The same thing has happened elsewhere. It will work wherever conditions are right. Examples of success are always valuable, however, because they are so much more easily understood than mere theory. If an owner of timber can figure out a way to ship his logs to a market that will take the lumber and all the by-products at a profit, he will be inclined to do it, in preference to sawing lumber at a place where the lumber only is salable.

The Making of a New Wood

A NEW WOOD has a hard time establishing its right to recognition. It takes a long time to get a hearing. The chances are against the new comer in the circle of accepted woods, and a long period of waiting and neglect usually precedes final recognition and acceptance. "Be not the first by whom the new is tried" appears to be the fashion among the users of forest products now as it was among the users of words in Alexander Pope's time.

No matter how excellent a new wood is, it is looked at askance when it first appears as a candidate for favor. Everybody waits for someone else to try it and demonstrate its good properties. That process is usually slow and long-drawn out. If the candidate for favor happens to be a foreign wood, it must wait still lorger. The prospective user considers several points before he will consent to give the new material a trial. He wants to know, first of all, if the supply is adequate, and if he can depend on securing what he needs, in case he finds it suitable. If not assured on that point, he is not likely to prosecute the inquiry further. If the supply is found satisfactory, the price is investigated, and if that is all right, the prospective market is looked into. It all takes time and results in years of uncertainty and delay.

A number of the well-known woods of the United States have had to pass through such periods of trial, apprenticeship, and neglect. For a long time they received no more recognition than if they had been foreign, perhaps not as much. Blackwillow is an instance. No one claims for it a higher place than among the minor species, but until recently it did not have even that much recognition but was classed among weed trees. It has come up out of that place of low esteem and now has more markets than it can fill. It is excellent box material, good for wagon beds, and highly satisfactory as cores or backing for veneers. The willow grows in scattered situations, or in dense small stands, but never in extensive forests. It is most abundant in the lower Mississippi valley, but trees in good situations attain respectable sizes in many parts of the United States. The growth is rapid, and acre for acre it will probably produce as many cubic feet of wood per year, as any other species in this country.

The willow is cited simply as an example of a neglected wood which finally made its way to the front. A number of others could be named, but it would be a repetition, for the process of securing recognition is the same with all—long delay, discouraging neglect, with ultimate success if success is deserved.

Pert, Pertinent and Impertinent

From Real Life

The Boss: What are you doing down there?

The Inspector: Looking for pin worm holes.

The Boss: You are a too damned technical inspector for me. You go to the office and get your pay.

All That Was Coming to Him

The cowboys were having a baseball game down in Texas. A big bushy ranger clouted the first ball over for a home run. Instead of circling the bases, however, he waited for the pitcher to deliver another ball.

"Why don't you run?" the crowd shouted.
"Got two more strikes yet."—Everybody's.

Exertion

In the southern part of Arkansas, where the natives take life easy, a man and his wife were one day sitting on the porch when a funeral proeession passed the house. The man was comfortably seated in a chair tilted back on its hind legs against the side of the house, and was engaged in whittling a piece of wood. As the procession proceeded, he said:

"I reckon ol' man Williams's got about the biggest funeral that's ever held aroun' byear, Caroline."

"A purty good-sized one, is it, Bud?" queried the wife, making no effort to move.

"You betcher!" Bud answered.

"I certainly would like to see it," said the woman. "What a pity I ain't facin' that way!"

Making Up for Lost Time

Applicant "Well, I just finished flekln' fourteen other fellers that were waitin' out in the hall."- Boston Evening Transcript

The Adirondack Hardwoods

From the viewpoint of the number industry, New York has passed through an exceedingly interesting lustory. In speaking of lumber ing in this state, one at once thinks of the Adirondacks, which is the producing center of the lumber industry. Originally, only the white pine was cut; then the spruce was cut over, and for a long time in the old lumber days the hemlock and hardwoods were regarded as being almost worthless, or certainly not worth while taking to the mill. Finally the hemlock, which only a few years ago brought an average of from seven to ten dollars per thousand board feet, millrun and which now lyings from eighteen to twenty five dollars per thousand millrun, was logged along with the spruce and the pine. The advanceing price of the hemlock bark for tanning purposes was the stimulus needed to bring this tree on the market. Then finally, with the increase in value and the general recognition of their wide use for so many purposes in various lines of utilization, the hardwoods began

to be cut until at the present time, there are nearly as many hardwoods being lumbered as softwoods.

As a result of this progression in cutting, the second growth is almost entirely hardwood-that is from twenty to one hundred years ago only the white pine and better spruce were taken out which left the hardwoods to occupy the soil. At the present time therefore, there are several logging operations in progress on areas that are now practically pure hardwoods and which up to about thirty years ago, were at least partly covered by pine and spruce. One large tract of 68,000 acres which was recently purchased and is now being logged by a large hardwood operator, was cut over about twenty-

five years ago for spruce, and not a stick of the hardwoods touched. The late Col. Fox. a veteran lumberman of the Adirondacks and for a long time state superintendent of forests stated that in his opinion about seventy or eighty per cent of the Adirondacks are now composed of hardwoods; and this region is commonly known as the center of a great spruce

One promiment reason for this condition, of course, is the local custom of driving which has existed in the Adi-

rondacks from the earliest history of the lumber industry. This region contains a large number of excellent drivable streams which naturally afford the cheapest means of transporting the softwoods to the mills. This obviously left the logging of the non-drivable bardwoods out of the question. It is only within the last few years therefore that railroad logging has been introduced to afford a means of getting out the splendid big maple, beech, birch, basswood, cherry and other hardwood logs.

Within recent years, the stumpage price of 'hardwoods has ad-

vanced remarkably. This is only a natural result of the above described history. White pine stumpage brings from \$9 to \$12 per thousand, depending upon accessibility and condition. Spruce brings from \$7 to \$10 per thousand and the hardwoods from \$5 to \$12 per thousand. Ten years ago, hardwood stumpage could be purchased for about \$2 or \$3 per thousand, depending largely on species and location. Within the last two years, however, large purchases have been made at a stumpage rate of around \$5 per thousand on the average for all species, based on a fairly accurate estimate. It has recently been estimated by the forestry officials of the state that if all the trees were taken into consideration, between seventy-five per cent and eighty five per cent of all the present growing timber in the Adirondacks would be found to be composed of hardwoods. Fifty years ago probably sixty per cent of the merchantable timber at least was composed of white pine, spruce, and hemlock.

During the year 1911 approximately onehalf-billion board feet of lumber was cut in New York. The hardwoods represented m this cut are best shown in the following table. The average wholesale prices at the mill as given in the Bureau of Census reports are also shown:

		Yearly cut	Price
Species		M feet B. M.	at mill
Hard maple		65,313	\$16.52
Beech		41.026	14.43
Basswood .		29,638	20.81
Birch		28.465	17.46
Dalk		27.446	21.45
thestnut		16.541	17.44
Elm		12.462	18.76
Ash		10,727	21.46
Mise includ	ing hickory, wa	a1-	
	ternut, cheri		
	ote		

238 648

The total cut of the softwoods in 1911 amounted to 288,000,000 board feet, exceeding that of the hardwoods by only about 50,000 .-000 feet. And when one considers the great amounts of hardwoods utilized in the many industries which are not shown in the Census lumber reports, this apparent discrepancy would rapidly disappear. The majority of the softwoods shown in the above cut in fact is composed of hemlock which. twenty years ago, scarcely entered the markets at all.

GOOD STAND OF MIXED HARDWOODS

GENERAL VIEW OF ROLLWAY, MILLS AND YARDS OF THE EMPORIUM LUMBER COMPANY. A LARGE HARDWOOD OPERATION AT CONIFER IN THE HEART OF THE ADIRONDACKS

The principal Adirondack hardwoods cut are, therefore, hard maple, beech, basswood, birch and oak, with some elm, chestnut, ash and hickory found chiefly at the lower elevations and in the many woodlots.

In former years, practically all of the hardwoods consumed in the state were brought in from the Middle West and the Lake State region, and the real cause of the increased stumpage prices obtained in the Adirondack region is the increasing demand for wood used in the various lines of utilization. The prices obtained for forest

products and particularly for the better hardwoods are probably as good in New York as in any other state in the Union on account of the dense population, varied wood consuming industries and special manufacturing interests. For instance, the Brooklyn Cooperage Company of Tupper Lake makes practically all of the sugar barrels used in the New York and Philadelphia trade. There is also an almost countless number of small slack cooperage plants located all over the state to supply barrels, especially for fruit shipping. Western New York still maintains its high position as a producer of apples and the large quantities of barrels used in this industry bring from forty to forty-five cents apiece.

In the future, it is estimated that the hardwoods will more than ever hold their present important position in the lumber production of the Adirondack region. The hardwoods replace themselves so readily by sprouting and by scattering their seeds over both cutover and burned areas that they gradually occupy areas formerly covered by the white pine, spruce and hemlock.

For several years around 1860 New York was a leader in lumber production. At the present time it is the twenty-third state on the list; but in spite of this wide discrepancy statistics show that the present value of lumber produced is approximately the same as that of 1860. Moreover, New York used to supply a large portion of the wood consumed within the state. Now it sends from \$15,000,000 to \$20,000,000 out of the state for forest products every year. The New York Central Railroad alone spends between \$3,000,000 and \$3,500,000 a year for ties, which could easily be produced within the borders of the state. It is very fortunate that New York has taken the leadership in forestry work, having a total forest reserve area of over 1,600,000 acres of which 1,400,000 are in the Adirondacks. There are over 19,000,000 seedlings in eight state nurseries in which vellow poplar, red oak, black locust, honey locust and a variety of hardwoods are being raised and set out over the state in addition to the white pine, Norway pine, Scotch pine and Norway spruce.

A great deal of splendid work has also been done along the line of fire protection. The Adirondacks have suffered from fire as severely as any other region in the country. The hardwoods have suffered from these flagrant fires as well as the conifers, as the two are always found in mixture and there are now forty-nine fire towers connected up by telephone, maintained and operated by the state conservation commission. This fire protection service, along with the reforestation, has the hearty co-operation of the lumbermen of the state. Already about 3,500 acres have been planted up to new growing timber.

The reforestation and fire protection policies of the state have been strongly endorsed by the Empire State Forest Products Association, composed of all the lumbermen and paper pulp interests of the state. This organization is also very active in favor of repealing the state laws which prevent the cutting and utilization of any timber on the big state reserves. Even mature or decaying, or even fire-killed timber, cannot be lawfully utilized, according to an old constitutional provision. It has been estimated that a revenue of from \$1,000,000 to \$1,500,000 could be annually secured from the present state reserve area without impairing its productivity and value for future forestry purposes. These reserves contain some of the finest hardwoods and coniferous timber in the Adirondacks and it is expected that they will be handled for the production and utilization of timber in the same way that the big federal national forests are being managed in the West. They would also furnish material for the mills which, sooner or later, will have to go out of business from lack of logs.

It is in the closer and more intensive utilization of the products of the forest, however, that the lumbermen are mostly interested, and as successful examples of complete utilization may be found with the Adirondack hardwoods as in any other forest region in the country. Moreover, conditions are very favorable to specializing in hardwood products and to the utilization of practically all the slabs, trimmings, edgings and even sawdust, which in many operations are conveyed to the burner. These conditions are as follows:

- 1. Proximity to the most densely populated section of the country.
- 2. Good transportation facilities.
- 3. Excellent markets for all kinds of products.

1. Development of varied wood using industries to did, eather wise waste products, such as wood alcohol, furniture, cooperage, slace last, novelty, broom handle, dowel, vehicle and handle stock plants.

The recent co operative study of the wood using monstries or New York carried on by the New York State College of Polestry at Syracuse at the Leep States Points See, a very interesting facts, among which are that New York is the greatest wood consuming state in the Union and it is a leader in the box board, excelsior, wood pulp, music instrument, gunstock, turniture and shipbuilding industries. During the year 1912 the investigation showed that over 1,550,000,000 board feet were consumed in the wood-using industries of the state. These eagerly center around the Adirondack region, the lumber centers of Buffalo, tre Tonawamaas, New York City and Jamestown, which is a great form ture and veneer point. Connected with several of the Adirondack in I good mil's are many specialized industries, such as shoe last, namely, who so ke the otherwise waste products of beech, hard maple, buch, basswood and red cherry for their raw material. Very little sawoust goes to waste, for it finds a ready market for packing purposes, stable ledding, storing of ice, especially in the big ice houses along the upper Hudson river, mattings, etc.

Baltimore Exports Gain

The curtailment of lumber exports through Baltimore, which had become very pronounced for several months, seems to have been checked, and for the first time since the beginning of summer the month of September showed an increase in shipments as compared with the corresponding month of last year. The gain, taking mere totals for September last over September, 1912, was somewhat more than 100 per cent, but account must be taken of the fact that a considerable part of the increase is on the score of West Virginia spruce shipments to South America, which are occasional and make up nearly three-quarters of the increase. There was a falling off in the forwardings of hickory and oak logs, the classification "all other logs" also exhibiting a blank. A slight reduction in the shipments of oak lumber is likewise to be noted, while poplar and "all other" lumber made a material gain. The general tendency appeared to be in the direction of an expansion of the exports, and it is thought that the low ebb of the foreign movement has been passed. The comparative figures are as follows:

	Feet		Feet	
Qua	antity.	Value.	Quantity.	Value.
Hickory				
Logs, Hickory			6,000	\$260
Logs, Walnut	25,000	83,816	75,000	3.727
Logs, Oak			20,000	620
Logs, All Others			30,000	850
Lumber, Oak		62,097	1,586,000	52,397
Lumber, Poplar 33	55,000	15,841	133,000	5,707
	39,000	10,300	98,000	4.203
	1,376	1.514	1,999	2,025
	21,363	1.930	7,163	475
Staves		3.600		4,559
All Other manufactures of the second		2.675		2,004
Durmitute		1,214		316
		30.610		24,048
All other manufactures of wood		.507,6110		- 1,040

The total of all exports for September last is \$211,140, against not more than \$104,823 for September, 1912, but, as has been explained, not less than \$71,328 of this is on account of spruce lumber, which is shipped only occasionally and of which several shipments may happen to fall within one month, thus materially swelling the total of exports without making the increase of real significance in sofar as the export business generally is concerned.

About the best way to keep from being a slave to your business is to be master of it.

Even a "hot air" brand of politeness is better than none.

A reputation for furnishing good lumber is worth a lot more in the market than a reputation for furnishing cheap lumber.

Sometimes a furniture manufacturer hopes to save money by seeking a lower grade lumber for his work when the true route to economy is really by way of the upper grades at higher prices.

The Red Gum Situation

Editor's Note

The following paper was contributed by Herbert E. Summer of the Summer Lumber Company, New York City, at the meeting of gum manutacturers which took place at Memphis, Tenn., on Saturday, October 18. The purpose and accomplishments of this meeting are described in detail in another part of this Issue of Hardwood Ricogo. Mr Summer's talk point out various logical reasons why red gum is in the position if occupies today.

The writer regrets that conditions over which he has no control have not permitted him to attend the meeting of the red gum manufacturers in Memphis on October 18.

As no doubt all the manufacturers know, the writer has been a strong advocate and booster of red gum ever since it was put on the market, and, of course, any discussion to help along the sale of same is naturally of interest to him. The questions that are set forth in the call for the meeting, under date of October 11, are of special interest.

The first-why has the market eased off?

In the following, bear in mind, that the writer speaks only of the conditions that exist in the eastern states. The consumers are principally the trim manufacturers, the furniture manufacturers and the piano manufacturers. The trim trade is at a standstill. This statement can be confirmed by anyone who knows the conditions, or has traveled through either New York state or Pennsylvania, and is especially marked in New York City. The furniture manufacturers are fairly busy, but inasmuch as they have no prospects ahead of two months or so, they cannot be induced, except at especially low prices, to invest in any lumber. The piano manufacturers seem to be working full time, but they, too, will not buy ahead of their requirements, so that it resolves itself down to the fact that red gum is in pretty much the same condition as other hardwoods, although there are one or two other conditions that probably make it the slowest mover today.

The basis of these conditions go back to the last flood. When the first report of the flood at Dayton was heard a great deal of stock, as all of you gentlemen know, and principally the red gum in the lowlands section, was immediately put on wheels and shipped without orders to the various consuming sections. The consuming manufacturers at that time had really a large stock on hand and while they were not interested in buying in large amounts they took in some of the stock and, of course, the balance of it was stored. In the summertime they started to use the first of this consignment of stock, and at just that time the other manufacturers of red gum were again offering stock for sale. In the early fall busines fell off and there was no volume of busines to speak of. As a consequence, manufacturers began to offer their stock at lower prices. With this drop in the market and with no special pressing need the buyers grew conservative and decided they would not invest until they knew exactly what conditions were.

Today an enormous volume of red gum is being offered by the manufacturers. There is a much greater volume being offered than is really on hand, for the reason that one stock sheet received in a big center by say ten wholesalers is copied and sent out broadcast by each of them. As a consequence there is ten times the actual amount offered from one mill and a buyer in one city will get at least five stock sheets. Now this, coupled with the stock sheets and offers that are coming in from the mills direct, as well as from wholesalers in other cities, gives a buyer the impression that gun isn't selling at all, and that he can get it at his own figure later on. You will no doubt be surprised to know that firsts and seconds red gum is being sold as low as \$37.00 on a Philadelphia rate of freight by Louisiana mills, and by car shipments. Even at this price, some consuming manufacturers are buying in only limited quantities, believing that there is to be a still further decrease in prices.

Now, you ask the question, "What is the remedy?"

No amount of advertising or any other sales work will under these conditions be of any use; money would be only wasted while these conditions exist.

The underlying conditions are as follows:

People are not buying luxuries in the face of the present times and are buying only actual necessities. This affects the piano and

the furniture industries. Real estate at this time is a drug on the market for the reason that it is a slow asset, and at this time money is not plentiful. This affects the trim trade. Then, too, the investment market today offers on the best securities a six to seven and one-half per cent return on the money invested, and offers as well the chance of making a good deal of money in buying at the present-day prices which, as you all know, are very low in comparison to what they have been. There is no question but that in the adjustment of conditions the feeling of confidence that will grow when legislative matters have been settled, will strengthen gradually. The investment market will go up and from the profits realized thereby the public will again have money to put into real estate and into the luxuries which in turn will affect the real estate business, the trim business, the furniture business and the piano business, which industries, as you know; constitute the bulk of the consumers of red gum.

While there is no question but that underlying conditions are absolutely sound, at the same time there is not the feeling of confidence today that there will be in the spring, by which time the effects of the tariff, currency bill and other legislative factors will have been felt.

Lumbering in London

The largest city in the world would naturally be the last place to look for logging operations, including the felling, conversion, and selling of trees; yet a recent issue of the Timber News, published in London, gives some interesting facts on the subject of timber-cutting in that great metropolis.

In the first place, the city includes about 118 square miles, and it is not solidly built up. Vacant lots and squares contain venerable trees, some of them centuries old. As building operations are extended it becomes necessary to clear this land, and the trees are sold to operators who cut and remove them. Rather large quantities of logs are occasionally secured in this way. Oak predominates, but a recent sale included trees of Lebanon cedar planted centuries before.

It might be supposed that very high prices would be paid for timber in the heart of London, particularly when trees are sound and of large size; but such prices are not realized. A lot of seventy oak trees "of hard, clear timber," sold for about fifty dollars, board measure, per thousand; and the Lebanon cedars, one of which measured over 1.000 feet, brought only \$18 a thousand. There was a reason for the low prices. Timber buyers are strongly prejudiced against city trees, because experience has shown that such trunks are liable to contain all the way from a pound to a keg of nails, spikes, and bolts that have been driven in for various purposes during the last few centuries; and sometimes little good lumber can be cut from trees which have an outside appearance of being perfect.

Correction in Article on Eucalyptus

In Hardwood Record of September 25, 1913, page 24, in Mr. Tiemann's article on eucalyptus, a typographical error occurred in the sentence: "The rate of growth of manna gum at the Santa Monica experiment station is at best hardly two-thirds that of blue gum, although it is reported to exceed the latter in the Hawaiian Islands." In this sentence, "manna gum" should read "red mahogany." There has been some discussion in California as to the relative merits of the two species in question, and the sentence, as originally printed, might lead to a misunderstanding.

Knowledge is power only when you can use it—without use it is more like dead timber—likely to decay.

Drying Plain and Quartered Oak

The man who would do thorough and scientific dryn₂ of oal, lumber for cabinet or millwork must make it a point to separate his plain oak from his quartered oak.

With the upper grades this is commonly done in the process of grading so that it is easy enough to keep and handle it separately in drying if one would but just think about it and provide for it. Sometimes in the lower grades plain and quartered oak is mixed, and sometimes a plain oak board may have a quartered strip along one edge of it. This makes a bad combination for proper drying,

Opinions and results of experiments on drying plain and quartered oak differ because of different local conditions and viewpoints, but all who have experimented with thorough drying such as should be done for cabinet and millwork know there is quite a difference between drying quartered oak and plain oak. One manufacturer who makes a product calling for practically bone-dry stuff, and works both plain and quartered oak, says that it takes him just about three times as long to dry quartered oak as it does plain oak. The drying is done in the same kiln, but not at the same time unless he can arrange to get what plain oak he has to dry on the first truck so that it can be taken out when it is dry and the quartered stock left in. To mix a few plain oak boards in with the quartered stock means that they will be honeycombed and ruined in the process of drying.

When the plain and quartered oak is dried in the same kiln some difference is made in the temperature, but the main difference is in the time and the amount of moisture. More steam, or rather more moisture, is used in the drying of plain oak and the drying is done in practically one-third of the time that is required to dry quartered oak.

It is easy enough to understand that it takes longer to dry quartered oak than it does to dry plain oak and that the two should not be mixed together and dried at the same time. The explanation of why this is may not be so easy for some to understand, and yet it is logical enough. The splash lines in the quartered oak prevent the moisture escaping freely through the sides of the boards and because of this the moisture must be gotten out mainly through the edges and ends of the boards. Experiments have shown that it takes considerably longer to dry wide stock in quartered oak than it does narrow stock, which is proof enough that quite a percentage of the moisture is taken out through the edges. In plain oak the splash lines run through the thickness of the board and the moisture can be drawn out through the sides and the ends instead of through the edges and the ends as is the case with the quartered oak. The annual rings of growth with the hard and soft streaks are not the same check to moisture that the splash lines prove to be, consequently the drying can be carried on much more rapidly, and while in every case it may not be accomplished in a third of the time on plain oak that is required on quartered oak, in every case where thorough drying is accomplished it will be found that the plain oak can be dried easier and quicker than the quartered oak.

The moisture-resisting nature of the splash line in quartered oak is well attested by the fact that in making staves for whiskey barrels this is one of the important points taken into consideration in inspecting and grading the staves. A really good stave must have three splash lines showing in its thickness extending through it from edge to edge, and all of them must be so that there is no chance for moisture to work in between two splash line figures on the inside and reach the outer surface of the staves. It is the splash line in the white oak staves that prevents the alcohol from penetrating and keeps down the loss from evaporation. Naturally if it will do that it is a pretty strong check against the driving out of the native moisture of the tree through the sides in driving

Those who just reduce oak lumber to shipping dryness or to what may be ealled fairly dry may not fully appreciate the distinction made here between drying quartered and plain oak. Many of

them, too, may not understand fully the difference between getting oak lumber fairly dry and getting it thoroughly dry.

It is perhaps safe to say that ninety per cent of the troubles in mill and cabinet work with swelling and shrinking and warping are due to lack of thorough drying. Many people do not seem to realize that most of the shrinking of oak lumber is done after it passes the fairly dry stage-between that and the thoroughly dry stage. This is true of other lumber also, and it is one of the things that gave the manufacturers of oak flooring a great advantage over those of pine flooring. When manufacturers of pine flooring think they have finished their drying they have just about reached the stage in the drying process where the manufacturer of first-class oak is beginning to do serious work. The manufacturer of high-grade oak flooring realizes that if he would have his stock fit snugly and not show those unsightly cracks that spoil a finished floor, he must get his lumber so dry that there is no more moisture in it. He soon learns, too, that to stop drying just a little too soon will spoil the quality of his flooring because there is a greater percentage of shrinkage to the amount of moisture taken out in the final stages of the drying than during any other period.

This is the point that some manufacturers of flooring stumble over and thus injure the flooring business, not merely by the process of cheapening the product, but mainly because they deliver to the public a finished product not thoroughly dry, that will afterward do enough shrinking to make it unsightly and to give the oak flooring business a black eye.

This same shortcoming is noted in cabinet and planing mill work, perhaps much more of it than many suspect, and certainly considerably more than there ought to be. To make up and finish good cabinet or millwork today calls for so much investment in the way of raw material cost and work bill that the effort should not be wasted and the result spoiled through a lack of thoroughness and efficiency in drying. The drying process should be made thorough and complete. This should be the first consideration, and then there are various other facts that enter, such as drying to prevent undue checking and to guard against unnecessary hardening of the wood in the process. To get these and the other things as they should be the first step in the process of drying oak is to separate all the plain oak from the quartered, and wherever practical, use different kilns for it or the same kiln at different times. If it becomes necessary to put both plain oak and quartered oak in the dry kiln at once keep the plain oak to itself at the front so that it can be taken out when it is dry.

It would not be a bad idea in drying the quartered oak to assort it with the wide stock separate from the narrow strips and so arrange it as to give the wide stock longer time in the kiln. This is not so imperative as the matter of separating the plain from the quartered, but it is a point worth keeping in mind and experimenting with when there is an opportunity J. C. T.

Weeds and Woods

Emerson defines a weed as a plant whose virtues have not been discovered. This definition will apply with equal force to our so-called inferior woods. If the properties of every wood were fully known and then each kind were employed only for the purposes to which it is naturally adapted the drain on our forests would be materially lessened.

Another definition of a weed is that it is a plant misplaced. Dandelions on well-kept lawns are a pest but cultivated in our gardens they become a vegetable of considerable worth. Some woods with positive merit when employed alone are a source of trouble when mixed indiscriminately with better kinds. In the employment of such mixtures in construction the factor of safety called for by the specifications must be large enough to cover the weakest wood, thereby involving a waste of the better kinds which we can least afford to waste.

🔆 Is the Platform a Good Investment? 🔆

A lot of hardwood men, especially those who are in the wholesale end of the business, shy at the idea of putting money into equipment as rapidly as a colored gentleman of dice-rolling proclivities does at the mention of the police. He simply can't accustom his mind to the idea that such an investment can be made to pay dividends, but keeps insisting that he wants to put all of his money into lumber, where it can be turned over rapidly and made to produce profits in proportion.

For this reason the number of yards which are being operated without platforms probably constitutes a majority. Yet there are plenty of yards where platforms prevail, and where the owners have found, according to their own statements, that they can be made not merely a convenience, but actually a big asset in the operation of the business. They ought to know, and consequently their testimony on the subject, though to a certain degree prejudiced, ought to be accepted as worth something.

Taking up first the points against the platform, that of initial expense is the chief item. It costs a good deal of money, depending on the size of the yard, to equip it completely with platforms, both material and labor entering into the proposition. The money that is spent in this way has to remain there permanently, and there is no way of getting it back except by experiencing advantages in the use of the platform.

On the other hand, however, the fact that hand-trucks can be used almost if not quite exclusively, means that an investment in horses and harness, not to mention expenditures for stables, feed, etc., can be wiped off the slate. Some live stock is needed, ordinarily, for handling lumber to other yards and to local consumers; but the number of horses needed is extremely small contrasted with the size of the string which must be maintained when horses are used for trucking work.

The cost of maintenance is a serious point in the argument against platforms. The work of replacement must be begun in three or four years after the platform is built, and after that, in the experience of most lumbermen, a man must be kept busy most of the time putting in new planks and keeping the platform in good shape. This is a considerable item of expense, and one of the chief factors that can be lined up against the use of a platform.

But this expense is almost certainly overcome by the saving that is made through the elimination of lost time which accrues when men are kept waiting for the arrival of the trucker. One can see dozens of instances of this loss in walking through any wholesale yard where a lot of business is being done. The truck may be filled and ready to move, but in most instances the horse is not immediately at hand, and the time of everybody is lost while the movement of the lumber is being held up.

The increased labor needed to get lumber into and out of a car when the floor of the car is several feet above the level on which the yard crew is working can also be easily figured. It may seem as though no time is being lost in handling the stock, but the very fact that greater physical exertion on the part of the men is necessary means that they are not as fresh at the end of the day, and their movements are less rapid, than those of lumber handlers who have not been compelled to work against gravity to the extent of the others.

While three or four men are needed to handle a truck loaded to its full capacity, the quickness with which they can dispose of the work keeps the absence of horses from being noticed. And, as indicated, the work moves forward without loss of time, because there is no waiting.

There is a particularly marked advantage for the lumberman when stock is being handled from one car to another. The speed with which this can be accomplished is really remarkable. But, as pointed out above, the men are not working against gravity to the extent that is observed when the lumber must go down from the car to the truck, and then up from the truck into the other car.

It takes more labor, and likewise more time, which is another way of saving more money.

Even in the best of yards where no platforms are used, the alleys get in bad condition and it is difficult to work in them in the winter time, especially after a rain or snow. The job of hauling lumber around under those conditions is difficult and expensive. The use of a platform gives the men a dry place to work at all times, and there is never any loss of time after a rain; the men can work just as easily as before, and are not incommoded by having to wade around in the nucl.

This and other points which have been mentioned relate largely to the comfort of the men employed in the yard. From this it might be assumed that the platform was devised as a humanitarian proposition, intended to make the work of a crew of lumber hustlers easier than before. This was not the reason; but at the same time the fact that men can be more comfortable and can do the same amount of labor with less expenditure of effort is ample proof that the work is being done at less cost. The tired laborer cannot achieve as much as the fresh one, and the man who has to put forth effort that his competitor is not called upon to produce is going to show it in his work before the day is over.

The yard which uses a platform to best advantage is one which has a good deal of car-to-car business to handle, for, as suggested above, this is one of the places where the advantages of this kind of equipment make themselves most manifest; while the handling of inch lumber can be better managed with a platform than when thicker stock forms the bulk of the lumber which goes through the yard. The heavier stock cannot be trucked by hand to as good advantage, and the use of a platform consequently appears to best advantage when inch lumber predominates.

Perhaps in an extremely large yard hand-trucking would be out of the question, on account of the length of time taken, and because three men would be tied up instead of only one man and a horse. Here it is the same question as to the use of motor trucks in general business; in long hauls they show to best advantage, while short hauls, with many stops, prevent them from making a good record under most conditions.

In the same way the yard which is not too big and has no extremely long hauls can use platforms with obvious benefit, while it is doubtful if a good showing could be made in a yard covering an unusual area and involving hauling through exceptionally long alleys from the car to the stacks, and vice versa.

"We have been using platforms in two hardwood rehandling yards," said the manager of a well-known concern, "and we have found them an advantage. Whether other people would experience the same results is a question. I may say, however, that we handle mostly inch lumber, and that this class of stock seems to work in better than when thicker, heavier lumber, or long timbers must be taken into account.

"The advantage of having the men on dry footing all the time is not to be discounted. It improves their tempers, for one thing, and results in more and better work being done, for another. I believe there are fewer delays in the yard where hand-trucking is the rule than when horses do most of the work. We seldom have men tied up waiting for something to do, but can keep the work moving without interruption. We think a good deal of this is due to the use of the platform, though in this we may be mistaken.

"All in all, however, we regard the proposition as a good investment; and while, if we were able to convert the money spent in building and maintaining the platforms into cash, it would be a temptation to do so, I am sure that we are not likely to try to get along without them under present conditions."

G. D. C., Jr.

Floods follow forest denudation, and the disasters of this year can be traced in part, at least, to non-forested watersheds. It is much easier, however, to explain why these things happen than to discover a way to keep them from happening again.

Some Fence Post Figures

The annual bill for fence posts in the United States is a large item. No ceasus has ever been taken by which the actual number is shown. From the nature of the case that is impossible, because probably not more than half of the posts used are bought and sold in markets. Many farmers cut on their own land what they need, and no account is kept and no report made.

A careful estimate is as much as can be expected. The government report for lowa, furnishes the basis of such an estimate, for lowa is a farming state, a large user of posts, and the ratio per acre there can be applied to the farmland of the whole United States, with certain allowances. It is shown that the farmers of that state use in round numbers 10,000,000 new posts every year in repairing and building fences, and that the cost of the posts is \$1,400,000, with \$600,000 additional for setting them. That is a round sum of two million dollars a year.

The population of Iowa compared with the whole United States is as one to forty; but the ratio of farming population is nearer one to twenty, since Iowa is preeminently a farming state. Assuming that as a basis for estimate, it is found that the United States demands 20,000,000 new fence posts a year, at a cost, set in the ground, of approximately \$40,000,000.

The average life of fence posts in Iowa is stated to be fourteen years. There is, however, great difference in the lasting properties of different woods. Osage orange lasts five times as long as willow, and in length of service it heads the list of post timbers in that state. The comparative life of other post timbers in Iowa is shown in the following list, ranging from the longest to the shortest: Red cedar, locust, white oak, northern white cedar (arborvitae), catalpa, black walnut, butternut, red oak, willow.

In this list red cedar is most expensive and willow cheapest. That rule would not hold everywhere, because the cost of posts in

different regions varies. Where a timber grows and is plentiful, it is cheap, but it might be expensive where it does not grow.

It may be a matter of surprise that catalpa makes a poor showing as a post timber in lowa. It was once advertised as the coming tree that was to end most of the farmer's timber troubles, and no man knows how many thousands were planted in the Plain states; yet in the supply of posts in lowa, the wood falls short of one per cent; white oak exceeds forty per cent; even black walnut furnishes more posts in that region than catalpa, and butternut is also above it.

If the Iowa ratio of round to split and sawed posts holds throughout the whole country, it means that more than half of all are used in the round. They are cut from young trees, too small to split or to pass through a sawmill.

The round post when cut from most woods is peculiarly subject to decay. That is because it is largely sapwood, which is not durable. The cutting of young trees for posts, and using them without preservative treatment, is wasteful. Such trees usually make no more than two or three posts each. Preservative treatment will greatly lengthen their period of service.

Black walnut is generally classed as a durable wood, and that reputation is well founded when heartwood is used; but small, round walnut posts decay in a very short time. It is because such posts are almost wholly sapwood. Little heartwood forms in walnut until the tree attains considerable size. Even if the wood were durable its use for fence posts would be of doubtful economy, because of its greater value for other things.

Six board feet of lumber as the equivalent of an average fence post is a low estimate, but at that the annual cut of posts in the country equals 1,200,000,000 feet, board measure, or about three per cent of the total sawmill output of lumber.

Iowa's Wood-Using Industries

A pamphlet of nearly one hundred pages has just been published by the Iowa Agricultural Experiment Station at Ames, showing the uses of wood in that state for manufacturing purposes. The statistics were collected and compiled by John T. Harris, statistician of the United States Forest Service, for the year 1911, and the report was printed by the state, with a chapter on the timber resources of Iowa added by G. B. Macdonald, state forester, and another by Nelson C. Brown on the white pine in Iowa.

Iowa is essentially an agricultural state, about ninety per cent of its area being taken up with more than 217,000 farms. Probably one-fifth of the state was forested when white men first reached it, the principal growth being along the rivers, though the forests often reached back many miles into the prairies. The finest sycamore, walnut, and oak were soon cut and timber of that class has almost disappeared; in fact, today practically nothing of the original forest remains. Much timber has been planted, however, some as woodlots and some as windbreaks and shelterbelts.

Most of the material obtained from Iowa forests goes to supply the ever increasing domestic needs of the woodlot owners, and is not accounted for in this report of the annual consumption of wood for factory products. Iowa still produces timber, but by far the greater part of the wood used by manufacturers comes from the outside. The state's wood-using industries are important, and Iowa's forestry department is giving more attention to plans for protecting and further developing such valuable assets as the woodlot and the industries depending on wood.

In quantity the white pine used by Iowa manufacturers equals nearly any four other woods. In price per thousand feet it is exceeded by twenty-three species. The highest average price paid for

any species was for 5,000 feet of Circassian walnut at \$300 per thousand. The cheapest was black willow at \$14. Compared with prices in most other regions no very cheap wood is used in the state. Some of the states which buy lumber for manufacturing purposes at a lower rate than Iowa pays are: Missouri, one wood; Arkansas, ten woods; Michigan, ten; Tennessee, twelve; and Louisiana and Mississippi, nineteen each. The average price for the entire quantity of wood purchased by Iowa manufacturers was considerably above the average in most states. This was because Iowa is not in a timber region and also because the kind of manufacturing carried on demands a good class of raw material. Still another reason for the high cost of the wood may be found in the fact that much of it is bought in rather small amounts and retail markets are patronized. The woodworkers of Iowa are not generally in the business for the purpose of working up and disposing of an abundance of material that is seeking a market, but rather to supply a market which is active in its demands. Iowa manufacturers of wood products sell largely to home people.

Less than three per cent of the lumber and logs used grow in the state. Iowa is an interesting battleground between the southern, western, and Lake states manufacturers of lumber, and is so situated territorially that it receives competitive bids from regions on all sides. It draws from a wide range of species. Freight rates from the extreme West to Iowa are not prohibitively above rates from the extreme South. The result is that very interesting competition has developed between certain species of wood for certain purposes. For example, though the average price of redwood in Iowa is about \$10 above the price of cypress, yet the California wood is so easily handled in the factory and is so free from defects that many estab-

lishments are willing to pay the difference in price. Redwood makes a very attractive appearance in a number of commodities, such as dairymen's and apiarists' supplies, tanks, silos, and general mill-work. Possibly the western sawmill men are shipping into the state a carefully selected stock, but however that may be, redwood is increasing in favor even with the heavy handicap in price. The quantity of cypress bought in 1911 by Iowa manufacturers, however, was nine times that of redwood. In the same way, Douglas fir from Washington and longleaf pine from Louisiana meet in active competition in Iowa woodworking factories. The southern wood is purchased in considerably larger amounts, but the fir is higher in price, and there is not much difference in the total cost.

Though from a lumbering standpoint, Iowa is properly classed as a non-producing territory, probably twenty-five per cent or more of the raw material it consumes reaches the factories in log form. This is due to the fact that Minnesota forests supply a large amount of the pine by rafting it down the Mississippi to the large manufacturing establishments at Davenport, Dubuque, and Keokuk. One establishment alone receives annually 18,000,000 board feet in log form. These mills, however, which depend on the rivers to bring them logs from the northern forests, report a gradual decrease in the supply of logs in recent years. The falling off in river shipments is due to the activities of the railroads and to the diminution of the accessible timber immediately on the water fronts about the upper Mississippi and its principal tributaries.

Though Iowa supplies its factories with less than three per cent of the wood they use, there is in the state an up-to-date sawmill running regularly and sawing daily 125,000 feet of logs. This shows that the prairie area is a good consumer of raw material in its roughest form. The owner of this large mill reports that he has a great advantage over mills located a long distance from the centers of population when it comes to disposing of waste material, such as slabs, sawdust, odd lengths, and inferior low-grade lumber. In the prairie districts all such material can be disposed of at more or less of a profit, for kindling if for nothing else, but in lumbering districts proper it finds few buyers, and most of it goes to waste. It can be made profitable, therefore, to transport logs long distances in order to reach a market for what would otherwise be waste.

The state of Iowa is making rapid progress toward caring for and developing its natural timber resources. The Iowa State College of Agriculture and Mechanic Arts at Ames is well equipped for and is carrying on a large number of experiments for the guidance of those interested in forestry, in anticipation of a time when the region must depend upon itself for a large part of its timber. There are a score or more of important manufacturing centers, including Des Moines, Dubuque, Davenport, Keokuk, Cedar Rapids, Sioux City, and Clinton, each of which has a number of large wood-working plants which claim to be in a position to compete successfully with establishments in remote but heavily-wooded districts. It is claimed that the cost of shipping the raw material in the rough form is more than offset by the closer utilization possible around cities situated in the non-timbered belts. The Mississippi is a great aid in cheap transportation from the North. Contemplated locks and dams to be built between Iowa and Illinois by the federal government, should add much to the stream's value in that respect. It is further anticipated that the development of water-power, now in process, will greatly stimulate manufacturing.

The table which follows shows the woods used, the annual amount of each, and the average cost.

SUMMARY OF KINDS OF WOOD USED IN IOWA

	Quantity used	Average
	annually	cost per
Species—	Feet b. m.	M feet
White pine	. 74,254,888	\$28.63
Shortleaf pine	. 20,228,869	29.05
White ash	. 19,827,442	28.09
Longleaf pine	. 19,720,700	28.04
Cypress	. 16,961,472	31.50
Douglas fir	. 15,873,300	33.58
Norway pine	. 12,643,175	24.31
White oak	. 10,861,350	46.86
Red oak	. 8.546,600	45.98

Western yellow pine	7.384.000	42.10
Red spruce	6,520,300	31.71
Red gum	4.845,690	23.70
White elm	4.792.527	27.67
Yellow and sweet birch	4,495,500	30.47
Hemlock	4.327.000	23.13
Jack pine	4,250,000	18.59
Cottonwood	3,985,122	24.13
Sugar maple	3,949,000	33.96
Hickory	3,624,500	53.01
Basswood	3,237,040	26.88
Chestnut	2,736,000	21.93
Yellow poplar	2,655,400	52.57
Tupelo	1.819,632	17.68
Redwood	1.750 200	42,20
Sugar pine	1,019.500	45.06
Loblolly pine	530,100	27.45
Western red cedar	500,000	20.00
Tamarack	354,300	24.98
Butternut	123,200	35.02
Balm of Gilead	SG 000	17.22
Northern white cedar	\$5,000	70.00
Sycamore	78,000	16.03
Mahogany	72,400	155.55
Hackberry	70,000	15.36
Western white pine	70,000	39,29
Red cedar	69.500	32.20
Western larch	48.000	29.00
Spanish cedar	40.250	120.00
Black willow	40.000	14.00
Black cherry	25,000	44.96
Black cherry	25,900	44.90
Aspen	25,000	15.24
Osage orange	15.000	125.00
Black walnut	11,500	70.70
Circassian walnut	5,000	300.00
_		
Totais	62.596,757	\$30.92
Less than three per cent of this wood was a	recorn in To	wa. The

Less than three per cent of this wood was grown in Iowa. The other was gathered from the four points of the compass, and from hundreds of miles and in some instances from thousands of miles,

The working of wood in the state is divided into twenty-three principal industries, and a group of minor industries tabulated as miscellaneous. Iowa clearly belongs among the states where woodusing industries are diversified. For comparison, it may be shown that Louisiana has only eight industries to lowa's twenty-three, but Louisiana's annual use of wood is five times that of Iowa. Though the state's wood-using industries are diversified when compared with some regions, it falls short of others. It is much behind Missouri in that respect, and much further behind Illinois, the two states on the south and east. It has less than half the number of industries of Illinois and it uses only one-seventh as much wood as raw material. The table which follows shows the industries, the amount of wood demanded yearly by each, and the average price paid by each for the wood bought as raw material.

SUMMARY OF WOODS USED BY INDUSTRIES

THE MARKET OF THOODING COED BY TADESTRIAN	
Quantity used	Average
annually	cost per
Industries— Feet b. m.	M feet
Sash, doers, blinds, etc	\$37.39
Planing mill products	29.60

According to the best available figures, the timbered area of Iowa amounts to 2,500,000 acres, or approximately seven per cent of the total area. The timber is almost exclusively of the mixed hardwood type. The species of most importance are the white oak, red oak, bur oak, yellow oak and swamp white oak, the pignut and bitternut hickories, white and green ash, black walnut, basswood, white, red and cork elms, cottonwood, black willow, hard and soft maples, sycamore, hackberry, honey locust and coffee tree. The valuable oaks and the walnut were cut especially heavy at an early date. Among the conifers two species have been found in commercial quantities in Iowa, white pine (Pinus strobus) and red cedar (Juniperus virginiana). The very limited occurrence of balsam fir (Abies balsamea) is only of botanical importance. Small stands of the pine occurring in the northeastern part of the state were early lumbered. The range of the cedar extends to all parts of the commonwealth. Valuable stands which were found along the Cedar and Iowa rivers were early ex-

The average woodlands of the state are producing only about thirty per cent of their possible output of wood products. With little or no protection from fire or stock, the native timber is reproducing poorly, and many stands are characterized by the absence of young growth.

From early times Iowa has been active in planting timber. The woodlots in most instances were for providing shelter, fuel and repair material. In few cases were the plantings made for strictly commercial purposes. In 1863 the state census reported a total of 8,360 acres in planted groves and woodlots. In 1867 this area had increased to 14,128 acres; in 1875 to 65,549 acres; and at the present date the estimated acreage in planted timber is 210,000 acres. The first plantations were composed of the rapidly growing species, cottonwood, white willow, soft maple, and ash. Many of these groves have matured and have been harvested. The cottonwood especially has given very satisfactory returns, when given reasonable protection and care. At the present time the farm plantations are being set out largely for the production of fence posts since there is a steady demand for this product from all quarters of the state. The hardy catalpa is the species most planted for this purpose, although failures are common when the tree is planted in poor soil or out of range.

White pine is recommended for planting in Iowa as shelterbelts and for lumber. Some plantings have shown good results. The tree is found as a native species throughout the northeastern portions of the state. Its extreme western limit is along the Iowa river near

Steamboat Rev., S. Hae, a county, where so call large trees recently cut for lumber. It also occurs south along the Mississippariver to Muscatine county. In the past it has been so beavily lumbered in the clearing of land for agricultural purposes that it now occurs only as a fugitive tree throughout the native forests of the bluffs of the Mississippa and along the streams and steep slopes of the northeast counties.

Outlook Around Memphis

There has been some rainfall in the Memphis territory during the past few days, but this has not been heavy enough to interfere with work in the woods, which has made very satisfactory progress. The amount of timber prepared for shipment since the beginning of the new business year has been quite large and the radroads have been moving all offerings with more than usual readness, with the result that the mills here are in very satisfactory condition with respect to log supplies. The hardwood market is gradually broadening and the large receipts of timber are regarded as quite favorable as the view obtains that large production will be necessary to take care of the increasing needs of the trade. So far there has been little accumulation of dry stocks, and members of the trade realize quite fully that it is up to them to prepare for the needs of the future before the unfavorable winter weather makes itself evident. This view of the situation is largely responsible for the unusual activity in logging work, as well as in the operation of the mills in this city and section.

The car situation has become a little more acute at outlying points in Mississippi, Arkansas and Louisiana, but as a general proposition it is far better than the average for the past few years. The Southern Hardwood Traffic Bureau says that it is receiving a number of complaints from out-of-town centers, but it is notable that local lumber manufacturers are having comparatively little trouble in getting empties or in having these moved after they have been loaded. The height of the cotton movement will be reached during the next four or five weeks, however, and as the crop in this section is very large, it is expected that some shortage will develop and that there will be some delay in the handling of traffic offered the various roads. Receipts of cotton at Memphis during the week just ended broke all records for this time of the year and indications are that the amount of cotton moving in the immediate future will tax the capacity of the roads to an unusual degree. But, while the lumbermen are expecting some trouble, the opinion seems to prevail that the situation as a whole this season will prove much better than any recent year.

Official reports made public here indicate that during the first ten months of the current year building operations involved the largest total on record for the same period, practically \$5,500,000. This is a percentage gain of fifty-nine, which is also something of a new high record. This is the best showing made by any city in the South, not only with respect to the total involved but also with regard to the percentage increase. This showing is considered all the more remarkable in view of the heavy loss recorded for September. Building operations are active here now and the same is true of practically the entire Memphis territory, where the cotton crop is very large and where prosperity promises to perch her banner this season in a most conspicuous manner. Every indication points to large needs locally and territorially with regard to building materials of all kinds and handlers of these wares are shaping their plans accordingly.

Practical Men

Henry S, Graves of the United States Forest Service is inclined to grow satiracal in a recent bulletin which he published, and from which these quotations are taken:

"In a country of practical men occur forest fire losses of some fifty million dollars annually.

"In a country of practical men unsound forest taxation retards long-time forest management.

"In a country of practical men millions of acres of cut-over non-agricultural land remain unproductive.

"In a country of practical men a sound economic policy of forest and water conservation is still opposed."

These quotations are sufficient to cause a good deal of serious thought.

The Lumberman's Round Table

MAKING A LUMBER SALESMAN

"The trouble with most of our salesmen," said a well-known hardwood man, "is that they are salesmen first and lumbermen afterward. If they could only get the inside angle on the proposition and see the business as we see it, their work would be about one hundred per cent better. The trouble is that most of them never get down to the brass-tacks, practical question of what lumber to sell, and what stock can be made most profitable. Simply getting the order for anything on the stock-list, is as far as their ideas go."

This complaint, which seems to be founded on fact, suggests that the plan of the Carnegie Steel Company might be adopted by lumbermen to good advantage. This company brings its men to the mills at relatively brief intervals, has them study the processes of manufacture—and pass an examination on it—and produces technically trained men instead of merely salesmen. The result is that the sales are made right. The lumber salesmen would need to study things other than manufacturing details, but the idea is the same.

THE TRAFFIC MAN AN ASSET

A recent hearing of the Interstate Commerce Commission, involving advances on hardwood lumber rates recently imposed by a southern carrier, demonstrated a fact which has been commented on before—that the traffic man is a fixture in the lumber business because he has proved his value.

The representative of the railroad at this hearing happened to be a particularly shrewd, intelligent chap—brilliant, in fact—and he was able to trap the lumbermen who went on the witness stand into saying the wrong thing, or to show inconsistencies in their testimony, growing out of their ignorance of general rate conditions.

The traffic manager of one of the lumber companies, however, was more than a match for his adversary; and instead of allowing the railroad man to catch him napping, he actually scored several points by injecting a fact or two the representative of the earrier had himself overlooked.

The situation was not difficult to understand—the man had made a business of traffic matters, and he had mastered his subject. It is no wonder that the average lumberman appears to disadvantage when he goes on the stand, because he hasn't had time to make a business of traffic topics.

MEETING PANEL COMPETITION

Manufacturers of furniture which is made with solid tops instead of glued-up stock have begun to realize that one of the chief reasons why the trade prefers the veneered article is because of the regularity of figure and general uniformity of appearance which that character of furniture has when the face veneers have been matched up with even ordinary skill. Anybody with an eye for beauty can appreciate this, while there is something much more subtle in the satisfaction which comes from owning a piece which is "solid," instead of merely veneered.

This being the case, the wise maker of solid-topped goods is paying more attention to getting his lumber matched up. The matter of matching is difficult, of course, because the manufacturer has not the advantage which is experienced in the case of veneers, where the cuttings from the same flitch have been kept together; but still he can make a better showing if he tries than if he disregards the proposition.

This condition suggests that it would be worth the while of the manufacturer of dimension stock to keep together the product of the log as far as possible. If the dimension mill is run in connection with the sawmill, it ought to be practicable to keep the stuff running uniformly fairly well. This is done in the mahogany business, but running a mahogany dimension mill is easier from this standpoint because each log produces so much more lumber than one grown on domestic soil.

CHANGES IN FLOORING TRADE

A well-known hardwood flooring man predicted recently that one of these days tongue and groove flooring will be passé, taboo, and a lot of other undestrable things. He declared that his experience with that class of stock shows that it cannot be depended on to lie straight, no matter how carefully it was dried originally, how much pains were taken to lay it properly, nor how well it was taken eare of after it was put down.

"Take a look at this floor," he said, glancing at the hardwood that covered his private office. "That stock was picked out by myself, and as it was intended to be a kind of sample-room, it was put down as well as any that was ever laid. Sight along it and you will see the ridges where the pieces join. Why it has taken on even enough additional moisture to swell out of its proper shape is beyond me, as every possible precaution to prevent this was used.

"On the other hand, there is some straight-edged flooring laid down in another room of my offices, and it is as flat and beautiful today as it was when it was first laid. The proof of the pudding is in the eating, and after experiencing just what happens to the different kinds of flooring I have come to the conclusion that the days of the tongue-and groove variety are numbered."

KEEP YOUR OWN ACCOUNTS

A veneer man who is regarded as one of the authorities in the trade recently read a little lecture to some of his friends on the fallacies of using figures quoted by other people as the correct data for one's own work.

"My conditions are different from yours, and yours from the next man," he began. "For instance, I cannot cut rotary gum veneers as cheaply as the man who has a mill right at the edge of the forests where the gum trees grow. That makes a difference in cost at once, of course, and I would be foolish to assume that because his cost of manufacture is a certain figure, mine is likely to be that also.

"Again, if I am operating four veneer saws and another manufacturer is running only one, the chances favor my cost of production being less. The greater the volume, usually the lower the cost, and that is as true of the veneer business as it is of others.

"The whole situation proves that the man who wants to know how much it costs him to make veneers must get down to the work of figuring on his own mill. He can't stop when he finds out how much it costs somebody else, because he is working under an entirely different set of circumstances.

SIZE VERSUS PROSPERITY

"'You're carrying a lot of lumber in stock and have a larger yard than you did three years ago," remarked a friend to a hardwood lumber manufacturer recently; "I hope you are making money in proportion to your increased operations."

"On the contrary," returned the lumberman, smiling a rather wry smile, "I'm making a good deal less."

Asked for an explanation, he pointed out that more yard room and more lumber mean a greater capital investment, and require more money with which to carry on the business.

"When I had a small yard," he said, "I was often pressed for room, and exerted myself mightily to move lumber in order to make a place for carloads that were on the way. The result was that I did a relatively big business with a relatively small capital investment. My turn-over, as the dry goods people say, was exceedingly rapid for a sawmill and wholesale operator.

i'When I got more yard room, I found that I wasn't compelled to move the stock, having plenty of room, and it seems as if unconsciously I have permitted my lumber to accumulate until I have on hand a lot more than I would like to carry.

"Necessity is not only the mother of invention, but of sales; and my change of status has resulted in my sales, compared with the amount of lumber on hand, being a good deal smaller than they were when I was working with less room than I have now."

A Matter of Salesmanship

Every man familiar with office furniture is aware that metal has made considerable inroads on the use of lumber in the manutactance of things. That is by no means all there is to this thing, though of into the factory buildings and you will find great lines of lockers and closets made of metal today which were formerly made of wood. Moreover, take up a magazine, for example say Factory and you will find in its advertising pages many offerings in the way of steel lockers and metal work for layatories and closets, but not a thing in the way of wood for this same purpose.

It is safe to say that not only has the average man been noticing these things for some time, but he has accepted them as an income trovertible fact and has gone right along feeling that there is not use trying to do anything about it. The result of all this is that lots of good cabinet trade which ought to be using some of our hardwoods and give more satisfaction all around has been captured by metal with practically no competition or protestive effort on the part of the lumber trade.

Now let us look into this matter and see why this is and what it is that makes metal control the situation with a lot of work that ought to be made of wood. It may as well be said right now as any time that in the final analyses it will be discovered that it has been quite largely a matter of salesmanship.

Metal is not a cheaper product than wood, consequently neither the factories using the lockers nor the office equipment people handling metal furniture have been induced to take on metal goods because of their cheapness. They really cost more than the best articles in wood.

It is not the appearance. This is proven by the fact that in order to create a pleasing appearance on the part of metal office furniture and factory lockers the manufacturers have gone to considerable pains and expense to imitate woods in finishing them off. There is on the market metal furniture finished in close imitation of quartered oak and some made to resemble maliogany, and everywhere manufacturers of these metal articles are paying a compliment to wood by imitating its color and figure in finishing off their goods.

Thus it is evident that it is not a matter of presenting a better appearance which makes the way for metal in this work. Wood not only presents a more pleasing appearance but it is much more satisfactory in use. It is not cold and harsh like metal and will keep its shape better.

This leaves for consideration practically only the one point of fireproofing qualities. This is the bugbear that has kept the wood interests buffaloed for a decade or more now, and yet it is nothing more than a silly bugbear. This thin sheet metal stuff used for desks, filing cases and factory lockers is not a safeguard when a serious fire occurs. To make really fireproof compartments of metal calls for two thicknesses of it with space between which is filled with cement, asbestos, mineral wool or some other non-conductor of heat. A single thickness of metal, while it may not be completely destroyed by fire, will receive and conduct heat so readily that papers and other combustible materials enclosed by it will be destroyed in case of a serious fire much more surely than if they were in wooden cases or lockers.

Moreover when it comes to fireproofing factory buildings, if the buildings themselves are made of brick or concrete with steel framing what little in the way of combustible material is added by the wood used in making lockers for the men will not amount to anything, and the one thing certain and sure is that good wooden lockers are cheaper to construct, will prove much more satisfactory to the men, and more useful in every way than anything which can be made of metal.

The one strong factor in making the way for these metal products to the office and factory has been a matter of salesmanship. The steel people have not only done press agent work, and in this made the most of the cry for fireproofing, but they have put on the road salesmen who have talked dealers in office equipment and factory owners into the use of metal. It has taken them several years, but

ad this transfer on a high map is the output of an interest of controller the argument and to set up an order of conditions salesmanship on the part of those interested in wood.

Now, since salesmanship was unquestionally the loggest factor in putting metal in the place of wood in all these things, it stoudd naturally follow that a proper order of salesmanship persist of ty applied will put wood back into its place here and help region at least a part of this trade. Moreover it will perhaps be called a within it would have been before to controvert the arguments of the metal people because the trade had had its experience with the metal goods and as a result is in good shape to be turned toward wood.

Some splendid evidence illustrative of this fact can be found in connection with big fireproof office buildings, schools and public buildings. Just about the time the metal interests began striving for the office furniture and locker trade they also turned their attention to sash and doors and interior trim for large buildings. They caught the eve of the architects, who, however, because of their experience with metal interior work are looking anxiously for other things more pleasing and satisfactory. They are turning back to wood at times even when the work is very exacting as to fireproof qualities. In some of the new office buildings where proof against fire has been insisted upon the architects have so strongly realized the superiority of wood that they have specified doors and easing of wood covered with a thin protecting sheet of ashestos and then finished over with veneer. In other words, they have had the wood fireproofed and still preserved the real wood face, not a cold imitation. This is somewhat expensive, but it is much more satisfactory than metal and perhaps after all is not so expensive as metal work itself.

This goes to show what can be done and is being done and it should lend encouragement to sales managers in both the lumber and furniture trade to wage a campaign for the return to wood in this kind of work. All will admit that it will mean a big increase in the consumption of hardwood, and if all the sales managers will turn to and get after this matter earnestly they can regain quite a lot of this trade.

The lumber sales manager may take the attitude that this is more a matter for furniture manufacturers and salesmen than it is for the lumberman. Sometimes it is, too, but acknowledgment or acceptance of this fact doesn't help the lumbermen out any. Maybe the lumber salesmen can stir up and inspire the furniture salesmen and encourage the furniture men to push wooden products more vigorously in competition with metal. Something along this line is worth trying, anyway.

Then when it comes to the matter of factory lockers, which, by the way, are quite an item, the lumber salesman is calling on factory owners right along and selling them lumber for consumption in their plant. While doing this why not make it a point to investigate and talk about the subject of lockers. Ask the men how they like metal and see if they wouldn't prefer wooden lockers, and by continual inquiry and discussion the salesman on his rounds should not only be able to get some good selling and advertising points for lumber, but he should be able to make some actual sales now and then and to encourage factory owners to return to wood for their lockers.

Salesmanship put the metal there in the first place; salesmanship is putting wood back into big office and public buildings, and there is certainly a good fighting chance for salesmanship to put more wood back into office work and factory lockers.

J. C. T.

It is never safe to judge of a thing's power for good or excl by its size alone, according to the statement made by an expert on harmful beetles and bugs. He says that forest insects destroy enough tumber every year to future the construction program of the may,

Insect Enemies of Seasoned Oak

If the destin tive work of success can be an end when the tree is cut and converted into lumber the damage would be much less than it is. Of the thousands of species of bretles, flies, moths and various sorts of bags and worms that feed on living trees, most cease their depredations when the trade, so all but some go tight about with their attacks and transfer their activities from the living tree to the seasoned wood, thile others that never touched the tree while it was alive, are attracted to the dry wood and become very destructive. No definite line can be drawn to separate the two kinds, for there are all soits of rides and exceptions; for consideration can properly be given first to certain heetles which live in the tree while it is alive, and which continue to live in the wood after it is seasoned and manufactured into finished commodities.

It she II be explain. "nat when mention is made of a best-working in wood, it should not be understood that it is a fully developed beethe with wings and legs popularly called a "bug," It is not in that form. It is a grub, called a hava, which will sometime develop into a winged and legged beetle; but while it is boring holes in wood, it is in the form of a grub or maggot, and is popularly called a "worm," Exceptions to this rule may occur, but in most cases the insect enemies of wood do their work while in the form of a grub. After they pass through their transformation and become equipped with wings, legs and other appendages, they are not in shape for erawling into narrow galleries and gnawing their way through solid wood, and for that reason whatever tunneling they have to do must be done before they reach their final stage of life.

The longicorn heetles—commonly called longhorns—are among the worst wood borers, although there are others that may be matched with them as running mates in their favorite occupation of boring holes in wood. A single beetle may be taken as a representative of the family. It shows what the habits are. It has no English name, but is known among entomologists as Monohammus confusus. The larva goes to work in the tree trunk, and when the log is sawed into lumber the insect is not in the least discouraged, provided the saw misses him. He goes ahead with his gnawing and seems in no hurry to work his way to the outside of the plank and escape. He feels so perfectly at home within that he remains, even while the board is passing through the planing mill, or, if a stave, while it is passing through the various machines that make the barrel. If the saws or the knives open his tunnel, the chance is that his career comes to a speedy end; but if he passes the crisis untouched, he will go on with his gnawing.

An instance is on record where one of these insects remained alive and active in the wood of a piece of furniture fifteen years. Another worked that length of time in a door step. A third issued from the leg of a table, where he had lived for more than twenty years, while a period of forty-five years is claimed for another veteran of this family, which deserves the title of Methuselah of his race. That is a very long time for an insect to live. Most of them are very short lived. Some do not live one day; others a few weeks only; most die within a year; the carpenter meth survives three or four years; the locust lives seventeen years; but there is little question that certain individuals among the long-horned cerambycids stretch out their span of life beyond two score years. The worst of it is they continue to "saw wood and say nothing" during their whole lives.

Some have maintained that the larva lies torpid all these years, that it sleeps like a bear or a groundhog sleeps in winter, and that the ordinary functions of life are not carried on. That may be the case sometimes, but not always. This larva in the door step, mentioned above, could be heard gnawing at intervals for years; and another is described by an entomologist, C. O. Waterhouse, who kept track of it for years in a wooden boot tree (an apparatus for stretching boots), where its gnawing continued year after year, although it worked at a very slow rate. It seemed to be taking life easy and ate only enough wood to sustain life.

The Monohammus confusus is not small. The hole it bores in seasoned wood may be half an inch in diameter. It is apparent that this

may be very destructive. Such an opening might may or ruin valuable wood and is hable to be particularly harmful if the wood has already been converted into include and products. The mature beetle is brown or gray and is about one and a quarter inches in length. It has scores of associates which lend it willing assistance in riddling seasoned wood with range (e.bes.

The long hornes, long laved, wood boring beetles are generally large. Size alone would usually distinguish them from the beetles of the ptinid family, which are generally small. Though the ptinids are small, some are very destructive. The very name is said to mean "destroyer" in Greek. These small insects have inappeasable appetites. They are always eating and they never get enough. They eat almost anything that can be gnawed. They are often pests in seasoned wood. Their mode of entrance is generally different from that of the Monohummus confusus, described above, which is in the log and simply remains in the wood after it is worked up. The ptinids may gain entrance in the same way, but they generally enter after the wood is partly or wholly worked up.

One of these (Aroboum strutum) is responsible for the riddled woodwork in "worm eaten furniture." The wood is full of little round holes. These are what coopers sometimes call "seed holes" when they occur in stayes. The holes may have existed before the staves were made, or they may have been bored afterwards. Similar holes often occur in old barrels. All may not be the work of the same kind of insect, but the effect is about the same. Paint on the barrel does not seem to keep the insect from carrying on its work, nor does it seem to make much difference what the barrel may once have had in it. It is a peculiarity of these ever-hungry ptinids that their appetities refuse nothing. The insects are called "seeds" because of their resemblance to small black seeds, and some persons suppose they are real seeds of some plant like a radish or turnip, Their skeletons are so loosely-jointed that the beetles can tuck their head beneath it, draw in their legs, bend their hard wings close about their bodies and they then appear like a little round shot. The "seed hole" in the wood is made before the insect becomes a beetle. It bores while in the form of a grub, but it is possible that persons may see the fully developed beetles in the holes, and thus conclude that the "seeds" made the holes in some way.

This family has some peculiar if not remarkable children. One of these is the "death watch" (Anobiam tessellatum), whose ticking in the dead hour of night alarms timid and superstitious people who fear that it is a token of approaching death for someone in the family. The noise is made by an insect about as large as a grain of rice, and it is hid away in a hole inside a wooden partition, beam, rafter, floor or piece of furniture. It there gnaws industriously, but sometimes leaves off its work and amuses itself by whacking its head against the side of its burrow. That produces the "tick" of the "watch." Insects have no voice, properly speaking, and they make their noises on either "a drum or a fiddle." When they peck on something, as the "death watch" does, it is drumming. When they scratch something, as the cricket does, it is fiddling.

The "death watch," with the assistance of a troup of near relatives, does a lot of damage to seasoned wood. It ruins beams, walls, joist and half-finished or wholly finished commodities.

Mention has been made of the enormous appetite which characterizes the members of this family. Most of their destruction is due to their attempts to get enough to eat. They are veritable sharks. The fierce belostoma, which is considered the hyena of the insect world, is not more incessant in his search for something to eat. Take the little Anobium paniceum (one of the "death watches") for an example. His bill of fare is a wonder. This insect will live and thrive on a diet of opium. It is the same creature that sailors call the biscuit weevil, because it infests biscuit casks on shipboard. It is also the "bookworm" that is so often heard of, and it flourishes on the dry pages of Dante and on the wrapping of Egyptian mumies. The following list of things which it eats seems almost incredible, but it is vouched for by high authority: blue flag root,

comfrey, gauget, marstanellow roots, anisced, acon to as posson as strychnine), Indian turnip, belladonan root, coffee, wormwood, ergot, tobacco and more than thirty other things of similar kind. It eats the deadliest poison with impunity. It is sometimes called the "drugstore beetle," because of its habit of going there to satisfy its appetite.

It can readily be understood that insects like these will not spare wood. There are known to be more than 150 species of these "seed" beetles, and a prominent entomologist ventured the guess that fifty remain unknown for every one we know. They look so much alike and work in places so hidden from sight, and are so hard to locate (except by the destruction they cause) that comparatively little is known of them. When a floor beam suddenly breaks, or a pile of staves, or a lot of empty barrels is found to be in a damaged state, or a storehouse of wagon stock becomes wormy, then some idea is gained of what it costs to satisfy the maw of the ptinids, which the ancient Greeks very appropriately named "destroyers."

A well-known source of damage to seasoned wood is what is popularly known as "the powder post beetle," or simply "powder post." This name is due to the fine dust that sifts from the affected wood. It is like sawdust only much finer—more like the dust produced by sand belts where wood is polished. The trouble is usually not serious, except where wood has been stored a considerable time.

The origin of this trouble is often misunderstood, and is attributed to "dry rot." Under certain circumstances so-called "dry rot." may produce an effort quite similar; but, strictly speaking, there is no such thing as dry rot; that is, if wood is dry and stays dry, it will not rot. The instances where rotting seems to occur are misleading. The wood which decays is either not dry or dampness reaches it in some way. Most timber damaged by powder post is dry. Some of it has been air drying for months or years, and it contains too little moisture to cause decay. The damage in such cases is done by insects, and they are generally spoken of collectively as powder post beetles.

The name answers ordinary purposes very well, but upon close examination it is misleading unless explained. It does not define any particular family, genus, species or variety of insects, but refers to all sorts and kinds of small larva that work in dry wood. Some of those described in preceding paragraphs are included, particularly those of the ptinid family, such as "seeds," "death watches" and the like. About the only condition to be observed in applying the term "powder post beetles" to them is that they must be small insects, must work in dry wood and must produce fine, dust-like powder. They need not be beetles and still be powder post insects, the way the term is popularly used. They might be wood bees, for some of these bore holes and eject very fine powder; but the term is not generally applied to wood bees. In most instances the work is done by the larva of very small beetles. The holes they make are often so minute that they escape notice until a very careful examination is made. Their presence in wood is first revealed by the powder that sifts out of the holes.

Damage from this cause is sometimes very serious. Valuable wood may be totally ruined. The worst of it is that before the presence of the insects has been discovered the interior of the wood is infected and no known remedy can be applied to save the infected stuff, except at prohibitive cost. The wood might be put in a kiln and heated hot enough to kill all insects within; but that is generally impracticable. The usual procedure is to cull out the affected pieces, use what is good, and remove the rest from the unaffected stock.

Oak stock is not the worst sufferer from these insects. Hickory fares much worse. The insects bore the wood to obtain food. They do not want the wood itself, but the starch and other food products in it; therefore they prefer to attack the kinds of wood richest in these foods. They like sapwood, because it contains starch and sugar, but heartwood has little. This explains why powder post beetles prefer hickory to oak: hickory products are chiefly sapwood, oak products are largely heartwood. A pile of oak staves, therefore, is much safer from attack by the powder post insects than a pile of hickory handles or wagon axles. Liability to attack does not depend

wholly on the presence of sapwood, for damage to neartwood products is frequently serious. Much depends on the kinds of wood. Some escape where others are ruined.

The preference which boring insects show for sapwood and their dislike for heartwood are well illustrated in southern Texas, where such woods as mesquite, huisache, ebony and cat's claw are cut. These trees have thin sapwood, and where products are stored it is not unusual to find the sapwood literally eaten up and the heart wood untouched.

Dealers in forest products that are hable to be injured by small boring insects are more concerned in finding out what can be done to lessen the loss than in discovering the names of the insects that cause the injury. As stated above, not much can be done after the insects get in the wood. The remedy should be sought before the attack becomes serious. An effective and not expensive mode of procedure is to sprinkle kerosone over the wood. If the beetles are not already at work inside the pieces, the oil will tend to drive them away. That an onnee of prevention is better than a pound of cure is as true in this case as in any other. When symptoms of attack begin to appear, the quicker the stock can be worked up the better. Insects already inside the pieces may continue their work, but articles fully manufactured, particularly if oiled or painted, will not further deteriorate on account of the powder post insects.

Wood Exports and Imports for August

The August imports of forest products from various countries are given in the following list, abridged from statistics compiled by the United States Bureau of Foreign and Domestic Commerce:

Quantities	F 44144
	8 21.241
2,101,000	113,171
4,927,000	337,208
	142,088

Total exports	\$10,090,000

Have a sign on your mill to tell the passers by what it is and who is running it. This is an inexpensive form of publicity that has been too long neglected.

Why is it that the man who is always on time and seldom misses a day from work is the one who does the least grumbling about the slavery of business?

Beech, Birches and Maples

The Department of Agriculture has published a bulletin contributed by the Forest Service on beech, birches, and maples in the United States, and their uses, both present and historical. This belongs to a series of bulletins on the "Uses of Commercial Woods of the United States," begun three or four years ago. Preceding publications related to the cedars, sequoias, cypresses, and pines. The present publication is the first dealing with hardwoods.

The three genera, beech, birch, and maple, which include eighteen commercial species in addition to a number of varieties and forms too small or too scarce to be of much importance, form a group closely related. This relationship, however, is commercial rather than botanical.

The woods of all have several points of similarity, such as hardness, strength, and susceptibility of fine polish, and in the main their uses are similar. They grow usually in the same regions, and they are often milled and lumbered as though they were a single wood, but the resulting lumber is piled and sold separately.

It is not unusual in the Appalachian region, the Lake states, and New England for lumbermen to speak of beech, birch, and maple as "the hardwoods," thereby placing them in a group by themselves, separate from oak, elm, hickory, and others which belong in the hardwood class. This is specially true when beech, birch, and maple go to chemical plants which manufacture charcoal, wood alcohol, acetates, and other by-products. These woods constitute about ninety per cent of all the hardwoods employed in distillation in the United States. They also make up a large proportion of the country's hardwood flooring, furniture, finish, and agricultural implements. In a variety of small commodities they hold first place.

Though there is a general similarity in the properties and qualities of this group of woods, yet each has its individuality, and in numerous ways it differs from the others, and has different or special uses.

Only one species of beech grows in the United States. It is the same tree whether it grows in Maine or Texas, but it is not alike valuable in all regions because climate and other conditions have much to do with its development. "An earlier record is claimed for beech," says the bulletin, "than for any other wood, even antedating the sycamore and cypress of Egypt. The words 'beech' and 'book' were synonymous in some of the earliest written languages coming into Europe, due to the practice of writing on thin beech strips. The existence of the root of the word in Sanscrit has been taken as strong evidence that the wood was used for writing materials in central Asia before the migration of the ancestors of the Germanic and Slavonic races westward into Europe. In beech, therefore, we probably have the oldest existing name of a wood in the world."

The most important uses for beech are in the manufacture of flooring, furniture, woodenware, clothespins, and in distillation, though it fills many other places.

The birches differ from beech in that they include a number of species, some of which are valuable, others of little importance in the supply of material. Nine in all are listed, one or more of which may be found in nearly every state of the Union. Sweet, red, cherry, or wintergreen birch, which are some of the names by which it is known, is usually placed at the head of the birches in value; but yellow birch is a close second. These two supply most of the birch of commerce. Their ranges overlap, and both go to mills together in many regions, and it is next to impossible to separate the lumber in the markets, and there is little occasion for doing so. These two trees supply practically all of the birch made into flooring, finish, furniture, and fixtures. The largest product comes from the Lake states and the northern Appalachian region. River birch, so named because it is apt to be found on the banks of rivers, particularly between Pennsylvania and Louisiana, has poor color and no figure, and is employed only for common purposes. It and yellow birch have ragged bark that rolls up in tat-

ters. No other birch of the middle and southern states has this feature.

Paper birch is a northern and northeastern tree, coming down through New England and New York to northern Pennsylvania. It formerly furnished the bark for canoes, and now supplies most of the wood for spools. It is an aggressive tree and takes possession of forest tracts bared by fire.

No birch of the United States, except these, has ever been important or will probably ever be. Gray birch is known in New England as old field or poverty birch, and is of small size; four little-known species occur in the far West and Northwest—western, Kenei, mountain, and white birch, and their only use is locally as fuel.

There are seven maples, if the box elder is counted as one; but the common hard maple or sugar tree is put to more use than all the others together. It is the common flooring, finish, furniture, and distillation maple, and its range of additional uses is so extensive that they are listed as classes rather than individually. The wood of most of the other maples is listed in commercial transactions as soft maple, except the western, or broadleaf maple of Oregon and California, which occupies a sort of middle ground, but is not abundant or important. The other maples are the black, which is usually considered a form or variety of the sugar maple; red and Drummond, belonging in the soft maple group; and vine maple, which is more of a curiosity than a timber tree, and grows in Oregon and Washington.

Probable Victory in Pridham Case

W. B. Morgan, chairman of the National Classification Committee of Lumber and Wooden Box Interests, has returned from Washington, where he went to attend the hearing in the Pridham case before the Interstate Commerce Commission. The hearing was concluded some time ago, but the commission has recently been going more thoroughly into the economic features involved. Mr. Morgan says that in his opinion the commission will decide in favor of the wooden box interests and asserts that this will be a marvelous victory for the lumber interests of the country and particularly of the South. He bases this view on the fact that the railroads are very much opposed to the fiber packages, owing to the numerous losses which have to be paid out as a result of breakage, leakage and other conditions. He says the railroads estimate their losses from this source at approximately \$100,000 per day. Mr. Morgan also says it is quite apparent that the small increase in the cost of the wooden packages is more than absorbed by the saving in transportation through the greater effectiveness of the wooden containers. He, therefore, believes that there is no validity to the claim made by the fiber people that the use of wooden containers results in higher cost to the consumer. Mr. Morgan also believes that a favorable decision from the commission in regard to the wooden packages will very greatly remove the necessity for the railroads to advance rates five per cent, as they have recently claimed. In fact, he estimates that the saving in claims alone will amount to about \$90,000,000 a year. He thinks this is one of the most important phases of the controversy. Mr. Morgan is very much interested in the probability that the Interstate Commerce Commission will order the common carriers to keep a record of the results obtaining as between goods shipped in fiber packages and those shipped in wooden containers. He believes a tabulation of records along this line will prove of very great value to the commission in reaching a decision in regard to the merits of the con-

Wearing a long face won't get you anything. Trade it off for a cheerful countenance, even if you have to give some effort to boot. Our faith in the future and better things to come is the greatest sustaining force we have when the going gets hard.

The easiest way to get all you want in this world is to not want too much.

Meeting Michigan Manufacturers

The regular quarterly meeting of the Michigan Hardwood Manufacturers' Association was held at the Hotel Pontchartrain, Detroit, on Wednesday, October 22. The meeting was well attended; in fact, the attendance was considerably more than at the last meeting.

The entire business was concluded in one session, the features being the excellent market report presented by Bruce Odell, chairman of the market conditions committee, and the decision of the membership to purchase, as an association, the amount of stock allotted by the Forest Products Exposition.

The meeting was opened with the usual roll call and minutes, after which Secretary Knox read an excellent report. Mr. Knox said that he was prepared to present a very satisfactory stock report, and that the comparisons on hardwood are especially favorable, although hemlock shows more on hand unsold than a year ago. The latter condition, he said, was not to be wondered at, considering the status of yellow pine and the effect it has had on the northern market. According to Mr. Knox, building construction has been very active during the past month and the demand for northern hardwoods and hemlock has continued to be good at no reduced value.

He stated, in fact, that the lumber business has more than held its own, and that the present outlook seems to be very good.

Reporting on finances, the secretary said that the general fund on hand Oct. 15, 1913, was \$4,438.27, which will more than carry the association through to Jan. 1. The forest fire fund had a balance of \$2,697.52 on Oct. 17, out of which, however, the October salaries and expenses of the deputy wardens will have to come.

The secretary then commented upon recent activities of Secretary J. E. Rhodes, of the National Lumber Manufacturers' Association, particularly regarding the Forest Products Exposition. He also stated that at the meeting of the board of governors of the National Lumber Manufacturers' Association, held in Kansas City in June, the subject of inter-insurance was discussed and the secretary expressed his belief that there is a probability of something to the benefit of the lumbermen coming out of it. He said that President Richardson would make some interesting comments upon these lines.

On motion relative to the appointment of delegates to the National Conservation Congress, which meets at Washington, Nov. 18 to 20, it was decided that the president could appoint five delegates, one of which should be Bruce Odell, of Cadillac, who would have his expenses paid by the association.

H. Ballou, reporting for the railroad committee, said that there was no formal report to make, but he opened up a discussion regarding the proposed changes in freight rates in Michigan. Mr. Ballou said that it was imperative that rate matters coming up at Lansing should have the close attention of the lumber trade. He said that the State Railroad Commission has required Michigan railroads to file equalized rates, which have been filed to take effect Nov. 15. These rates, Mr. Ballou says, will not be equalized for lumbermen, in that all commodity rates are cancelled and resulting class rates would not be in conformity with equitable adjustment. Lumber under this arrangement would be placed in the sixth class, this change in itself constituting a decided increase on the general level within the states.

In addition, it is contemplated that a further increase will become effective if the requested advances are granted, which would make a double increase over the present rates on lumber shipments within the state. It was brought out that there is a conflict of authority between the state and Interstate Commerce commissions.

M. E. Thomas, of Cobbs & Mitchell, Inc., and the Mitchell Brothers Company, Cadillac, suggested that a committee be appointed to watch the movements regarding freight rates at Lausing. He said that the lumbermen should petition the State Railroad Commission for a hearing before any change of rates goes into effect.

Regarding the relation between the Michigan rates and the interstate rates and the consequent overlapping of authority be tween the Interstate Commerce Commission and the State Railroad Commission, Mr. Thomas stated that the results in Michigan would depend upon the decision of the Interstate Commerce Commission, and that if the latter body suspended the inauguration of the proposed general horizontal advance in interstate rates, the state commission would do the same on Michigan rates, in order that the two changes should start at the same time. He stated that in the central classification territory the railroads are planning to make a horizontal increase of five per cent. These increases were filed Oct. 15 to take effect Nov. 15. At the same time the state rates were filed to take effect at the same date.

Mr. Thomas said that even if the Interstate Commerce Commission does not suspend the interstate rates, lumbermen should have a hearing on lumber rates before they take effect, because of the relation of Michigan to shipping territory in other states.

It was brought out in the discussion that railroads of Michigan had given assurance that no injustice will be done to Michigan shippers, but some skepticism on this score was shown among members who have bitter experiences to look back upon.

President Richardson suggested that it might be probable that the raise in rates in Michigan would be greater than in other states, which in itself would constitute a gross injustice.

C. A. Bigelow said that in view of increased cost of operation and supplies, he thinks that the railroads may be entitled to the five per cent increase, and that he would be willing to abide by the decision of the Interstate Commerce Commission. He said, however, that inasmuch as Michigan railroads have cancelled previous tariffs and filed new tariffs to take effect Nov. 15, establishing increases of from five to thirty-three and one-half per cent, he thought the railroad committee should take action. He moved that the committee be authorized to look after the matter at Lansing, and to protest against any raise in rates other than those authorized by the Interstate Commerce Commission on interstate business.

Secretary Knox stated that it was his opinion that the difficulty in Michigan was encountered because of the difference in bases for rates. He stated that one reason for the proposed changes in the intra-state rates was the order of the State Railroad Commismission requiring the railroads to get together on a more logical system of rate basing.

H. Ballou cited as expositions of proposed advances in Michigan

Rates on Detroit basis to be raised from six to eight and one-half cents on the Michigan Central to certain territory, and on the G. R. & I. from seven to eight and one-half cents. He stated that the proposed equalization advances Cadillac rates from fifteen to thirty cents. He also said that in view of the proposed advances it is a decided injustice to Michigan shippers that rail and water rates from Menominee, Green Bay and Oconto to Detroit are still ten cents.

Following further comment, Mr. Bigelow's motion was carried. F. A. Diggins, of the legislative committee, being absent, there was no report of that committee.

D. H. Day stated that he was happy to say that there was no report of the grading rules committee.

J. S. Hickok, chief fire warden of the Forest Fire Protective department, delivered an exhaustive report showing the work done since the last meeting. This report was excellent in arrangement and detail and offers a very logical outline for the organization of forest protective work in any section of the country. For this reason it will be printed in full in the next issue of Hardwood Record.

Bruce Odell then delivered his usual valuable report on market conditions, reporting for the market conditions committee. The report follows:

Report of Market Conditions Committee

Seven years ago at Traverse City, Mich., was held the first October meeting of this association.

To a manufacturer who did not attend that meeting, and take an active part in it, a copy of the report of the market conditions committee would not be very impressive. It consisted of only three short paragraphs and to us now might not seem to say much but within six months after the meeting one of our members who was interested in two large operations in Michigan made the statement that this report was worth \$10,000 to the two concerns in which he was interested. This manufacturer evidently understood the language of the report and heeded its recommendations.

We trust you will bear with the committee for this reminiscence as it is not given in a boastful way but lest you forget as we are all inclined to do. This manufacturer in particular may not forget this particular benefit but many of you profited proportionately at the same time have no doubt forgotten, just as you may have forgotten many other times when you profited by the association work and statistics.

The particular benefit referred to in the October 1906 report was due largely to our statistics of that date, the faith of the members in those statistics and confidence in the committee's report, all of which are necessary to get the full benefit of association work. During these seven years we have never had occasion to doubt the accuracy of our stock reports and they are now recognized by not only ourselves but also by the wholesaler, jobber, dealer and consumer as giving accurately the stock conditions in northern hardwoods and hemlock, all of which is very gratifying but we believe that the producer should study more closely the amount of stock, sold and unsold, and make comparisons with like periods of other years. This is one of the large factors in determining demand and values. While your committee has undertaken to do some of this segregating and comparing of the different stocks more of it should be done by the individual manufacturer.

Taking into consideration the political and tariff agitation of the past two years and the effect it has had in the general feeling of caution and the slowing up of business in many lines, our stock reports of October 1, 1913, indicate a very satisfactory condition generally in northern hardwoods and hemlock.

Total stocks of hardwood lumber are but three and one-half per cent greater than the same period in 1912, a time when stocks were considered unusually low and would not have been enough to supply a period of good general business activity. They are only eighty per cent of 1911 stocks. Maple in the grades of No. 2 common and better shows an increase of about 9,000,000 feet. nearly all of which is in the hands of maple flooring manufacturers, who produce their own flooring stock, but the stock of these grades is 14,000,000 less than that of two years ago and maple flooring conditions good as compared with most other years. Stocks of No. 3 common maple are 5,000,000 feet more now than a year ago, but they are 9,000,000 less than 1910, and 20,000,000 less than 1909. Stocks of maple unsold in both No. 2 common and better and No. 3 common are less than sixty per cent of a year ago and much less than those of any year since 1907.

Stocks of ash are about half what they have been for previous years. The stock of basswood is about eighty-eight per cent of the 1911 and 1912 stocks and identical with that of 1910. Beech shows but 19,000,000 feet total stock as against 26,000,000 for 1912, 35,000,000 for 1911 and 43,000,000 for 1910. Birch and soft elm stock show a very slight increase over the stocks of last year, but much less than either 1910 or 1911.

The conclusions reached by your committee are that even with the demand much less than normal during the coming year there should not be, and probably will not be, much if any concession from present prices, and that with good general business conditions a material advance may be expected in the prices for northern hardwoods generally.

In this connection your committee wishes to call to your attention the item commonly known among manufacturers as "good maple." You will recall that about four years ago this committee had prepared a statement showing the total stumpage owned by each member, the amount being cut each year, and how long it would take for members to complete their individual cuts. Time has verified the correctness of this report and while the general cut of northern hardwood has not decreased in proportion to the members completing the cut of stumpage owned by them, the cut of "good maple" has increased nearly identically in that proportion, as the new fields of operation do not contain the quality of maple found in the old operations. Uses for this "good maple" have developed, showing it superior to any other available wood for these particular purposes, and we believe that a very material advance may be expected in the prices of the better grades of maple.

We also call to your attention the item of beech. The use of this wood has developed in the past few years more than any of our other northern hardwoods. Its use was encouraged first because of the extremely low price for it, and then further developed because of its real intrinsic value. It has stood the test and for many purposes it has been found superior to the wood for which it was substituted. The use of beech is firmly established now, the demand for it will increase beyond the supply and there is no reason why it should not continue to sell at a price so much below other northern hardwoods or any other wood that might be substituted for it. The stock of beech for four years, if we had

no other reason, would very conclusively indicate a recommendation at this time.

Stocks of hemlock on hand Oct. 1 show a consistent and persistent decrease during the past few years, being 205,000,000 for 1910, 183,000,-000 for 1911, 119,000,000 for 1912 and 112,000,000 for 1913. As is well-known there has been much substitution of southern pine for hemlock, but as is shown in the decreased stocks of hemlock, substitution has been necessary.

The use of hemlock is becoming more and more a local one but the waning supply makes this condition imperative. Even with an increasing amount of scuthern pine coming north the small amount of hemlock in stock at present should and probably will be absorbed at present prices. The use of hemlock when it has preference and when a building lumber must be had quickly should keep up demand for it to the extent of the supply.

Stocks on hand Oct. 1, 1913, are 13,000,000 as against 17,000,000 for 1912 and are in very urgent demand, good prices prevailing for prompt shipment.

Mr. Odell's comment following the reading of the report brought out the fact that there was only three and one-half per cent greater stock on hand at the time of compiling his statistics this year than in 1912. He also stated that the best of maple lumber should be bringing \$5 a thousand more than it really is bringing, and also said that an effort should be made to bring about that condition.

In speaking of beech, Mr. Odell said that he considers it the best wood for various uses to which it is now put, that could be possibly secured. He said that the supply will shortly be found to be less than the demand.

Commenting upon conditions in Wisconsin, R. S. Kellogg, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, Wausau, stated that statistics which will be presented at the forthcoming meeting of his association show that on Oct. 1 there was from ten to fifteen per cent less hemlock than a year ago, and that there was no increase in the quantity of hardwood. He stated that while there was a slight increase in the hardwood log input this year over last year there was no increase in hemlock. He stated further that firm prices in hardwood and hemlock prevailed all year, in spite of the fact that yellow pine has been making big inroads into the hemlock market and is selling in the northern market for from \$3 to \$4 less than hemlock, in which there has been no change during the last two months.

Mr. Kellogg made the interesting observation that prices will unquestionably be stiff during this season, partly because of the fact that it is certain that the cost of logging in the territory in which the membership of his association operates will increase from twenty-five cents to a dollar a thousand over last year.

President Richardson then introduced George S. Wood, manager of the Forest Products Exposition. Mr. Wood told of the purpose and growth of the Forest Products Exposition plan, and stated that his plans are based on his experience with past expositions. He expressed the belief that the exposition will come out better than aven.

It was finally decided, by motion, that the association buy the forty shares at a cost of \$2,000, as an association, and join with the Wisconsin association if it seems best to the board of directors to do so.

The motion also carried with it the provision to provide a sum of money not exceeding \$2,500 from the association's funds for the purpose of preparing the exhibit. The motion was carried.

In speaking on the subject of inter-insurance, President Richardson said that he thought a committee should be appointed to work along the lines suggested at the Kansas City meeting of the National Lumber Manufacturers' Association. A resolution to this effect was made and carried.

C. A. Bigelow moved that the regular assessment of ten cents a thousand feet be made, which motion was carried.

The meeting terminated with an interesting discussion regarding water stocks and reports of sales of water shippers.

G. von Platen stated that the reports had been of great benefit, inasmuch as they tended to hold the market on a uniform level.

D. H. Day advised that association members hold on to water stock as long as they could, as there was absolutely no necessity for contracting a long way ahead for shipments of this sort.

The meeting then adjourned.

Realizing Steel Car Weakness

Nobody denies that in a bad wreck something will smash, and it may be a wooden car or it may be a steel car. Experience shows that both will go to pieces if hit hard enough, and experience also shows that the steel car is at fault oftener than the car of wood, in proportion to the numbers of each in use.

The first weakness of the steel car, and one which the steel advocates carefully avoid mentioning, is its proneness to leave the track or to break or spread the rails. It is heavy and rigid. It refuses to take curves, and if there is a defective rail or a rotten tie, the steel car finds it and begins to smash things, while the wooden car, being lighter and more yielding, passes over and gives the track walker a chance to find the dangerous place.

This phase of the situation was ably presented by James O. Fagan in a letter to the New York Times, Sept. 19. Among other points made by him were the following:

"Under present conditions on the railroads steel car legislation would not only be very unwise, but would actually be a case of dangerous Federal interference with railroad management. About a year ago quite a sensation was created by the discovery and publication by the Interstate Commerce Commission of facts relating to the manufacture of steel rails and the stability of roadbeds. Accidents pointing to weakness in these features were of daily occurrence. An abundance of evidence was published about rotten ties, broken rails, and weak bridges. Comparisons were made between the cost and structure of roadbeds in this country and abroad. Meanwhile railroad presidents and managers all over the country were taking hold of these problems in earnest, and at the time public statements were made by these men to the effect that the railroads were in immediate need of millions upon millions of dollars for better ment purposes, and specifically to prepare for the problems connected with the constantly increasing weight of cars and locomotives. permitting or compelling the railroads to add an unlimited number of ponderous steel cars to their equipment, then, would it not be weil to secure from the Interstate Commerce Commission an opinion as to the present preparedness of the railroads to carry in safety this additional weight? Surely, these tracks and roadbeds are matters of the first consideration, and any cart-before-the-horse legislation should be looked upon by the people with the greatest disfavor.

"In fact, a careful scrutiny of the records for the past year or two warrants the suspicion that the unusual weight and speed of these trains have been the probable causes in most of these accidents. Saving lives in this roundabout fashion is something new in railroad and human economy. It reminds one of Dickson's hero who saved a small fortune in his mind by purchasing at bargain sales articles for which he had absolutely no use."

The New York Times commented editorially upon this matter by taking the ground that:

"The provision of steel cars never prevented accidents, never can prevent them. It may, indeed, be a direct cause of the spreading or fracture of rails and of consequent derailments. The prevention of accidents on the railways has become a direct personal issue between managements and men. It is an issue of the gravest importance to the public, and it has been brought to an acute stage by the continual demands for more pay, or, when that is refused, iess responsibility for the trainmen to whose hands are intrusted the lives of passengers. It might even be argued that the multiplication of, mechanical safety devices is now in itself an element of danger. When engineers, conductors, and fiagmen unite to thrust the safety first responsibility upon the power of car bodies to withstand shocks of collisions resulting from their running past signals, it is time for the public to take a part in passing upon their qualifications."

The common sense method would be to attain safety first by keeping cars on the track, and this is hard to do in case of the steel car. A line or two in the ordinary news dispatch regarding wrecks often gives the secret away. Note the following in an associated press dispatch, published Sept. 16, regarding a wreck at Coatesville, Pa.

"The train was not running fast when the sleepers, of steel construction, left the tails and turned over on their sides. One of the cars slid half way down a fifteen-foot embankment. There were sixty-eight persons in the sleepers. The accident is said to have been due to the spreading of the rails."

The three points here are, the cars were steel, the train was not running fast, and the rails spread. Would an element of safety be added by a law compelling the use of steel cars exclusively? Would not the rails spread just the same, or worse?

Almost exactly the same story was told in a dispatch, Sept. 20,

from Nabatta, Kansas, where twenty passengers were in area where steel cars left the true's hecause of a detective rail, and went over an embanking nt. Is legislation needed here to compel the use of cars already in use cand in the wreely?

News agency dispatches to the papers are impartial. They are not arguing for the steel car, the wooden car, or any other car, but they simply tell what happens, and that is why their testimony as to the insulacioney if not the actual danger of the steel ar is so telling.

I'wo days later than the dispatch quoted above, the Brooklyn Eagle had nearly two whole pages of description and pictures of a wreck on Long Island in which three were killed and forty-five were hurt. The news agency the same impartial agency which simply tells what happened introduced the two-page description in one plain straightforward sentence as follows:

"Three persons were killed outright, two others were injured so severely that they are expected to die, and forty-three other passengers were more or less seriously injured early today in a head-on collision of two electric passenger trains of steel construction, on the Whiteston, Division of the Long Island Railroad at Cellege Point"

Here were steel cars, and there was not even spreading rails to offer as an excuse for the necident. It was a "head on" affair, and that is the situation in which steel cars are supposed to display their elements of satety. The news report tells how they did it:

"There was a crash that could be heard for more than half a mile, and the Manhattan bound train pierced its way through nearly half the length of the first car of the opposing train before both trains came to a stop. Passengers, who had been hurled in all directions from their seats, lay in a jumbled mass on the floors of the trains for a moment, and then as many as w re able rushed to the open. They tend that none of the cars except the first of each train had left the rails. Of these, the head car of the Manhattan-bound train showed no signs of the accident save that the front end was mashed in and its forward trucks lost under the wreckage of the car with which it had locked itself. On the latter car the front end was entirely torn away, and from the front vestibule, where the motorman's box had been, great ribbons of the steel sheathing of which the car was built had been rolled back as if by a gigantic canopener for fully half the length of the ear."

An inspection of the photographic illustrations of the wreck, published in the Brooklyn Eagle, shows that the steel car went so completely to pieces that it was a tangled heap of scrap. No wooden car, even of the most flimsy construction, was ever more completely wrecked. This is not a new occurrence. Steel cars have crumpled many a time under the impact of collision. No more dependence can be placed in them than in the wooden coach—perhaps not as much. They appear, therefore, to be no safer than the wooden car when the accident comes, and are far more liable to cause accidents.

The element of greater safety, which is so loudly proclaimed by the steel interests, seems to be a myth. All travelers know from experience that the steel car is less comfortable than the wood, but many have cheerfully endured the discomfort because of the increased safety which they supposed they were getting when they rode in the steel coach. The accumulation of accidents to the steel car is piling up proof that it is less comfortable and no safer.

One of the farthest-fetched of all attacks on the wooden car has recently appeared in a circular sent out to the members of a travelers' insurance association of prominence. It is based on the wreck of three cattle cars some months ago in Texas, and a photographic picture shows the demolished cars. There is no question that they were thoroughly wrecked, but the picture shows something that doubtless escaped the author's notice in his zeal to exhibit the broken cattle cars. The camera has not been trained sufficiently in prevarication to leave out tell-tale details that do not help the deception. Down the track stands the car that demolished the three cars of cattle, and it is a common old wooden box car. The explanation is apparent. The three-flimsy stock cars, which are made of slats like a cornerib, were simply crushed when the wooden box car hit them. It was wood against wood, and the strongest came out uninjured.

Gum Manufacturers to Organize

On Saturday, Oct. 18, a north, which will go down in gumhistory as of exceeding segretaines, took place at the Hotel Gayoso, Memphis, Tenn. The meeting can be said to be directly the result of the very apparently diminished demand for gumwhich has been noted for some little time past. Certain prominent manufacturers have realized the seriousness of the condition and have felt it was incumbent upon the bulk of the producers of gum to get together on a common basis to work out ways and means for increasing the market for their product. Some wind of this move has been abroad for quite a little time in connection with the campaign to create a fund for general advertising of gum, but the meeting itself was the direct result of the efforts of C. L. Harrison of the Himmelberger-Harrison Lumber Company of Cane Girardeau, Mo.

No permanent organization was effected, although direct steps were taken to that end, and the opinion was expressed by men prominently connected with the meeting that a permanent organization is a positively assured fact for the near future.

If nothing else were accomplished, the expressed opinions of those present at least put the gum condition in a more favorable light. According to reports of the attendants at the meeting, they have an average capacity of from 50,000,000 to 55,000,000 feet a year and find that they have an average of only four months cut ahead, which is not so bad as they thought. They have 21,600,000 feet on hand. According to the report, the average of red gum to a log is twenty-five per cent.

As stated, there was no permanent organization formed, but, judging from the sentiment expressed, one is strongly desired. The following committee was appointed for the purpose of working up plans to be reported at a meeting which will be held four weeks from the date of the original meeting: E. A. Lang, L. P.

DuRose, C. L. Harr son, T. W. Pry, J. W. McChire, F. R. Gadd, L. E. Brown.

Another committee was appointed to act as a sort of membership committee for the purpose of zetting together a list of the names of eligible manufacturers and secure their presence at the next meeting to be held as stated in four weeks.

W. E. DeLaney of Cincinnati was elected temporary chairman of the meeting and J. W. McClure of Memphis temporary secretary. There is no indication as to who the officers for the permanent organization anight be when it is effected.

The discussion of the red gum market developed the fact that it was not so weak as it had been thought, and that there was more red gum cut and sold this year by those attending the meeting than ever before.

The question of publicity for gum was also given some discussion, but nothing definite was determined in this direction, it being probably considered advisable to wait until the permanent organization was formed before going ahead on such work.

While the progress made does not seem to be unduly auspicious at first glance, it can readily be comprehended that with such a start it is a comparatively simple matter to form a strong association of gum manufactures, which association when properly organized would unquestionally have a powerful influence upon the manufacture and distribution of red and sap gum. Considering the important place which gum occupies in the hardwood demand of this country and foreign countries, it is not a question of "why is this organization to be formed?" but rather, "Why wasn't it formed long ago?" The meeting undoubtedly constituted an epic in the affairs of gum manufacturers and it will be interesting to watch how the proposition works out before the next meeting takes place.

🧲 Chicago Building Project Endorsed 🜉

As a prominent member of the Chicago lumber trade expresses it: "You can't hold them back on this Lumbermen's building proposition." The spirit displayed at the meeting of the Lumbermen's Association of Chicago following the banquet at the Hamilton Club on Tuesday evening, October 21, was strong proof of the truth of this assertion.

In the absence of Murdock MacLeod, president of the association, Vice-President Mashek presided at the meeting. He reviewed the work of the building committee composed of George J. Pope, Everett A. Thornton and Edward E. Skeele. Mr. Mashek said that the committee had worked in close harmony with the association and its board of directors and had been given every assistance and advice possible by the board. He added that it now devolves upon the lumbermen themselves to give the project the desired support in the matter of space rental, to put the proposition through.

inasmuch as the meeting was mainly for the purpose of discussing this building question, George J. Pope, chairman of the building committee, took the chair at this point for the purpose of telling of the status of the arrangements and of answering the questions and leading the discussion. He stated that the committee's arangements are in fairly concrete shape but urged that prompt action is necessary inasmuch as Nov. 1 is the limit given for the rental of the 30,000 square feet of space necessary. He said that unless this amount of space is contracted for by the first of November, the project will be given up definitely, and that so far the work of the committee had resulted in leasing 20,000 square feet of space, not including the space to be occupied by the Lumbermen's Association. Mr. Pope explained that the committee has met its greatest

difficulty in the spirit shown by some of the lumbermen who seem to be willing to postpone the definite contracting for space for no apparent reason or for trivial reasons. He requested that those not firmly convinced but of open mind in the matter give the committee an opportunity of calling upon them at an appointed time in order to demonstrate conclusively the practicability and advisability of having space in the Lumbermen's building.

The architects of the proposed building, Holabird & Roach, had a representative at the meeting for the purpose of explaining in detail the various features of the building. A screen and lantern were provided, and exterior and floor plans were thrown upon the screen. As explained in a previous announcement, the building will be 100x134 feet and 200 feet high. According to the plans shown, the exterior will closely resemble that of the McCormick building, while it is planned to have the interior equal in every respect to the modern office buildings of the city, marble and mahogany being used. The structure will be equipped with six elevators. An arrangement will be in effect on each floor whereby any amount of space can be given to any tenant, but the McCormick estate provides that partitions put in at request of tenants must remain intact during the leasing period. This provision is the result of the short lease which is asked, namely, for five years. The depth of the larger offices from the windows to corridors will be twenty-four feet, while the smaller ones will be sixteen and eighteen feet. In planning the structure, particular attention has been given to the matter of space, light

M. C. Kemmen, who has charge of the McCormick building, also owned by the McCormick estate, made some interesting sug-

gestions which would indicate that the character of the Loubermen's building will be first class in every way. He say, it is 325,000 persons entered the Metorum k building between Seri 15 and Oct, 15, and that the elevators in that period traveled 5,335 miles. He stated that cleanliness is insisted upon by Mr. McCormick as of paramount importance and that in order to satis factorily take care of this feature in the McCormick building it requires 120 women and 65 men every day, also 6 men washing 93 pairs of windows daily one week to complete the entire building.

William H. Beebe, formerly connected with the lumber business and now having charge of the business administration of McCormick buildings, also talked of the advantages to be derived from centralizing the lumber interests in the Lumbermen's

building. He signs a particularly favorably of the location selected. He signs show those present that they give the matter of signing for space their numediate attention. One of the points which Mr. Bodto made was that the centralised a cangement would be of great assistance to the small yard man who has but a limited time in his visits to Chicago to buy a small amount of lumber. It would be of equal and in some cases correspondingly greater assistance to other lines of the consuming industries,

Frederick L. Brown, former president of the association, talked in behalf of the project and said that to have success one must have a definite aim and that with any branch of trade following

Before the meeting adjourned, a unanimous resolution was passed favoring the bailding project

The New Type of Car

Editor's Note

The following information was received by Hardwood Record just better going to press, and is timing to as received, with application appearing as seen on pages 30 and 35.

Commissioner C. C. McChord of the Interstate Commerce Commission, has stated that the lumber manufacturers need feel no hesitancy about communicating their views regarding the steel car agitation to the commission, stating that the commissioners recognize that there are two sides to the question, and that they desire to ascertain the facts. It is feared that the hysteria for the rapid installation of steel cars will cause many car builders to engage in supplying the demand, whose plants are not properly equipped for producing steel cars made as they should be, and that as a result there will be many so-called steel cars placed on the railroads of the country which are inferior to strongly built wooden cars. The commission is now engaged in investigating this phase of the matter.

The Pullman Company, which has a large number of well built wooden sleepers still in its service, in its desire to comply with public sentiment, and safeguard its passengers, has just adopted a method of construction adaptable to cars either of steel or wooden type, by reinforcing the underframe and ends of the car in a manner which offers sufficient resistance in the vestibule and platform to prevent collisions telescoping, or battering down on the walls. This method, which has just been perfected, is being offered to the railroad companies which desire to strengthen the platforms and vestibules of their wooden cars. "The principal feature of the new design is an 'I' beam, heavy in section, bent in the form of a 'U,' the legs of which extend upward through an aperture in the platform casting, the upper ends of the 'I' beams being thoroughly anchored in an end superstructure made up of structural shapes. One leg of the 'U' forms a door post at the entrance of the car, while the other forms a door post of the vestibule. The loop of the 'U' is under the platform, and connected with the underframe. In case of collision, should one underframe override that of the next car, its progress will first be obstructed by the legs of the 'U' beams at the buffer sill, which, as they bend, will tend to lift the whole car body, thereby giving greater resistance to the further advance of the overriding car. The construction is most substantial and efficient."

Many prominent railroad men are not in favor of all steel car construction. Erank expressions are being obtained from competent car builders and railroad men. The following is quoted from the report of the engineer of the Minnesota Railroad & Warehouse Commission:

In our effort to eliminate the causes of collisions, we should confinourselves strictly to questions which are pertinent to the problem. The wreck-resisting qualities of steel and wooden cars should not enter into consideration, because to anticipate the continuation of this lamentable feature of railroad operation, with a view toward the construction of wreck-proof cars and equipment, would be equivalent to a suggestion to the public that they should not expect to obtain satisfactory relief from preventable railroad accidents.

A bill directing the use of steel cars, block signals and other safety devices by the railroads of the United States in the discretion of the Interstate Commerce Commission is being drafted by Representative Stevens of New Hampshire, the chairman of a subcommittee of the committee of the Interstate Commerce Commission. The bill will specify a time limit within which steel cars shall be substituted for wooden cars. It will also include the operation of trains and other safety regulations to be administered under the jurisdiction of the Interstate Commerce Commission, which is co-operating in the preparation of the bill. The bill will be submitted at the present session of Congress, but will not be considered until the next session. Mr. Stevens' committee will meet again about November 15.

Steel Cars Unpopular in England

U. S. Consul Albert Halstead, at Birmingham, England, says that the English do not take kindly to the steel car, and that the matter of fireproofing wood used in cars is preferred, to lessen danger from fires in case of accidents. "The idea," he says, "that steel cars should be constructed for passenger traffic does not seem to meet with any great consideration at present. It seems as if American firms who fireproof timber might find it to their advantage to approach British railways with a view to selling them fireproofed timber for new car construction, as well as to approach the big railway-carriage makers in England."

Work Well Outlined

The Fifth National Conservation Congress which meets in Washington, D. C., Nov. 18, is to be devoted largely to forest conservation, because of the national importance of the subject in its many phases. Fublic interest is involved, because upon the proper solution of the various problems depends the cost of the wood without which our civilization would decline; the perpetuation of the timber supply; the development of indro-electric power; the utilization of non-agricultural lands; the availability of water for irrigation; the preservation of forest areas for health and recreation, and many other developments essential slike to every citizen from the lumberman to the man who owns neither a tree nor a foot of land.

Two billion seven hundred million dollars is the amount of our annual bill for drinks and smokes, according to a magazine authority; one-fourth of it being for tobacco and three-fourths for liquors. Verily Uncle Sam has some jag bill, even for a family of size and parts.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 583-Seeks List Cargo Shippers Pacific Coast Wood

Utiley, N. Y. Oct. 14. Editor Hyrowood Ricemet: If you can conveniently do so, we would be glad to have you give us the names of a few good reliable lumber manutacturers on the Pacific coast, large enough so that they could ship lumber in carge lots to the East.

The above correspondent has been given a brief list of leading producers of western lumber products located at various ports. Any others interested in the inquiry can have the address on application.—
Editor.

B 584-Wants Red Cedar

CLEVELAND, O., Oct. 14.—Editor Hardwood Record: Can you give us the names of several responsible southern mills who cut and market red cedar suitable to manufacture into cedar chests?

MANUFACTURING COMPANY.

This correspondent has been given a brief list of manufacturers of Tennessee red cedar. Any others interested can have the address on application.—EDITOR.

B 585-Seeks List Hardwood Log Buyers

COLUMBIA, Mo., Oct. 15.—Editor Hardwood Record: This department receives frequent inquiries from farmers regarding the market for mixed lots of logs, especially hardwood logs in small quantities. Can you give us a list of buyers in small lots of hardwood logs so that we can answer these inquiries?

Professor of Forestry, Columbia University.

Mr. Dunlap has been advised that a list of buyers of small lots of hardwood logs would be as numerous as the small hardwood mills throughout the country, and that it would be impractical to supply him with a complete list.—EDITOR.

B 586-Seeks Thin Veneer

CHICAGO, ILL., Oct. 20.—Editor HARDWOOD RECORD: Will you please give us a list of producers of thin veneer for wrapping purposes? We are buyers of this material in carload lots.

MANUFACTURING COMPANY.

This correspondent has been supplied with a list of the principal rotary veneer cutters of Wisconsin and Michigan, many of whom cut this thin veneer for the purpose named from elm and other comparatively low-priced woods. B 591-When Is Kiln-Dried Lumber Dry?

Cleveland O (60%) 22 1913 Editor Hambwoor Ricono We are in receipt of a carboad of alleged kiln-dried lumber that we do not believe is dry. Who is the authority for determining whether this lumber is dry or not, and how shall we proceed to determine this fact?

The reply to the above communication has been made as follows: Perhaps the best authority on the subject of tests showing the dryness of wood is Samuel J. Record, assistant professor of Forest Products, Yale University. In Mr. Record's work entitled "Identification of the Economic Woods of the United States," he says:

"The water contents of wood can readily be determined in the following manner: Saw off a thin section of wood; weigh carefully on a delicate balance; dry in an oven at a temperature of 100° C, until a constant weight is obtained; reweigh. The difference between the fresh weight and the dry weight is the amount of moisture contained. Computed on a basis of the fresh weight:

Per cent of moisture $\frac{\text{fresh weight dry weight}}{\text{fresh weight}} \times 100$

"Thus if the weight of the original block of wood was twice the final weight, there was as much water as wood; in other words, one-half or 50 per cent of the original weight was water. The figures in the preceding paragraph are on this basis.

"Computed on a basis of dry weight: $\begin{array}{c} \text{fresh weight---dry weight} \\ \text{Per cent of moisture} = & \\ \hline \text{dry weight} \end{array} \times 10$

"In the problem cited above the loss of moisture was 100 per cent of the dry weight. This method furnishes a constant basis for comparison, while the other varies with every change in moisture degree. Subsequent references to the per cent of moisture will refer to computation on the basis of dry weight.

"It is impossible to remove absolutely all the water from wood without destroying the wood. Wood is considered thoroughly dried when it ceases to lose weight in a constant temperature of 100° C, though it still retains from 2 to 3 per cent of moisture, and if exposed to higher temperature will continue to give up water."

For practical demonstration of the dryness of the wood in question, would suggest that you employ the following method: Cut a couple of feet from the end of the 12" board, a section about ½" in length; take this thin section and leave it on a hot steam radiator for fifteen or twenty minutes; then leave the section on your desk for a matter of twenty-four hours. After this time, if the width of the section approximates the width of the board from which it is removed, the lumber may be considered commercially dry. On the contrary, if it shows a shrinkage of from ½" to ½" it is not dry.

The fact that the oil or water stain causes the grain of the wood to raise is no evidence whatsoever that the lumber was dry. As a matter of fact, it is evidence to the direct contrary. Had this been Kratezer-cured lumber even kiln-dried for but a short time, you would have had no trouble with the filler raising the grain.

Incidentally, wood that does not contain more than anywhere from six to nine per cent of moisture is regarded as commercially dry. That is, lumber should have about this quantity of moisture remaining in it when it is suitable to employ in the making of interior finish or furniture. Green wood contains anywhere from twenty-five to as high as seventy-five per cent of moisture, depending upon the kind of wood and the proportion of sapwood involved.—EDITOR.

Clubs and Associations

Interesting Program for Wisconsin Meeting

The fall meeting of the Northern Hemlock and Hardwood Manuraturers' Association as recently announced in Hardwood Ricoth will inheld at Eau Claire, Wis., on Wednesday, Oct. 29. The headquarters of the association will be the Galloway hotel and the sessions will be held at the Eau Claire Club.

The program includes reports on stock on hand Oct. 1, market conditions, standard sizes for hemiock, advertising, forest products exposition, insurance, log input, and woods wages. In addition, some excellent committee reports are being prepared on these subjects which will be of more than usual interest and value.

D. H. Tiemann of the Forest Products Laboratory at Madison, Wisa, who is recognized as an expert in wood seasoning, will describe his experiments in kiln drying lumber and a representative of the Chamber of Commerce of the United States will discuss the work of that important oreanization.

The visiting members following the meeting will have an opportunity of seeing the mills of the John H. Kaiser Lumber Company and the New Dells Lumber Company, which plants include a box factory and an Interior finish factory.

Chicago Club Entertains

On Wednesday evening, Oct 22, the Lumbermen's Club of Chicage entertained the wives and friends of the members with an informal dance and evening of cards and other informal entertainment. The entertainment committee had made excellent arrangements providing a very good orchestra for the dancing and also prizes for the card games. About fifty people were in attendance, some remaining on the dance floor, while others spent the evening at the card tables. Pool and billiard tables were thrown open for the evening without charge, and were well patronized.

Important Meeting Memphis Club

The regular meeting of the Lumbermen's Club of Memphis, held at the Hotel Gayoso, Saturday, Oct. 18, was well attended. Thereto there were a number of gentlemen present who were in Memphis to attend the red gum conference here during the forenoon. The usual luncheon was served.

The river and rail committee said that if was negativing with officials

The river and rail committee said that it was negotiating with officials of the Illinois Central railroad in regard to the payment of overweight charges at Memphis instead of through the Chicago offices, and that it had not outle completed this work.

The committee also reported that it had received information from Washington that the Willis bill, designed for the purpose of giving the Interstate Commerce Commission wider jurisdiction in connection with the weighing of lumber and other freight, was not complete and that it would be withdrawn. The committee also reported that another bill was being prepared and that when this was received it would proceed to carry out the instructions of the club regarding recommendations of such a character as to thoroughly protect the interests of shippers.

The committee also reported that the physical valuation of the railroads would be undertaken by the commission at an early date and that the United States had been divided into sections for this purpose. Chattanooga has been selected as the headquarters for the Southeast and Kansas City for the Southwest. The committee asked that it be authorized to secure one of the branch stations for Memphis and the desired authority was granted.

The statistics committee, through D. F. Heuer, read extracts from its report for 1912 showing the amount of lumber produced at Memphis and a number of other interesting features in connection therewith. This report has already been published in HARDWOOD RECORD.

F. E. Stonebraker, chairman of the committee appointed to furnish the rooms to be occupied by the Lumbermen's Club of Memphis in the home of the Business Men's Club, stated that it had been found that there would be 105 panels and that, as there were not enough specimens of hardwood lumber in this section to make each one of a different wood, it would be necessary to duplicate in some instances. He brought forth considerable applause when, out of deference to the delegates to the red gum conference, he declared that most of the duplications would be made of red gum.

The entertainment committee was authorized to take such steps as it saw proper in connection with the visit of the Indiana Retail Lumber Dealers' Association. The association will pass through Memphis Jan. 22.

At the completion of the regular business, President Pritchard extended a warm welcome to the delegates to the red gum conference, declaring that the Lumbermen's Club of Memphis was very much pleased with the privilege of entertaining these gentlemen. He called on a number of them for brief talks. W. E. Delaney, chairman of the red gum conference and president of the Hardwood Manufacturers' Association, expressed very great pleasure at being with the lumbermen of Memphis, whom he characterized as thoroughly aggressive and also as a little geotistical, as evidenced by the fact that they were taking steps at this meeting to bring a part of the government machinery from Washington to Memphis. He dwelt at some length on the great good to be accomplished by organization.

Withle he agreed that the lumbermen took tather long chance, he thought that they were quite as conservative as other busine, unon when everything was considered. It intimated that the dispection of a their part to take chances grow out of necessity rather than choice.

Discussing the red zum conference, he said that the name upa, object of the red gum conference was to find a larger marker and that the gentlemen participating therein would work seriously to this end. He said that one industrious gentleman had already discovered a new by product made of red gum, but the exact nature thereof, as well as the effects to be accomplished the reby, will hardly hear publication.

C. L. Harrison of Cape Grardeau, Mo., was introduced at the originator of the red gum conference. He said that he had taken this step because his firm was up against it, as it was in the neartien of a man trying to sell gold dollars at ninety cents apiece. He declared that gum manufacturers were going to put gum on the market in the right way and that they had come to Memphis, which is the center of the chief territory producing gum, to make the start. He thanked the club for the very cerdial hospitality shown to himself and other delegates.

T. W. Fry of St. Louis, Charles Thomas of Belzoni, Miss., and E. A. Lang of Chicago were called upon and responded briefly, expressing very great pleasure at being present, and referated the expressions of others regarding the hospitality shown to the various delegates. Mr. Lang took occasion to invite the members of the Lumbermen's Club of Memphis to make their headquarters with the Lumbermen's Club of Chicago when in that city.

Nashville Trade Visits Louisville

The recent visit of the Nashville Lumbermen's Club to Louisville was one of the most enjoyable events recorded in a long while. The Louisville Hardwood Club was the host of the Nashville men, and took the visitors in charge when they stepped down from their sleeper at seven o'clock in the morning, continuing the entertainment until midnight. The day's program included breakfast at the Seelhach Hotel; a visit to a number of mills in the southern part of the city; luncheon at the Louisville Country Club; the afternoon at the races at Churchill Downs; dinner at the Seelbach; the evening at Keith's vaudeville theater, and super at the Seelbach. The Nashville men indicated that they had had a good time, and are talking about arranging a trip to Memphis by both Nashville and Louisville clubs.

National Inspection for September

As indicated by the records of the National Hardwood Lumber Association, the inspection department officially inspected and measured 15,679. 862 feet during the month of September, 1913, which is a slight reduction over the month of September, 1912, and about 2,000,000 feet less than were inspected during August, 1913. The total earnings of the inspection bureau for the month amount to \$5,232,94, and the expenses and salaries of the inspectors, including the chief inspector, were \$5,920.82, so that the work was conducted at an expense to the association of \$887.88.

Philadelphia Exchange in First Meeting

The Lumbermen's Exchange held its first monthly meeting after the summer suspension, in Griffith Hall, on Oct. 9, in the evening instead of the afternoon as heretofore, this arrangement having been made the better to accommodate the business men and so assure a larger attendance. The experiment so far as one can judge from a single trial, bids At 6:30 a supper provided by the favorite caterer fair to prove a success. of the exchange, Mr. Wiener, and of which the menu was as usual particularly tempting was served, and the augmented attendance gave it the appearance of a jovial social gathering. At 7:30 the meeting was called to order by President Benjamin Stoker, who announced that with the object of giving to these meetings in the evening a social as well as business character, the famous Kindling Wood Quintette, with John E. Howes, accompanist, would open the session with some choice selections of music, a feature unanimously approved. After this special treat the regular business was taken up. After the reading of the minutes of the previous meeting, Amos Y. Lesher, chairman of the Forestry Commission, made his report. Thomas B. Hammer, chairman of the committee repreenting the exchange at the Atlantic Deeper Waterways convention, then read an interesting report on the work which is being done in that direction, after which Robert C. Lippincott gave the boys a little talk on some of the experiences of the lumber business running back fifty years. showing the wonderful advance made from the increased facilities in this branch of industry. His description of the old crude logging and transportation methods of that time was very amusing. It is the feeling of Mr. Lippincott that lumbermen as a rule are a broad, honorable set of men. John E. Lloyd, president of the William M. Lloyd Company, then aired some very sensible ideas as to the right and wrong methods pursued by the present day lumbermen, and made some ingenious prognostications as to how the lumber business may possibly be conducted in Mr. Lloyd possesses a teeming brain and his remarks were received with applause. President Stoker announced with pleasure that hereafter talks of this kind from the members and others would add to the attractions of these meetings. Frederick S. Underhill, S. Ashton Souder, John E. Lloyd and Amos Y. Lesher were appointed a committee to represent the exchange at the Fire Prevention Convention, to be held in this city from Oct. 18 to 18. After a few more selections from the quintette this meeting adjourned. The November meeting after the supper in Griffith Hall, will be held in the exchange room.

Plans for the Forest Products Exposition

A set of "Rules and Regulations" governing the Forest Products Exposition, to be held in the Colescium at Chicago next spring, has been used by Geolge S. Weed matager. This includes plans of the build may and surgestions for apportionion it of space; an outline of the class of exhibits which will come within the scope of the enterprise; and the Items of exposition will open at 10 a, m, and close at 11 p, m. There will be an adequate system of telephones. No gusoline, alcohol or other explosives will be allowed in the building, and no smeking except as specially provided.

A number of matters pertaining to the exposition were considered at the meeting of the committee at the Blackstone hotel, Chicago, Aug. 1.

Mr. Wood presented a detailed estimate of expenses and probable receipts, showing that with the amount of space available in both expositions practically all taken, the exposition will be more than self-sustaining.

A rate of \$1.00 per square foot for floor space was fixed by the committee, exhibitors to be assigned locations in the order in which their applications are received, the management reserving the right to assign such locations as may best suit the conditions.

A general admission fee of fifty cents will be charged. The experience of most industrial expositions has shown the necessity of charging an admission in order to control the character of the attendance and avoid unprofitable overcrowding. Each exhibitor will be given one free ticket of admission for every square foot of floor space controlled by him.

As the United States Forest Service, whose participation is desired, has no funds with which to provide for the same, it was decided best to investigate the possibilities of securing a special appropriation, either as an item of the Agricultural Appropriation bill, or as a separate measure, to permit the Forest Service to make a creditable exhibit of the many features of its work, which are of general interest to the people.

Favorable Report Northern Forest Fire Protective Association for Early September

Thomas B. Wyman, see relaty-torester of the Northern Forest Protective Association, offers a favorable report for Aug. 1 to Sept. 15. The report states that while weather conditions have been as a whole favorable, nevertheless the period has been characterized by a dry spell which was, however, partially overcome by opportune rains. During this period seventeen fires were reported, covering approximately 800 acres of land, of which 680 were plains and slashings, and 120 acres second-growth and sparse stands, mainly of pine. While 40,000 feet of standing timber was more or less damaged by surface fires, there was no actual loss systained.

The result of the vigilance on the part of the wardens is seen in the large number of applications for permits to burn brush.

One of the encouraging features of the association's work is that in a number of instances fires have been reported to the wardens after having been effectively pur out by the party reporting the fire. This illustrates that the efforts for co-operation with woods travelers are becoming successfull. A few fires burned for a considerable time without being discovered.

The matter of issuing camp leases, mentioned at length in the last report, has gained considerable headway and is being generally discussed. It is interesting to note that several land owners who had at first opposed the plan have advised the office of change of attitude. The plan will become effective within the next few hunting seasons.

The association has entered into an extensive campaign which will provide suitable signs to guide the woods traveler into proper roads and paths rather than keep him in the woods over night when it becomes necessary for him to light a camp fire. This greatly reduces the number of camp fires, and hence the risk of forest fires resulting from them.

or camp ares, and hence the risk of lotes fires resulting from technical Regarding slashings, the report says that there is no safety to remaining standing timber as long as the huge tracts of slashings are not cared for. No satisfactory method of disposal has as yet been suggested, and the timber owners are exceedingly lax in carrying out a definite system of slash disposal.

If plans are properly laid and carried out, there is no doubt of the feasibility of burning slash with safety to adjoining property. This, however, entails supervision by a man expert in the work of slash disposal, and the association offers to operators the best talent among its wardens for this particular service.

The report also suggests two other uses, one being the destructive burning of slashings in retorts, with the idea of saving the ash and its by-products. Another is the use of this material in the production of brown paper, for which purpose it is not necessary to remove the bark, and hardwoods can be utilized as well as the softwoods.

With the Trade

Memphis Concern Opens Chicago Office

The VandenBoom-Stimson Lumber Company, prominent in manufacturing and wholesale circles of Memphis. Tenn., has just established an

office in Chicago which will be occupied by its northern representative and salesman, E. R. Odle. This concern manufactures and does a wholesale business in a variety of southern hardwoods and makes a specialty of quartered oak for the manufacture of which it is unusually equipped as to experience. The stock which Mr. Odle will have to call upon will be an unusual guarantee to the trade, which he will solicit, as far as satisfaction is concerned.

Mr. Odle has had a varied and extensive experience in the lumber field and is well qualified to handle this business. He will cover Illinois, Wisconsin, Michigan, and probably later will enlarge his territory covering more of the northern district.

The new offices of the VandenBoom-Stimson Lumber Company will be at 1608 Gibbons building, the new building adjacent to the Steger building, on Jackson bonievard between State street and Wabash avenue. The company's telephone number will be Harrison 2962.

H. F. Arnemann Starts for Himself

H. F. Arnemann has since the inception of the company been in charge of the vener department of the Hardwood Mills Lumber Company, Monadnock building, Chicago. This concern handles northern and southern hardwoods in a very successful way and is considered one of the leading concerns in the local trade. Mr. Arnemann had entire charge of the veneer department and handled the stock from several large veneer mills. A week ago he severed his connection with the Hardwood Mills Lumber Company after due consideration and opened an office for himself at 522 Monadnock building. This change in policy will entirely separate him from his former business connection although he will probably handle about the same stocks that he has been handling in past years. Mr. Arnemann simply believed, as have a great many other men in the past, that he could better his position by taking up his work on his own responsibility. The change is in no way an indication of any lack of harmony between him and his former business associates. HARD-WOOD RECORD joins with Mr. Arnemann's many friends in the local trade in wishing him every success in his new venture.

Furniture Plant Moves to Little Rock

F. R. Slimmer of F. R. Slimmer & Co., Chicago, has recently closed a contract with A. C. Read, president of the Factoria Land Company, by the terms of which the Slimmer company will soon erect two large factory buildings in the new Factoria addition to the city of Little Rock. The buildings will each be 120 feet by 80 feet, and will afford more than 20,000 square feet of floor space.

F. R. Slimmer & Co. plan to move their entire plant from Chicago to Little Rock as soon as the new buildings are made ready for occupancy, which will be within ninety days. They will make various kinds of cabinets, giving special attention to the manufacture of kitchen cabinets and bookcases.

Mr. Slimmer, who has had several years of practical experience in this line, gives as his chief reason for coming to Little Rock that his operating expenses will be much less than they are at present. According to his estimate the company will make a saving from this source alone amounting to \$500 per month, and then he figures a great saving on the cost of material. At present he is paying \$2 to \$4 per thousand more for Arkansas woods in Chicago than he will have to pay for the same here. This is the first concern to be secured for the new Factoria addition.

The board of governors of the Chamber of Commerce has long since realized that Little Rock is destined to become one of the largest furniture manufacturing centers in the South. Its geographical location, its tributary territory and its closeness to the largest hardwood forests in the United States are bound to make Little Rock in time one of the leading woodworking centers of the country.

Large Mills Being Installed

The Tidewater Lumber Company and the Currier Lumber Corporation have built two samulls and two stave mills in Wise county, Virginia, and the Indian Creek & Pound River railroad is being extended six miles across the Kentucky border into Virginia to furnish an outlet for the product of the mills. The region is rich in valuable hardwoods which will soon be brought within reach of market.

Winter's Work to Begin

The new Dells Lumber Company at Eau Claire. Wis., is ready to begin the winter's work and the mill will soon start cutting both hardwoods and softwoods. The logs have been coming in for some time. The company saws whatever comes in, but it makes a specialty of Wisconsin birch. The mill has been shut down for some months.

Uses of Lands in Italy

Italy's total area is 70.820,197 acres apportioned as follows: Unproductive 7.4 per cent, tilled land 45.4, pasture 25.6, vineyards and orchards 4.9, forest 16.2. This leaves 7.4 per cent unaccounted for, and it probably consists of water surface, towns and cities, and the rights of way of highways and railroads.

Koreans Planting Trees

The almost treeless condition of Korea is rapidly changing under Japanese supervision. The natives have been taught tree planting and have carried it on with so much industry that many of the formerly barren hills are being covered with young growth, and large tracts of unproductive land are increasing in value.

Building a Band Mill in Virginia

A single-band mill and ten miles of standard gauge rathe of are among the improvements announced for the immediate future by the Mill are Lumber Company, near Millboro, Va. The company was recently in or porated with \$50,000 capital. The mill will have its own electric light plant and waterworks. This company's officers are J. M. Murdock, president; E. B. Murdock, treasurer; H. B. Murdock, secretary and manager, all of Johnstown, Pa-which is the company's office address

Dry Kiln Man Killed

H. E. Wofford, proprietor and manager of the Emerson Dry Kris Copnany. New York City, was killed instantly in an automobile accident near West Point, N. Y., on Aug. 12. He was on a business trip and was running the automobile which he had owned but a short time. Two boys found the wrecked machine and the victim at the bottom of a

H. E. Wofford was born at Woodruff, S. C., forty-three years ago. began in the business of manufacturing dry kilns under the direction of the late R. B. Andrews who was manager of the Emerson company. Mr. Andrews refired Mr. Wofford succeeded him at the head of the business, which under his management increased steadily. His long connection with the Emerson company made him very well known to the lumber trade of the eastern states,

The business of the Emerson Div Kiln Company will be continued as formerly with Wm, Limpert as manager. Mr. Limpert has been with the company for twelve years.

The reports of the unfortunate occurrence did not give the name of the deceased and this, and the fact that Mr. Limpert left at once to accompany the remains to Woodruff for burial explains why the trade press were not informed of the accident

New Mills in Mississippi

Operations are under way for the erection of C. R. Merrill & Bro's new mill at Lake, Miss. The mill when completed will consist of two separate units, one for pine, the other for hardwoods. One side of the mill will be in operation in December, the other side later. At Meridian Miss, the Usher Brothers have begun the erection of a planing mill with a canacity of 100,000 feet a day. It is part of the plan to build a hardwood mill. also to take are of hardwood stumpage recently purchased

Will Inspect Greenheart Timber

Clayton D. Mill, who until recently was an expert on wood structure in the Forest Service, has gone to South America to inspect greenheart timber which has been bought in British Guiana for construction of lock gates at Panama. It seems that some doubt arose whether all the timbers offered were genuine greenheart or something else. It is said that a number of trees pass commercially as this wood which are quite different from it. Mr. Mill's mission to the forests where the logs are cut is to protect the government in its purchases by separating the true from the spurious greenheart. He is both a wood technologist and a botanist, and it will not be very easy for the timber contractors in Guiana to put anything over on him.

A Wisconsin Timber Deal

One of the largest lumber transactions in Wisconsin in recent years was consummated when the Charles W. Fish Lumber Company of Elcho took over the holdings of the estate of John S. Van Nortwick. The holdings consist of 4,000 acres of the finest timberland in Langlade county Some of the best hardwood timber in the county is located on these lands which are accessibly located and most of the forties can be logged without the expense of building a railroad. The Fish company purposes to operate several big camps and cut from 30,000,000 to 35,000,000 feet within the next ten or twelve years. A large portion of the timber is hardwood. It will be shipped to the Elcho mill to be manufactured into high-grade lumber. The deal included the Sherry mill site at Koepenick. The purchase price was around \$60,000. The sale was the largest since the Chicago and Northwestern land was sold to the Oconto Company. The Fish company recently completed a modern hotel at Elcho. It is heated by steam, lighted by electricity, and has running water.

Wisconsin Concern Expands

The Wisconsin Woodworking Company, recently noted as being incorporated at Two Rivers, has consummated a deal whereby it acquired the property of the Two Rivers Manufacturing Company. Manufacturing Company was founded by Aldrich, Smith & Co. in 1857, which was succeeded in 1860 by Mann Brothers of Milwaukee. The plant grew to immense proportions under the management of the latter during nearly half a century. About eight years ago the concern got into financial difficulties and the creditors unsuccessfully tried to operate the plant. J. F. Conant, lately interested in a woodworking plant at South Milwaukee. leased the plant from the receiver about six months ago and began operations with twenty-five employes. At present about one hundred men are employed. Mr. Conant and Two Rivers parties have now organized a new company and have acquired the properties of the defunct concern. The products will be pails, tubs, wooden specialties and baskets, the latter a new addition but familiar to Mr. Conant, who was formerly engaged in that line.

Will Move Their Mill

to move its mill from Van's Harbor to Tronwood. Mich. where a large

Large Timber Tract Purchased

Ontonagon valley, near Ontonagon, Mich., has been purches d.b., John M.

To Operate New Spoke Factory

An additional spok factory will soon be in operation near Strongs, Miss., under the management of the Cookville Veneer Company. The machinery for the plant is about ready to set in place. The product will consist wholly of automobile spokes. The company has a spoke mill which has been at work some time, and the new installation will greatly be case.

Stack Lumber Company Incorporated

The Stack Lumber Company has succeeded the Escanaba Lumber Company, which concern for years operated a mill at Masonville, Mich, and maintained its headquarters at Escanaba. About two years ago plant of the Escanaba Lumber Company was destroyed by fire and since that time the company has been dormant as far as active operations are concerned. The new concern has the same others and stockholders as the Escanaba Lumber Company, namely: President, John K. Stack: vice-president, J. K. Stack, Jr.; treasurer, Richard B. Stack; secretary, Henry M. Stack; assistant secretary, William J. Casey.

The company has increased its capital stock to \$1,500,000, \$1,000,000 of which is common stock and \$500,000 preferred, the latter being owned by John K. Stack, who made a cash investment of \$500,000 in the husiness

Plans are being perfected under which a double band and double resaw or a double band and gang mill will be crected at Pike Lake or Masonville. The company owns an excellent mill site on the Little Bay de Noquet at Masonville and at the latter point also owns a hardwood flooring factory which, however, has been shut down for some little time.

The Stack Lumber Company owns approximately 90,000 acres of timberland in northern Michigan and fifty-five miles of standard gauge rallroad running into the timber. It is planned to erect a planing mill in connection with the sawmill and possibly a chemical plant will be erected at such time as it is demonstrated that it can be run success-

Opens Yard in East for Pacific Coast Woods

A. C. Dutton of the A. C. Dutton Lumber Company, Springfield, Mass., has closed a deal for a tract of land in Poughkeepsie, N. Y., which he will corvert into and use as a wholesale distributing lumber yard. It is the plan of the company to equip the premises specially for carrying a large assorted stock of Pacific coast lumber and shingles. This new venture is a direct result of and in anticipation of what the Panama canal will mean in the matter of handling Pacific coast lumber in the eastern and New England territories. Work on the premises is now being done and the yard will be ready for operation with the opening of the canal. The property has an area of about twenty acres providing space for storing upwards of twenty-five million feet of lumber. It has frontage on the Hudson river of about 2,000 feet with ample docks and deep water which will take care of the heavy draft vessels. The purchase price and improvements now under way and contemplated represent an investment close to two hundred thousand dollars.

West Virginia Plants Completed

The Suthill Lumber Company's mill at Marsden, W. Va., has been completed and has commenced operations. Several miles of logging roads have been constructed and two trains a day will supply the mill with logs. A large mill near Albrights, W. Va., owned by Wilson & Caffey, has been finished and will soon be in operation cutting a large body of timber located on the Cheat river in Preston county.

Panel Company Increases Flant

The Frost's Veneer Scating Company, Ltd., Shebovgan Wis, widely known as manufacturer of railroad and depot seatings, settees, car cellings, chair seats and all kinds of built-up veneered wood, announces that its new warehouse, while not yet completed, is under cover and partly occupied. The construction of this building has been going on for some little time, the company having planned to use it for storage purposes and also for the housing of its veneer driers, while the front part of the lower floor will be used as a shipping room. The main structure is 90 x 180 feet, being of two-story brick construction, while there is a one-story brick addition 28 x 61 feet.

Pertinent Information

Rates Equalized

A decision of the Interstate come, i.e. Commission rendered has work definitely settles the long standar controvers between New York and Boston relative to infant jets on a ports from foreign markets. The commission's decision place the two ports on an equal footing as far as western shimments on immorts are concerned.

Car Figures

Statistical bulletin is act of with an error Radway Association of Chicago on Oct. 22 gives the usual car surplus and shortage figures on the various reads of the country. According to the bulletin, the total surplus on Oct. 15, 1913, was 37,198 cars as against a surplus on Oct. 1 of 44,994 cars. The surplus on Oct. 1 of 1012, however, was but 22,810 cars. The total shortage on Oct. 15 of this year was 45,246, as against shortage on Oct. 1 of 31,020. The shortage on Oct. 10, 1912, was 54,389.

A comparison of the figures for Oct. 1 and Oct. 15 of this year covering both surphis and shortage would indicate a satisfactory increase in the total volume of shipments, inasmuch as there was a decrease in surplus amounting to approximately 4,000 cars and an increase in the shortage amounting to about 12,000 cars, on the other hand, according to the figures presented, there is indicated considerably less activity during the early part of October, 1912, as compared to a similar period in October, 1912, as the total surplus increased by 15,000 cars from Oct. 10, 1912, to Oct. 15, 1913, and the shortage decreased by 11,000 cars. This apparently unfavorable report is probably accounted for in a degree by the more favorable distribution of shipments of farm products this year than prevailed last year. It is not necessarily an indication of slacking in trade but on the other hand can be taken as a favorable indication of better management and can be taken as a favorable indication of better management and can be taken as a favorable indication of settle this year.

Increased Railroad Rates Filed

Railroads belonging to the eastern and central freight associations fled tariffs with the Interstate Commerce Commission on Oct. 14 and 15 proposing a flat increase of five per cent on all freight rates, except in some instances, those on coal and grain. In accordance with an arrangement between the railroads and the commission, the new rates were filed by the closing of business on Oct. 15.

The proposed advances was at once suspended. In most instances the roads themselves inclosed slips with the tariffs voluntarily suspending the increases until the commission shall have had opportunity to pass upon their reasonableness.

Commissioner Harlan, who will have general charge of the proceedings, has announced that he will endeavor to arrange for at least a pre-liminary hearing about Dec. 1. It is improbable that a decision will be reached before next spring.

The roads proposing the increase number fifty two, operating north of the Ohio river, and the changes in the rates mount up into the tens of thousands. The tariffs, representing an expenditure on the part of the roads of about \$300.000, have been forwarded to the commission by mall, express and special messengers. In aggregate bulk there will be considerably in excess of a half carboal.

This action on the part of the railroads created no surprise. It was well known that they intended to ask for permission to increase their rates, on the grounds that they have not been making enough money to carry on their business properly.

Old Rates Continue from Arkansas to Louisiana

J. H. Townshend, general manager of the Southern Hardwood Traffic Bureau, has just returned from Kansas City, where he went to attend the hearing before a special examiner of the Interstate Commerce Commission involving proposed increases in rates on hardwood lumber shipments from points in Arkansas and Louisiana to destinations in Missouri. Illinois, lows and Minnesota. The officials of the railroads which were a party to the proposed advances and the Southern Hardwood Traffic Bureau reached an agreement whereby the old rates would prevail so far as all members of the Southern Hardwood Traffic Bureau are concerned. The representatives of the bureau believed that they would be able to make such a strong case against the proposed advance as to prevent its effectiveness, but they did not contemplate such a complete victory over the railroads as indicated by the foregoing. Mr. Townshend was the principal representative of the bureau at this hearing. The Baker Lumber Company, George C. Brown & Co., the Fee-Crayton Hardwood Lumber Company and several other prominent firms in Arkansas and Louisiana are the direct beneficiaries of the compromise.

Building Operations for September

After the unfavorable report of August building operations, showing a decrease of 33 per cent as compared with August last year, the report of September building operations, shown in detail below, looms up splendidly. The statements from 69 cities received by The American Contractor, Chicago, reach a total value of \$556.749.572, as compared with \$555.529.932 for September, 1912. The gain is less than one-half of one

per cent, when compared with a year ago, but the surprise is that there is any gain at all - In 26 cities there are gains. The Duluth increase is 454 per cent; that of Grand Rapids 496 per cent; while Troy distances all other cities by a gain of 1,355 per cent. Other cities making excellent showings include Spokane, 217 per cent; Syracuse, 268 per cent; Toledo, 100 per cent; St. Joseph, 104 per cent; St. Paul, 90 per cent; Philadelphia, 56 per cent.

For the nine months ended September 30 the tabulation is encouraging. Returns 100m 63 etches show that building permits issued during that period totaled S783,349,016, compared with \$596,670,735 for the first nine months of 1912. This is a decrease of only 1 per cent. In detail the figures are as follows.

Hearing on Louisville & Nashville Switching

The much debated question of the switching regulations of the Louisville & Nashville Railroad in Louisville will be decided by the Interstate Commerce Commission in the near future, as the taking of evidence has been set for October 28 in Louisville. Lumbermen are particularly interested in the result of the case, which is being pushed by the Board of Trade. The Louisville & Nashville has refused to accept for switching to industries on its lines cars originating from competitive points, or which could have been delivered to the Louisville & Nashville at a junction point. This attitude is regarded as arbitrary, and shippers in all lines hope that the commission will see fit to require an amendment.

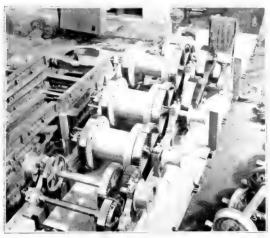

Perfecting Fireproof Shingle

The Wisconsin Forest Product laboratory at Madison is conducting an interesting series of experiments to make wooden shingles fire-resistant as a solution of the inhibition against the use of the ordinary shingle made by a number of cities throughout the country. The question of fireproof shingles is agitating the lumber trade and the finding of a commercially available process will be of immense importance. The laboratory has succeeded in making shingles fireproof by the use of chemicals, such as sulphate of ammonia and phosphate of ammonia, and placing shingles in solders and subjecting them to pressure, thus forcing into them these fire-resisting substances. The laboratory has succeeded in producing a fireproof shingle by this process at a cost of fifteen dollars per thousand and is now working on reducing the cost of operation.

Giant Electric Clam-Shell Outfit

The city of New Westmanster, B. C., has purchased an except a large 150 hers power electric neist for operating a causest to decrees.

The horst has these drains extained according to the "well (1d) tyring and is also equipped with a cool of type A bull where swinger (A) does have eighten much streets), models drain and the third tengency to twenty four incl. A (2004), is of cast steel, the moto, pare to the intermediate gears having cut teeth with special dust-proof casing. All drain gears are pressed on their shafts. Specifications call for a pull of 15,000 pounds at 250 feet a minute on a twenty four-inch drain. Each drain is continued with large and on the end outsity, triftion and [2].

AN UNUSUAL ELECTRIC HOIST.

with ratchet and pawl. The length over all, including swinging gear, is twenty feet; width over bearings of hoist is sixty six inches; weight of hoist alone is 35,000 pounds. With operating system this is increased to 38,000. The 150-horsepower motor is a three-phase, sixty-cycle, 220 volts induction motor with outboard bearing bolted to bed extension. It develops 720-700 revolutions per minute. The controller has a contactor panel which automatically throws in the resistance, making it impossible to start the motor above a safe speed.

In addition to foot-brakes, the hoist is equipped with the Clyde patent automatic mechanical brake. This brake is mounted on the end of the Intermediate shaft; its function is to prevent backward rotation of the gearing in the event of an interruption to the current.

The outfit was made by the Clyde Iron Works of Duluth for Taylor & Young of 513 Pacific building, Vancouver, B. C., trom whom it was ordered by the city of New Westminster.

Somewhat Primitive Conditions

The Turks and Caicos islands, a small group constituting a British colony in the West Indies north of Sante Domingo, do not present a promising outlook to business men who are seeking to extend trade in that quarter. Though the colony contains several thousand inhabitants, a recent report says "no building is in progress," There are no hotels, barber shops, dentists, running water, gas works, telegraphs, telephones; no cattle, only an occasional horse, few wheeled vehicles, except wheelbarrows. There is no fruit, no vegetables, no fresh ment, no coal, no ice, no fuel. The report, which is made by U. S. Consul Charles Forman, who is statiened on the islands, adds, "The islands are not prosperous." The only industry is talt making by evaporation of sea water by sun heat. The white in habitants number 280; the others are negroes.

Ozark Cedar for Germany

Cedar from the Ozarks is not only going into penells used in America, the wood is being sent to Europe in large quantities for the making of penells there. The mills of the American Lead Penell Company are now making quite extensive shipments of cedar logs, properly seasoned and dressed, for Hamburg, Germany. The logs are carefully hewn and seasoned at the mills before starting on their voyage across the sea. The cedar trees are cut on the vast tracts of that company's leased land in Tancy and adjoining counties of Missouri, and also in northern Arkansas. They are allowed to lie on the ground until well dried and then are left at the mill and after proper drying are sawed into shipping lengths. They are then allowed to season in the drying rooms of the mills until they can be shipped without danger of warping on their long voyage. It is usually two years between the time of cutting and the time of arrival at European ports.

Contracts Should Be Stened

trade to the new sity of a slend contract in ord, to 1 dd the asy r yard it should be being in raind that where the salestion earls open i

in itself is insulfacion to hold the bayer upon he recision or net real to accept the goods, unless the latter has according recognitions accept of the goods so sold, or paid one carnest money to outd the organ. This

"No contract to the sale of goods wares or in chandras in the can of the amount varies in different states or upwares day is ablowed to be good unless the lower shall actually receive and accept part of the contract of the

GENERAL OF A CHIORIZED

From the above it will be seen that unless to boy's indecement, conterms an unwritten contract, either in writing or by one act such as an actual neceptance of the goods of an act of owneship systemical over them, the selfer cannot enforce his contract of sale. The statute is inforce in practically every state and has been upde down the seperior courts on many ownessions.

A \$30,000 Skidder

\$30,000 for a log kidding machine? Who bought such a machine? Why was it purchased: Wby was it butchased: Wby was it suffer a such a log skidding machine a good investment? Everylody knows Francis Beidler, the president of the Santo River Cypress Company as a man that is always "from Missouri" and is always wide awake to new and improved machinery for logging or milling. He was the buyer. The Lidgetwood Manutacturing Company was the builder. The machine is not a new development even. It is a duplicate in design of two that have been in los or the events. It is a duplicate in design

A 830,000 SKIDDER

tions better than anything else it does pay to invest \$30,000 for an overhead cald-way skidder provided your logging problem is at all similar to M: Badders problem. A picture of the skidder is shown here.

This is commonly known as the "Battleship Skidder." It is really two skidders in one; a duplex skidder, if you pleas. It has two borders and two endines and two endoways and a loading boom that swings two ways. Some of the logs they lift with It weigh (wenty tons each. The cables each run out over a Houssand teet. They pull in whole trees. The logs are litted by a powerful loader and dropped on the curs. These cars pass under the machine and between the logs supporting the skidder. The timber is in the swamps by the side of the Santee river. The swamps are flooded several times a year. To give a continuous supply of logs at the mills, it was essential to build the railroad on piling throughout the forests; build it high enough to be higher than the highest water, and it paid. If it had not pull it would have been channed long are. Many suggestions have been made for cheaper appar-

They have all oven tried. They have been disearded, "Battleship Skidder" has won its place by sheer merit and the placing of an order by Francis Bendler for \$30,000 for a duplicate of those he had used for three years, speaks volumes

Chicago Wireless Station Contemplated

The Navy Department contemplates the erection of a powerful wireless station at North Chicago to match that at Arlington, Va., which is one of the most powerful an the world. Its principal tower is 600 feet high, and its range under favorable conditions extends to the Pacific ocean and an equal distance in all other directions. It is understood that the contract has not yet been let for the Chicago station, but announcement that it is in contemplation was made in the Consular and Trade Report of Oct. 2.

Press Comment on American Forest Trees

"Timber," published in London, England, makes the following review of American forest trees

Some months also we mentioned that a book on American forest trees was in process of preparation. This work, which proves to be a very valuable addition to our library, was written by H. H. Gibson, the editor of Harnwood Ricona, and edited by Hu Maxwell, the wool utilization expert Some months ago we mentioned that a book on American forest trees was in process of preparation. This work, which proves to be a very valuable addition to our library, was written by H. H. Gibson, the editor of Handwood Nicono, and edited by Hu Maxwell, the wool utilization expert. The matter contained in the work has taken up considerable time of both the author and editor for more than a quarter of a century, and has been issued more as a labor of love than with any expectation that it will be the second of the same of the control of the

woods themserves, as to which belong in the mind of disast.

The book, which is thoroughly well bound in dark green leather and cloth, is offered at 86 net, prepaid, and is well worth the money. Copies may be obtained by applying to Hardwood Record, Chicago, U. S. A.

Peanut Hulls and Sawdust

Lumbermen interested in saving all mill waste that is possible, have pushed sawdust wherever there seemed to be a chance of finding a market for it. One use was found in tin plate mills where sawdust is employed in cleaning the product. Now comes a Virginia peanut grower with a preparation made of ground peanut hulls, and claims that he has something better than sawdust for clearing tin plate. Bran is sometimes employed for this purpose.

Shrinkage in Hardwoods

It is well known that some woods shrink much more than others while seasoning. Few show less effect of shrinkage than mahogany, few show more of it than eucalyptus. Down in Louisiana some practical men have been investigating the behavior of woods of that region and the conclusion seems to be that chinquapin oak (locally known as pin oak) shrinks less than any other when used as axles for log wagons. Teamsters frequently cut a green stick, hew it in shape, put the irons on it, and supply a broken axle. It never shrinks sufficiently to loosen the irons, according to the testimony of teamsters. Osage orange or bodark is known as a wood that shrinks and swells very little. Wagon felloes made of it stand so well that tires never become loose, no matter how

hot and dry the climate may be. However, it cannot be said of any known wood that it will not shrink and swell. All that can be claimed is that some obey such changes in a much less or a much greater degree

Sawmills in Holland

The densely populated agricultural country of Holland is not a region where many sawmills or large lumber yards would be expected, yet according to a late report by an American consul at Scheveningen there are about 380 active saymulls in Holland, many of which have large lumber yards. The motive power is steam in most instances, but not in all. One lumber center which has twenty-five sawmills has six which are operated la wind nower and nineteen by steam. Five thousand persons in that country are employed by sawmills.

In 1833 there were only 417,671 acres of forest in Holland, but the area had increased in 1910 to 642,965 acres. All sandy soils, not worth much for pasture and field crops, are being gradually planted to commercial tumber. In spite of its small wooded area, Holland is actually exporting rather large quantities of its own timber to Belgium and Germany for use in the mines. In 1911 the country exported 1,469,603 tons of timber, equivalent to approximately 730,000,000 feet, but it was not all grown in Holland

The Dutch are natural lumbermen. They were once the greatest timber merchants in Europe When they established the Manhattan colony (New York) one of the first public enterprises was to build a wind mill to saw

Turkey to Build Houses

Turkey is undertaking an important enterprise which may mean a market for American lumber; but whether it does or not, it is a movement which will be watched with interest. The Balkan war drove many thousand Turks from their farms in Macedonia and other European provinces of the Turkish empire, and they fled into Asia Minor. of them carried nothing with them, and are homeless and destitute, Such things have often occurred in war, but generally the unfortunate refugees have been left to shift for themselves. The Turks are about to give a lesson in civilization which will be worth learning.

Large areas of vacant land suitable for farming belong to the Turkish government. The refugees will be settled on these lands, and 40,000 houses will be built for them by the government. They will also be supplied with agricultural tools and oxen to enable them to begin life over again.

The current reports that the Balkan allies depopulated large areas of conquered territory seems to have pretty good foundation in fact. Turkey would not build forty thousand houses unless they were needed.

Back to Wooden Ships

Steel is getting its bumps no less than wood, and the latest knock comes from some of the shipowners of Australia. Along the coast south of Sidney, where vessels are liable to receive rough usage on account of the condition of some of the harbors, the owners are seriously considering zoing back to wooden vessels, and two have already been ordered. The elasticity of wood enables ships of that material to stand rough usage which will soon put a steel vessel out of commission. Wood may not be so strong as steel, but in certain situations it will stand more,

A peculiar situation has come to light in connection with the contract for building the wooden ships in Australia. It has developed that timber suitable for ships is scarce in that country and hard to get. This will come as a surprise to most people, because it has generally been supposed that if Australia had plenty of wood for any purpose, it was for shipbuilding. A great deal has been written about the various elms, mahoganies teaks encelvats and numerous other hardwoods of that country; but it seems that when enough is wanted to lay Gown the keels of a couple of ships, there is trouble in finding it. The Australian shipbuilders can take comfort in the knowledge that the United States has large amounts of the highest-class ship timber on earth and will gladly furnish all that may be needed.

What Is Legal Tender?

The London Timber Trades Journal lays down some simple rules as to what constitutes legal tender, and the same rules will apply, with slight modification, in this country, because the common law here is about the same as in England.

When a merchant, in attempting to settle an account for freight, as to the exact amount of which there is a dispute, has his check refused and returned to him, or when the relations between the parties are such that it is possible that a check, if sent, will be thus ignominiously treated. the merchant should lose no time in making a formal tender of the amount which he admits to be due. If the tender is not made, and the shipowner brings an action for balance of freight, the merchant will, in respect of the sum admitted due, have to pay the costs of any suit the shipowner may take. As to the form of the tender, and the manner in which it shall be accomplished, strict rules prevail. In the first place, the payment must be of the whole debt. A tender may, of course, be made of a larger sum of money than the amount of the debt, but the debtor must not demand change. In the second place the payment must be in legal tender. In each case the money must, of course, be in the current coin of the realm. Having made up the requisite sum in this manner, so that it will not be necessary to ask for change, and preferably accompanied by a witness, he will proceed to the shipowner's office,

or if already authorized to settle the freight with his agent, then to the shipbroker's office. Here it is necessary that the money should be actually produced, the law attaching much importance to the production under the quaint idea that "the sight of it may tempt the creditor to yield." The creditor may, however, dispense with the production; but as the point as to whether the conversation amounted to a waiver of production or not is generally afterwards a cause of dispute, it is better not to leave such a question open. Furthermore, the tender must be unconditional and to make a tender accompanied by a demand for a receipt in full is to invalidate the tender. In one case a debtor said, "If you will give me a stamped receipt, I will pay you the money," and he pulled out the money as he spoke. The tender was, however, held bad for the condition. Where a tender has been made and it is refused it should be noted that it does not operate as a discharge of the debt, and the debtor must still remain ready and willing to pay the debt. The effect of the tender is to put the plaintiff in any subsequent proceedings in the wrong. "He is exposed," says a notable legal writer, "as the litigious oppressor, while the defendant stands forth as the virtuous citizen, who has all along been ready and anxious to discharge his liabilities."

Old Wooden Water Pipes

For years past old wooden water pipes have been dug up in various parts of Loudon. They date from a period long before the employment of iron for such pipes. The logs were bored, and preceded the modern stove pipes. They are in various states of preservation, and it is proposed to place samples in the British Museum. Some of them have come down from the eighteenth century. It appears that they have not been in active service for many years.

Looking Backward

On general principles there is not much to be gained by looking back, but it is sometimes encouraging because it enables us to see how far we have come. One of the earliest reports of the exports of forest products from this country was that compiled in 1806 by Albert Gallatin, at that time secretary of the treasury. The whole report did not exceed a dozen lines, and three of the items, constituting nearly half of the whole annual exports, are not now listed as products of the forest. These items were ginseng, ashes, and skins and furs. The complete list of exports for that year was as follows.

Oak bark and other dyes\$	42,000
Ginseng	139,000
Naval stores	409,000
Skins and furs	841,000
Ashes	935,000
Lumber, boards, staves, shingles, hoops, poles, hewed	
timber, and masts	2,495,000
_	
Total\$4	1,861,000

Ginseng is still an important article of export, and it has yielded a large moome from the first up to the present. It has always gone to China. The largest supplies have come from the mountain region between New York and Georgia.

Skins and furs are still exported, but not as forest products. Ashes have practically disappeared from the export trade. They were formerly valuable for soap making, but now the demand comes from manufacturers of fertilizers. The export of lumber has grown steadily from that time till this, with occasional variations. The annual export of naval stores is thirty times as much now as in 1806.

Red Gum in Syria

Red gum from Memphis, Tenn., and other southern markets, is finding its way slowly but somewhat surely into the cities of Asiatic Turkey, where it is in demand for furniture making. Five months or more are required for the delivery of the lumber after it is shipped. That is because direct transportation is not to be had. Some of the lumber first goes to Egypt where it passes through the hands of a middleman before it is forwarded to its destination, and other has a still more circuitous route, and first makes the journey to Bremen or Hamburg, and from there is transshipped to its destination.

The demand for furniture lumber in the cities of Syria is not large but is growing. Imports of ready made furniture are small. The natives prefer to have the manufacturing done at home. Skilled workmen are paid 8½ cents a day in the furniture factories or shops. The climate Is dry and roads are very rough. Furniture will not stand many or distant moves. The principal demand for it is in the cities among the better class of people. In remote country districts the small quantities of furniture in use are made of native woods, but in the coast cities dealers are anxious to use American woods.

Little Pianos Preferred

A trade report states that American planos find an unfavorable market in India, because they are built too large and high to make them popular with local customers who belong chiefly to European migratory classes. The main requisite for planos in India is easy portability. Most of the purchasers are officials connected with the Indian military and civil service and members of the foreign mercantile community, very few of whom have intentions of permanently residing in the country. Such persons are frequently obliged to shift their residence in accordance with instructions they may receive almost any time. Naturally, therefore, they prefer planos which can be moved about without undue expense

or damage and which could also meet with a ready sale in case of leaving the country altogether. Such persons consider planes not as investments, as they often do in other countries, but only as temporary means of amusement. The pianos desired are the cheapest makes possible consistent with good tone, and no planos are wanted widely are more than four feet high.

Tupelo Flooring

Another bit of evidence to prove the merit of tup-lo for durable flouring in exacting situations is contained in a recent better from Place Bross, deders in wholesal; lumber, in Boston. They say "You may be interested to bearn that this floor has not changed shape since it was laid three years ago; that it has withstood the wear in a retail lumber yard office; that it takes a nice pollsh and appears satisfactory. The entire floor was also drely clear of knots and stalin"

Soap from Horse Chestnuts

The soapy nature of the kernel of the horse chestnut has led investigators to search for a way to utility it in removing dirt and greates from textiles. Several methods of extracting this soapy substance have been patented. The kernel is said to contain about 6.6 per cent of a paleyellow oil similar to almond oil. After this has been extracted the residue, treated with diluted alcohol, yields an extract containing about fifteen per cent esculie acid, a saponaceous substance that has excellent lathering and cleaning properties. Prointable uses have also been found for other parts of the horse chestnut. The shell is rich in tannin, and may be used in preparing an extract for tanning leather. The material left after the oil and soap have been removed can be made into a white starch. When treated with cold water to remove the oitter taste it is suitable for food.

American Saws in Australia

Some of the Australian woods are nearly as hard as bone and where such timbers are handled, it is useless to equip a sawmill with any saws except the best. Little appears to have been said in this country on the subject of breaking into the Australian market, but American manufacturers have not been idle, as may be judged by a protest lately made in England that the saw market of Australia is being captured by Americans. The English naturally feel that the Australian market ought to belong to the home country; but the only way to hold a market is to give better goods or lower prices than competitors. When the Americans not only furnish better saws than all rivals, but at lower prices also, it becomes a hard game to beat.

 \boldsymbol{A} London paper comments on the situation, and offers the following advice to English saw makers:

"With all due deference to the makers of American saws, Sheffield productions can well hold their own. There is, however, one thing that we should like to impress upon members of the trade in Sheffield—that the Americans generally are very progressive as regards finding business; they know the benefits of advertising, and that sales of goods on their merits, though steady, are not so quick as when pushed by the catchy advertisement and the energetic man of the road. The words Sheffield steel have a true ring about them, and are known the world over, but it does not necessarily follow that the world will run to Sheffield; the town must sustain its reputation by advertising and by continuing to send its ambassadors of commerce throughout the world."

Utilizing Sanding Dust

It would seem that the fine sanding dust resulting from the manufacture of handles, wagon stock, etc., should find some profitable use. Users of wood flour say it is not suitable for their purposes, as it is too hard and coarse. Manufacturers of dynamite and of linoleum use considerable quantities of wood flour but to meet their requirements the flour must be extremely fine (200 mesh) and made from a light, absorbent wood, such as spruce or pine.

Wood flour for use in making marbicized fiber, however, need not comply with such exacting standards, and it is possible that the sanding dust of hardwoods might be used for this purpose. Manufacturers of such products claim that they have tried wood flour made in this country and find it unsuited to their needs. There is reason to believe that they obtained an especially low-grade product and it seems that no valid reason exists why we should have to import this material.

One use for hickory sanding dust is for polishing jewelry, but, of course, the amount consumed is very small. Another use that offers good opportunities is in making floor cleaner. Fine sawdust as well as wood flour is used in making this product.

Harvesting Ties in the Ozarks

The St. Louis Globe Democrat in a recent issue contains a rather intersting story of the evolution of the tie in the Ozark mountains. This well-written article describes the process of cutting out the ties of both the sawed and hewn variety from the rugged mountain country in the Ozarks. According to the report, the buyers and inspectors estimate that Missouri will market 4,000,000 or 5,000,000 ties this year. The Ozark ties are of black onk, white oak and pine, and are coming by river and by wagon from the various towns along the Ozark mountains. The drive is just ending at Van Buren. Mo., which brought out about 150,000 ties from the head-waters of the Current river. With those the town of Van Buren will ship about 500,000 ties for use on the Frisco and Iron Mountain railroad this year.

In describing the process of cutting them out the article says that they are cut and then hauled or "snaked" to the river bank and piled waiting to be east into the river. Then when the drive commences the inspectors and buyers check the ties. They are branded with the buyer's mark, the seller's mark and the cutter's mark, a painted circle, a cross, an initial or an odd-shaped figure at the end. As the drive nears the tie pile a chute from the bank is leveled off. In some cases these chutes are on a great level, one being 400 feet from the log pile to the river. The key log is knocked away, and the ties slip down a chute and hit the water, either floating free or dumping on some shoal or other obstruction.

Prices ranging from thirty to thirty-eight cents are paid for ties on delivery at Van Buren, Mo. When they are bought on the river bank an allowance is made for driving charges and the purchase price is from five to fifteen cents less. About 2,700 ties are used to the mile on ordinary railroad construction.

Still Plenty of Timberlands in Northern Michigan

A report containing a map of a portion of Wexford country, Mich., prepared by an employee of the Michigan Hardwood Manufacturers' Association, shows that the timberland area patrolled by this one man covers 120,000 acres. Of this 30,000 acres are still uncut and are owned by a lumberman.

Austrian Government Sells Ties

The government of Austria sells 1,500,000 ties annually, which ties are cut and finished up in the National forest reserves. The practice in the United States is well established of selling standing timber and down-timber on the forest reserves. It would seem that the example offered by the administrators of the Austrain National forests might possibly be followed here with profit.

Jamaica's One Sawmill

An American firm has built a sawmill in Jamaica which will soon begin operations. This is the only sawmill on the island, and it will have a capacity of 10,000 feet of lumber and from 5,000 to 10,000 shingles a day. The mill is located at St. Margaret's bay, seven miles from Port Antonio. It is proposed to saw mabogany (Swieutenia mahayoni), Spanish or West Indian cedar (Cedrela odorata), mahoe (Hibiscus elatus), greenheart (Sloanca jamairensis), bullet (Dipholis montana), satin-wood (Fagara favus), bony (Brya evenus), and lignum-vitae (Gudacum officinale). For export and local consumption. To meet local demands for lumber for building purposes other timber may be sawed. Shingles will be made chiefly from cedar. As there is not much timber in the immediate vicinity of the mill it may before long have to depend on timber brought by the railroad to the station, quite near the mill.

This mill offers to cabinet makers and furniture manufacturers in the United States an opportunity to test the value of some of the fine woods of Jamaica.

Hardwood News Notes

——≺ MISCELLANEOUS ≻—

The B Line Furniture Company of New York City recently became a bankrupt.

It is announced that the Bohon Buggy Company will start business at ${\bf Harrodsburg}, \; {\bf Ky}.$

The Dione Lumber Company of Bristol, Tenn., was recently incorporated with \$15,000 capital stock.

O. H. Keller Chair Company of Marion, Ind., has been succeeded by the Marion Chair Company.

The Rush Box & Furniture Company of Hawkins, Wis., has increased its capital stock to \$35,000.

The Fletcher Manufacturing Company recently began the manufacture of furniture at Nashville, Tenn.

The Kingston Wood Work Company of Kingston, N. Y., recently filed an involuntary petition in bankruptcy.

The Jasper Furniture Company of Jasper, Ind., recently changed its name to the Jasper Desk Company.

The Champion Wagon Company has been incorporated to do business at Owego, N. Y., with \$25,000 capital.

The Acme Wood Work Company has started business at New York City. This company is incorporated with \$6,000 capital.

The Moreland-Rix-McCreight Company of Pittsburgh, Pa., recently changed its name to the Rix-McCreight Lumber Company.

The Freeport Casket Company of Freeport, Ill, recently was placed in bankruptcy. W. B. Herlocker has been appointed receiver.

The Ovid Furniture Company of Ovid, Mich., has sold out to the Kirk-ham-Matson Manufacturing Company of Grand Rapids, Mich.

The Keystone Lumber Company of Scotts Hill, N. C., has been incorporated with a capital stock of \$50,000 to manufacture lumber.

The Rex Lumber Company is the style of a concern recently formed to do business at Washington, N. C. The company has \$50,000 capital.

The Sutton Folding Crate Manufacturing Company has been incorporated at Sutton, W. Va. The company has a capital stock of \$50,000.

The J. R. Wilson Lumber Company, Hendersonville, N. C., has been incorporated with \$25,000 capital stock by E. E. Alexander and J. R. Wilson.

The Hinkley Handle Company is organizing at Alanson, Mich. The company will have a capital stock of \$30,000 and will manufacture broom handles.

It is reported that a plant will be built at Hickman, Ky., by the Erie Basket Company of Lamington, Out., to manufacture handle blanks, weners and baskets.

The Eigin Silo Company is the style of a recently incorporated silo manufacturing concern which will operate at Eigin, Ill. This company has \$100,000 cupital.

The Templeton Lumber Company has been formed at Upland, Ind., by L. A. Prickett, F. C. Miller and Ethel M. Miller, directors. It has a capital stock of \$12,500.

The Beardslee-Graham Show Case Company with a capital of \$20,000 has been formed at Seattle. Wash., the directors being W. J. Graham, W. S. Beardslee and Frank Lanning.

A hardwood plant, including sawmill, box factory, and vencer machinery, will be built at Helcaa, Ark., by the Chicago Mill and Lumber Company. The plant will be located on a site of 100 acres.

At Bridgeport, Ala., a new spoke concern has been incorporated under the name of Bridgeport Spoke Works, with G. W. Williams and others as incorporators and with a capital stock of \$10,000.

The announcement is made that the Morgan Lumber Company of Jacksonville, Fla., contemplates the establishment of four or five sawmills to manufacture the timber on 30,000 or 40,000 acres.

The R. P. Walsh Tie & Lumber Company has been organized at St. Louis, Mo., with a capitalization of \$100,000. The incorporators are: R. P. Walsh, George C. Griffith and A. C. Hopmann.

The Waynesville Lumber & Timber Company was capitalized at Waynesville, N. C., with an authorized capital of \$100,000, of which \$10,000 has been subscribed by C. Y. Mayo, J. H. Anderson and others.

The capital stock of the Southern Box and Manufacturing Company of Birmingham, Ala, has been increased to \$100,000. The product of the concerns is excelsior, crates, boxes, and novelty woodwork.

The Wilson Cypress Company, Palatka, Fla., has completed a planing mill of iron, 90x200 feet, equipped with latest machinery, capacity of 60,000 feet a day, and expects to have it in operation very soon.

The Bernardin Timber Manufacturing Company at Kansas City, Mo., has been incorporated with authorized capital of \$300,000, and with J. M. Bernardin, Henry Koehler and Thomas A. Currier as incorporators.

A new incorporation at Celina, O., is The Celina Hardwood Manufacturing Company. A. R. Hunter, J. C. Malan, J. E. Randabaugh, E. Bourelle, B. A. Myers and Orel J. Myers are the parties at interest.

Incorporation papers have been issued to the City Lumber Company of Buffalo, N. Y., capitalized at \$10,000, the incorporators being George M. Stone, Jr. of Buffalo, Fred Degan, Lockport, N. Y., and Paul Heinrich.

The Palatka Veneer Company, Palatka, Fla., Wolfenden Brothers, managers, began operations Oct. 13, with thirty employes. Its entire output of orange box material, 5,000 boxes per day, is under contract for the coming year.

The Big Creek Lumber and Timber Company has been incorporated with \$25,000 capital to carry on a general lumber and timber business at Wirmsboro, La. The incorporators are E. A. Enochs, J. W. Lockridge and Eugene S. Enochs.

The Treas Lumber Company has been incorporated at Benton, Ky., by Charles Treas, Aberdeen, Miss., Cliff Treas, G. G. Treas, Trentie Treas, T. F. Treas and Guy Treas of Benton, and Mary E. Klotz of Memphis. The capital stock is \$17.500.

Incorporation papers have been secured by the Coldwater Timber Company of Huntington, W. Va. The business will be carried on in Martin county, Ky., with a capital stock of \$15,000. The concern is incorporated by C. M. Rochig, C. R. Comer, W. H. Cunningham and A. B. and S. J. Hyman.

— < CHICAGO >----

O. H. Burgoyne of Burgoyne Brothers, Hugo, Okla., spent several days of this week on a business trip to Chicago.

The October number of the Blue Book, published by the National Lumber Manufacturers' Credit Corporation, has just been received and offers proof of growth of that organization.

W. E. Trainer of the Trainer Bros. Lumber Company, Chicago, spent part of this week at West Raden with his family.

E. A. Lang of the Paepcke Leicht Lumber Company, and F. R. Gadd of the Wisconsin Lumber Company, Chicago, attended the meeting of the red gum manufacturers at Memphis, Saturday of last week. These two men are prominent in the forwarding of the best interests of red gum.

Charles H. Mackintosh, advertising manager of the Clyde Iron Works, Duluth, Minn., was one of the distinguished visitors to the trade early this week. Mr. Mackintosh says that his concern is meeting with excellent demand for its varied line of product, selling to loggers tracking out the country.

R. S. Kellogg, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, Wausau, Wis, passed through Chleago on Tuesday and Wednesday of this week, on his way to and from the meeting of the Michigan Hardwood Manufacturers' Association at Detroit

Floyd Day of the Day Lumber & Coal Company, Clay City Ky w Chicago on Oct. 16, stopping en route to New York.

A. B. Garrett, the well-known lumberman of Fort Madison, Iowa, spent several days of last week in Chicago on personal business.

R. S. Taylor and Shirley Taylor, Jr. of Taylor & Crate, Buffalo, favored Hardwood Record with a call on Oct. 13

HARDWOOD RECORD acknowledges receipt of a handsome paper cutter gotten our by Cobbs & Mitchell, Inc., Cadillac, Mich., and of a beautiful bronze letter clip of excellent quality from the Mitchell Brothers Company, Cadillac, both of which are designed as advertisements of the famous hardwood flooring manufactured by these concerns.

E. Bartholomew of John B. Ranson & Co., Nashville, Tenn., was in the city on lusiness several days or this week.

-----≺ NEW YORK >-----

The Rue & Lockwood tumber Company of Springardd, Mass, with branch office in this city, has made a connection with Mitchell Brothers Company of Cadillac, Mich., whereby it will hereafter handle its output of maple, birch and beech flooring in the state of New York east of Syracuse.

Claiming that the practice of making free lighterage of lumber in New York harbor was causing a loss of about 50 cents per thousand feet, the Central Railroad of New Jersey has made a new regulation, effective Oct. 1. discontinuing this service

Lewis C. Slade, a former president of the National Wholesale Lumber Dealers' Association, was a visitor in the metropolitan district during the fortnight

The Executive Committee of the National Wholesale Lumber Dealers' Association met at headquarters on Oct. 18 and discussed the work of the organization in its many departments. The Pridham case and the western North Carolina freight rate case were given special attention. The entire committee was present.

The Massee & Felton Lumber Company, hardwood manufacturer and wholesaler of Macon, Ga, has opened an office in this city. O. W. Brightman will represent the company in the general eastern territory and has taken desk room with C. S. Powell, 1270 Broadway, to which address all correspondence in connection with sales in this section should be sent. The company has a large trade in the eastern buying country and it is for the purpose of better serving its customers that the local office has been established.

R. H. Vansant, head of the hardwood manufacturing operations of Vansant, Kitchen & Co., Ashland, Ky., was in New York during the fortinght in the interest of business.

L. L. Barth, who is identified with the Edward Hines Lumber Company of Chicago, was among lumbermen visitors in New York recently. He was accompanied by Mrs. Barth.

John Kaul, prominent lumberman of Birmingham, Ala., spent a few days in this city last week with Mrs. Kaul. He had just returned from a three months' stay abroad.

Arthur E. Day, for several years in charge of the New York office of the Lumbermen's Credit Association, died early on the morning of Oct. 20 at Greenwich, Conn. Mr. Day was taken down with grip on Oct. 11 but improved rapidly under treatment. About a week later he made an effort to resume his business duties and suffered a relapse which led to heart failure. Mr. Day was a man of long experience in the credit field and was particularly successful in his management of the local Red Book office. He was thirty-six years old and married.

——≺ BUFFALO >———

A. J. Chestnut recently made a trip to his hardwood interests in New Hampshire. He has a new timber tract in view there, but as yet has not completed the purchase.

H. L. Vetter of the National Lumber Company left early this month for a two weeks' vacation which he expected to spend in hunting and fishing at Sodus Bay, N. Y.

M. M. Wall has been making a short business trip to Indiana, and J. B. Wall has been visiting the mills in the South in which the Buffalo Hardwood Lumber Company is interested.

Anthony Miller states that the hardwood trade is dull. On this account his yard is not receiving much lumber.

B. E. Darling has been in the South lately on a business trip. Blakeslee, Perrin & Darling say that while trade is not very active, the mixed-car business is quite satisfactory.

H. T. Kerr is cutting logs in the Pennsylvania woods at St. Mary's, where he has a large force of men at work. He expects to have a considerably increased stock of hardwoods this winter.

Hugh Stewart of Charleston, W. Va., who has been looking after the business of I. N. Stewart & Bro. there for the past four years, was a recent visitor to the firm's Buffalo office.

The destruction of the mill of Hamilton II Salmon & College will not long curtail the activities of that firm in this market. Manager F T Sullivan states that the mill will be rebuilt. He is unclose to account to the fire, which occurred after the mill was closed down for the dev. The loss amounted to about \$10.000.

Another mill are was that which damaged the plant of the Madigan Lumber Company, Dankick, on Oct. 16, to the extent of \$5.000. A large part of the machinery was damaged and some of the stock was destroyed. The fellows

→ PHILADELPHIA >

Daniel B. Curil of the D. B. Curil Lumber Company 8408—48 issuess is not up to expectation, but by constant hastling the company manages to 201 a fair share of orders. Weather conditions in Tennessee have seen tayor able, which has enabled it to keep its portable mills humming, but stocks so far are not accumulating.

John W. Coles says business is about as good as could be expected, considering the many obstacles in the way of progress at this time. It continues unperturbed, however, as to a not remote bett run in

E. M. Bechtel, sales manager of William Whitmer & Sons, Inc., a ports a modicum of trading right along. Buyers are still one consequence and sales are sporty. The ditheulty in getting money hampers assumes at this time.

It is announced that the Arcade building, Fifteenth and Mark t streets will change its name to the Commercial Trust building. Among the tenants of this building are Kirby & Hawkins Company, J. Randall Williams & Co., Rayner & Parker, Woodland Lumber Company, R. T. Jones Lumber Company, S. A. Clark and John Halfrenny.

J. W. Difenderfer of the J. W. Difenderfer Lumber Company, who has just returned from an extended stay at the mill in Tennessee, reports business only medium. He thinks no decided advance is to be expected until a harmonious adjustment of the currency agitation takes place.

W. A. Jackson of the Jackson Wyatt Lumber Company says aithough business in the large cities has been slow the company is zertifin very fair results in the suburban territory. Yards are not buying freely and in most instances they are using up their steek, which will soon compet them to replenish.

J. Elmer Troth of the J. S. Kent Company reports business fair but of a spasmodic character. Although there is nothing in sight to create ungasiness, any decided improvement in trading is dubious before next spring.

Eli B. Hallowell of Hallowell & Souder says business has shown some improvement of late; orders are coming in and inquiries are multiplying where cars are in transit and quick delivery is essential. Prices are somewhat off.

Charles G. Blake, manager of the Babcock Lumber Company, states that orders are small and hard to get, consequently more costly. Under these conditions business is only fair.

T. F. Dalrymple of the Thomas E. Coale Lumber Company says business has been very fair so far this year, but a slight falling off in sales of late is noticeable. Thomas E. Coale is absent on an extended tour of the Middle West.

John J. Rumbarger is out of the John J. Rumbarger Lumber Company and now associated with William Whitmer & Sons. Inc.

George M. Chambers, sales manager of the Kendali Lumber Company, Pittsburgh, and formerly manager of the Philadelphia office, was painfully injured in the recent wreck of a Pennsylvania railroad train en route to Philadelphia.

A. J. Cadwallader has succeeded to the business of George F. Craig & Co., of which firm he was a member. He will carry on the business under the style of A. J. Cadwallader & Co. Norman A. Ferry, for some years with Robert C. Lippincott, is now associated with the firm. The business of George Craig & Son continues as heretofore.

────≺ PITTSBURGH ≻───

The Hamilton Lumber Company reports its hardwood business in very good shape. Factory trade is fair and prices are good.

Secretary G. M. Chambers of the Kendall Lumber Company has Just returned from Donora, S. C. The Kendall company lately took over the big Donora piant formerly operated by the Flint, Irving & Stoner Company, and also the Thornwood, W. Va., plant of that company Mr. Chambers reports business first class and a good Inquiry coming in from all sources

The Pittsburgh Wood Preserving Company is making a rapid headway on its new plant at Reed City. Mich., which will be started late in the winter. Its other two plants at Orrville, O., and Councilsville, Pa., are running now with a capacity of about 500,000 ties a year each.

That Pittsburgh is still probably the largest consumer of lumber in the country is shown by the fact that the value of the manufactured product according to the last census is \$578,815,000, this being more than twice the value of the manufactured products of Cleveland, Detroit or Buffalo, and over lifty per cent more than the total of \$t\$. Louis, according to the report just issued by the Pittsburgh Industrial Development Commission

The Dawson Panp Mandactering Company is arranging to build a new plant at Barnesboro, Pa., to cost about 8500,000 and to employ from 500 to 4,000 people at the start. Among those interested are Attorney William F. Dill and William McPherson of Barnesboro.

J. B. Davis & Sons of Ursina, Pa., will shortly start cutting off a 2,000 acre tract of tunlor at Clayeland vity, just across the Maryland line. A six-mile single track railroad will be built to connect with the Jennings road, which will let the company out to the B. & O. at West Salisbury, Md.

The American Lamber & Manatacturing Company reports a sphendid call for oak bill stuff and thick ash. Manager Brown of this department says that prices are min and demand is very satisfactory.

C. E. Brettwieser & company announce that they are getting a fine out-of-town business in Lardwoods. Shipments are very good and prices are botton.

-≺ BOSTON >=

The Curtis & Pope Lumber Company, Boston, will build a brick mill and garage on Southampton street in this city, which is close by its lumber yard.

John Clary, for many years well-known in the lumber trade of Boston, died at his home in Cambridge, Mass., Oct. 6, at the age of eighty-six years. Mr. Clary has not been engaged in business for many years. For the past three years he has been suffering from paralysis.

J. R. Booth, a well-known Vermont lumberman, recently met with a bad accident at the mill in Ottawa. The mill was destroyed by fire a few weeks ago. The other day Mr. Booth visited the old plant and while there a heavy timber fell upon him and as a result his left leg was broken, together with other minor injuries. Mr. Booth is eighty-six years of age and is one of the veteran lumbermen of Vermont.

The large mill of W. H. Champlain at Rochester, N. H., was recently destroyed by fire. The power house and a smaller mill were saved, together with considerable lumber on the yard and loaded on cars ready for shipment.

It is reported that Stetson Cutler & Co. have purchased a controlling Interest in the Van Buren Lumber Company on the St. John river. It is said that the new owners will not assume control until the fall of 1914.

Frank H. Godfrey, son of L. N. Godfrey, a Boston lumber dealer, was married Oct. 16 to Miss Anna Jerome Townsend of Albany, N. Y.

----≺ BALTIMORE >-

Through the arrest of George Heintz the originator of a number of fires in lumber yards and woodworking establishments that have occurred during the past few months has been discovered. Heintz confessed setting not less than eight fires and is suspected of several others. He said in his confession that he bore no malice against the owners of the places fired and that he merely had an uncontrollable desire to see a blaze whenever he drank. He was held for the action of court.

Another one of the vessels to sail for South America with West Virginia spruce was the Italian ship Ascencione, which cleared here with 1,484,000 feet for Buenos Ayres, Argentina. G. Schlaffino & Co. were the agents of the vessel.

Richard P. Baer, senior partner of Richard P. Baer & Co., with offices in the tower of the Maryland Casualty building, returned week before last from a trip to Europe, very much rested and eager to get back to business. Mr. Baer sailed on Aug. 18 for London and came back on the Victoria Luise. He spent about four weeks in the United Kingdom and two weeks in Germany and Holland. Most of the time was devoted to recreation and sight-seeing, though he also gave some attention to lumber. Mr. Baer reports that he found the lumber trade abroad in the main sound and healthy, but that the high ocean freight rates constituted a serious check upon business. The ideas of the foreign buyers as to prices had gone up, but the advance was not equal to the rise in the freight rates, with the result that exporters stood to get less for their shipments than before, which precluded the idea of doing business. With the freight rates down, Mr. Baer thought that the export movement would attain fair proportions. Mrs. Baer went along on the trip and enjoyed it exceedingly.

Among the visiting lumbermen in Baltimore last week was R. W. Yewell, of the Butters Lumber Company, Boardman, N. C. Mr. Yewell is in charge of the shipping and office work at the mills, and states that the latter have been forced to shut down because of high water, due to heavy rains, which caused all of the rivers in that section to overflow. He reports that while considerable lumber has been made, the orders have come in with sufficient freedom to absorb the output, though some of the lower grades of cypress are perhaps a shade easier than they have been. The company makes a specialty of white gum, and Mr. Yewell says that it is having much success with this wood, which is worked up into flooring and sidings, and competes with other hardwoods.

H. T. Snyder, with Mann & Parker, Inc. Continental building, has just returned from a trip south as far as Florida. He was away eighteen days, spending four days of this time traveling, and he took up in that time fifteen cars of lumber, largely ash. He reports that he found southern mills with large stocks, one of them having about 15,000,000 feet and another perhaps 10,000,000 feet, but that orders were being received in sufficient number to take care of the production, though the quotations appeared to be rather lower than they were sixty days ago.

The West Virginia Pulp and Paper Company of Luke, W. Va., has won its suit against the Baltimore and Ohio Railroad Company and obtained a verdict for \$45.314.17. The Pulp and Paper Company brought action against the railroad for the destruction by fire attributed to sparks from a locomotive of about 60,000 cords of pulp wood at Buchannon, W. Va., on April 10, 1910, and sued for \$150.000 damages, placing the value of the wood at \$8 per cord. The railroad company made a motion that the plaintiff's festimony be excluded, but the court overruled this motion with the result stated.

Levenson & Zenitz, Inc., have let the contract for the erection of a fivestory brick and concrete furniture factory, to be erected at 10 to 16 North Frederick street, in the rear of the company's offices and show rooms, with a frontage of 100 feet on Frederick street, 92 feet on Gay street, and a doubt of 165 feet.

At Bryan, O, the Latle Lumber Company will enlarge its pilot effect several sheds to take care of its increasing business.

The recently organized Columbus Jobbers' and Manufacturers. Assertion has established a traffic bureau under the charge of F. H. Hysell, an expert in traffic matters. It is claimed that Columbus manufacturers have lost much in traffic matters and it is planned to give the minders of the organization advice and service on traffic matters.

R. W. Hotton of the W. M. Ritter Lumber Company i ports a good demand for bardwoods to their on factories and vards. He says it, do not bout evenly divided between the two sources. Prices are holding up well and the ear shortage is not interfering with shipments to any great extent.

F. Everson Powell of the Powell Lumber Company says that hardwoods show some signs of weakening and the volume of business is falling off.

I. B. Schneider et John R. Gebey & Co. says trade is ruting about a same. The demand for hardwoods is fair. Prices are firm and no week, ness of any consequence is reported. Dry stocks are only fair.

J. A. Ford of the Imperial Lumber Company reports a fair demand for hardwoods, with prices holding up well.

W. B. Sisons of the Sowets Leach Lumber Company says trade in hard woods is good for the season of the year. Prices are tarr in every way

---< TOLEDO >--

The success of the Michigan workman's compensation act, which has been in operation just one year from Oct. 1, was proven when Robert K. Orr, who has charge of the law for the state insurance department, an nounced that all employers operating under the state act would receive a twenty per cent dividend and that for the ensuing year there would be a reduction in rates amounting to sixteen and two-thirds per cent. The dividend will not be paid in cash, but may be applied on the premiums for the coming year. Orr declared that Lodo Michigan employers would soon be operating under the state law. This is of especial interest to Ohio operators owing to the discussion over the Ohio law, which is a political issue in this state.

"Business is still good with us," said President Booth of the Booth Column Company. "While we are not flooded with orders as we were earlier in the senson, we are finding time to eatch up and still have enough ahead to keep us going."

The Keasy Pulley Company reports that orders are still coming in at more than normal and the factory has all it can do to take care of the business now in hand.

The total value of the estate of John M. Skinner, former president of the J. M. Skinner Bending Company, is \$72,676.67, exclusive of real estate, according to an appraisement recently filed in probate court by H. B. Milmine, William Meyer and A. D. Perkins, appraisers.

===-≺ INDIANAPOLIS ≻=

The People's Manufacturing Company has been organized at Greenfield to manufacture refrigerators. Frank Cook is president; Marvin Fletcher. secretary, and Roland Stuart, treasurer.

Swings, chairs and folding beds will be manufactured at Elkhart by the Jacoby-Wiser Company, which has been incorporated with \$75,000 capital stock by Adelbert Jacoby, George L. Wiser and Mary E. Jacoby.

A planing mill and general lumber business will be conducted at Whiting by the newly organized L. Fischer Company, in which Magdalenn Fischer, G. J. Bader and F. J. Smith are interested and which has been incorporated with an authorized capitalization of \$25,000.

____ MEMPHIS ≻=

The plant of the Ferguson & Palmer Company, Paducah, Ky., which is now being erected at Houlka, Miss., is nearing completion and will be in operation within the next few days. The mill has been in process of construction for a number of months and is up to date in every respect.

The new mill of Russe & Burgess, Inc., will be in readiness for operation before the end of the current month. This information is based on a statement made by W. H. Russe, president of the firm. The plant will have a daily capacity of 50,000 feet of lumber and it will represent an increase of about fifty per cent over the old plant. The dismantling of the old plant began in July and the new mill has been installed in something like record-breaking time. The firm has been having its lumber sawed at custom mills while the new plant was being installed, but it will shortly be ready to resume its own cutting. Mr. Russe is a strong be liever in the future of the bardwood market, declaring that he thinks the outlook very good indeed.

The Cookville Veneer Company, which has its main office at Cookville, Tenn., and which has been operating a plant for the manufacture of automobile spokes at Strongs, Miss., is preparing to install another plant at that point. The machinery has already been ordered and is now en route. The company has a large quantity of hickory timber in that immediate

→ NASHVILLE > ———

I See B. & Mr. S. Arters of Shuttle blocks, have started operation of the about started about swenty operatives. The plant is located at Charlotte avenue and the Tennessee Central railroad. Jasper Hooper is in charge of the mills and as a recommendation of the mills are the started. The mills use degeneral and persiment exclusively.

The X theory of the Court of the Art Art Purdue of this city vice-president for Tennessee. Dr. Purdue announces that he will at once organize a branch association for conservation of forests and other resources.

The Leatherwood Lumber Company has been incorporated, with an authorized capital stock of \$1,000. W. W. Berry, N. P. LeSueur, E. A. Hail, E. A. Barr and R. W. Clawson are the incorporators. The purpose of the company is to manufacture lumber, buy and sell logs, cut logs and do a general lumber low-iness.

The Greeneville Chair Company has been financially involved and a general creditors' bill has been filed against the company at Greeneville. Tenn. The company does a large business, employing several hundred men.

and it is hoped will be able to adjust matters with creditors.

A new branch of the Louisville & Nashville railroad, from Iron City to Collinswood, is nearing completion. The new line will touch valuable timberlands in Wayne county yet undeveloped, and will result in some important operations in hardwoods in that section soon. The road is twenty miles in length.

Fred J. Roys, assistant manager of the Fullerton-Powell Hardwood Lumber Company, South Bend, Ind., and W. P. Schmubl, Evansville manager for the same company, were in Nashville, having been to Wayne county to inspect large timeer interests of the company.

──≺ LOUISVILLE >──

Owing to the extremely dry weather which has prevailed during the fall, as well as in the summer, forest fires have broken out in some sections of eastern Kentucky and are doing great damage. The state forester is organizing a patrol system which will limit the losses through preventing fires.

Col. C. L. Walker, superintendent of the sawmill and veneer mill of the Mengel Box Company at Hickman, Ky., is seriously ill with typhoid fever

S. M. Mapel & Co., Irvine, Ky., have purchased a large tract of white oak and popuar timber from Frank Park. It is located near Irvine. The buyers will put a mill on the property at once and begin the manufacture of the lumber.

James B. McCreary, governor of Kentucky, has designated Nov. 6 as arbor day and has issued a proclamation calling upon the people of the state to observe the occasion. In his proclamation he said: "In the last decade there has been great development along forestry lines in the United States. The inauguration of forest management in the various national forests, the activity of various states in public forestry, and the interest of private owners in tree-growing have resulted in marked improvement in everything connected with forestry. Every proper effort should be made for the renewal of our forests, and the attention of all the people, and especially the teachers and pupils of all the colleges and schools, is called to the importance of planting trees."

The sawmill of the Ford, Ky. Lumber Company was burned recently in a fire which destroyed many of the other buildings in the town also. Very little manufacturing has been done at Ford, which is on the Kentucky river, for some time, and it is not likely that the mill will be replaced.

=≺ ARKANSAS **>**=

Frank F. Fee of the Fee-Crayton Hardwood Lumber Company, with principal offices at Dermott, Ark., has returned to Arkansas after a tour over the African timber belt, where he inspected the supply of timber in that section.

The Grabt Lumber and Timber Company has recently purchased a million feet of oak timber in the vicinity of Leola, Ark., which will be worked up by the plaut at that place.

A. J. Tiplet and Tom Green of Forrest City, Ark., recently purchased from E. V. Mills of Heth, Ark., 1,500 acres of virgin hardwood timber in the St. Francis river bottoms. The consideration was \$25,000 cash.

Francis Kiefer, forest supervisor at Harrison, Ark., has received three applications for the purchase of 6,000,000 feet of white oak timber in the Ozark National forest reserve in Clebourne, Baxter and Stone counties. Arkansas. The lowest hid was \$3.75 per thousand and the highest bid was \$4 per thousand. The minimum value placed upon this timber is \$10,000, but it is expected that the timber will bring probably double that amount.

The classification work in the Ozark National forests has recently been abandoned and the camps have been broken up and the men disbanded. The classification plan was found to be impracticable after the work had been attempted for several months. The expense was too great to be justified by the results. For the past six years the service has been trying to devise some way by which the land in the forests could be classified, so that that which was found better for agricultural purposes might be turned over to the homesteaders. The classification plan was adopted. It was very expensive and practically the same procedure was necessary after the

It do did not to rebaild at New Richmond and the plant of the North Wisconsin Lumber and Manufacturing Company at Hayward was purchased from Edward Hines of Chicago. The Hayward was purchased from Edward Hines of Chicago. The Hayward plant lincheds a writer power and electric light plant and so are the company's twelty wear + apply of finder in Ashland and Bayneld countless. Now that arrangements for starting the industry in Hayward are accompleted, citizens of New Richmond are making efforts to regain the mill. It is said that they are offering a liberal bonus if the mill is brought down to their city.

The Hardwood Market

≺ CHICAGO >==

Continued quiet marks the local market. It is really featureless as far as any particular change over conditions two weeks ago is concerned, although, contrary to the situation for the last month or so, there is an occasional member of the local trade who seems to occupy a position that renders him decidedly optimistic. This does not mean that a tone of optimism prevails, although local lumbermen are decidedly cheerful. In fact, the frame of mind of most of the lumbermen today offers an interesting psychological study. It offers a striking illustration of the good effect produced by continuen hope even though long deferred in its realization. As a matter of actual fact, however, Chicago lumbermen are actually making a great many sales, the average sale being rather small in comparison to the average sale of more normal seasons. In the aggregate, the amount of lumber actually moving to Chicago consuming factories and yards is very fair.

As to prices, the local market is still somewhat off, even oak being several dollars below the market. Encouraging reports, however, coming in from various sources indicating absence of any great amount of dry stock at mill points seems to be having a favorable impression upon the minds of members of the Chicago trade, who can be said to be doing their best to combat any further shading of hardwood values. The future of the local situation, while still in doubt, gives promise of much more satisfactory conditions.

=**≺** NEW YORK **>**=

The New York hardwood market shows some signs of impresement, nothing to cause any great excitement, but noticeable nevertheless. Hardwood men returning from trips to mill points report conditions at that end as rather strong while the consuming markets show a better run of orders, though for small quantities, and stocks on band still below normal. The range of prices is well held at a fairly high plane and no falling off is anticipated in any branch. It is well recognized by buyers that prices will not go off and their failure to buy in larger lots is not in expectation of a break in prices. There are some slight reductions quoted in the hardwood flooring list but demand is on the increase and a firmer market will undoubtedly develop. Common and better chestnut and sap gum are the slowest features of the market and these, especially the latter, are subject to price cutting. The remainder of the list is firm.

—≺ BUFFALO ≻—

The hardwood trade is fair at present, but it lacks the activity of some years at this time. The influence of the tariff law is said to be one reason for this condition. Buyers are holding off to see just how the tariff will affect them. Most of the business is in small lots and the yards are doing something right along in mixed ears, for this market is favorably located. The eastern centers are taking a good aggregate amount of lumber. Prices are not as strong as they were early in the summer.

The plain oak demand is as usual the largest, although there is somewhat less strength in this wood than some time ago. Mills have larger amounts to offer and there is some price-cutting. Maple and birch are doing fairly well. Brown ash is another wood in pretty good demand. Some Canadian hardwoods are coming in, but the amount is not greater than ordinary. Lake hardwood trade is very small.

Talk is heard of a probable car shortage here this fall, but it is not expected to be felt to any unusual extent by the hardwood trade. Buffalo lumbermen are generally quite well favored as far as car supply is concerned, having the advantage of a number of railroads. Nobody has had much trouble as yet in delays to incoming shipments.

=< PHILADELPHIA ≻=

It is a recognizable fact that the general lumber business is more or less quiet, with the hardwood market steady. Consuming factories are busy but are buying only in quantities to meet immediate requirements. Orders naturally are small and hard to get, in consequence of which prices in some lines are less firm than a fortnight ago, but there is little apprehension as to panicky conditions in the near future as the various disturbing national bills are gradually being settled, enabling the merchant

to adjust his business affairs accordingly. The money market is trabe and collections are slow. Building operations are delayed for lack of equal as the banks continue to contail loans on these investments. Reports on the mill stock situation show affairs well under control, with no fear of a general shump in prices as the stock pile is rather under them ever normal and would soon be depleted at the first rush for stuff.

Oak holds steady; chestnut is fair; maple keeps a good reputation basswood, birch, elm and ash are in fair demand; poplar undring i mahagany and veneer netty.

——≺ PITTSBURGH ≻—

Buying has dropped off considerably during the past two weeks. Yard trade is winding up the season. Hardwood consuming factories are still buying considerable humber but not so much as in the summer. Railreads have cut down their regulsitions and are apparently waiting on the decision of the Interstate Commerce Commission regarding their application for a five per cent increase in their rates. If this is granted whole salers here believe that there will be a sharp increase in railroad buying of lumber. Prices on hardwood lumber, especially on oak and ash, are high and firm. Some maple is being sold at higher prices than prevailed in the summer.

==≺ BOSTON ≻=

Another uneventful two weeks has been recorded in the Boston hardand lumber market. For some time past dealers have been looking for
an improvement in demand but they are beginning to be more or less
discouraged. The large buyers are operating only as they need supplies
and with prices on a high level it is not to be expected that the small
consumers will anticipate their wants. There is no sign of any lower
values right away. All of the reports received from mill points indicate that stocks of good lumber are in small supply and that the manufacturers are firm in their ideas for firm to steady prices. The retail
yards are doing a fair amount of business and are using up the stocks
of hardwood lumber that they have on hand, yet cannot be induced to
buy far ahead of nearby wants. It is reported that there are fewer lots
of hardwood lumber being offered to consumers direct than was the case
a few months ago. The result is that buyers are making more inquiries
from the wholesale dealers than they were.

Whitewood and gum appear to be the easiest in prices. Quartered and plain oak are in very fair call and hold firm in price. Cypress has been selling in a moderate way. Brown ash is firm. Walnut is in demand with offerings small.

-----≺ BALTIMORE >=

The hardwood business has not been productive of important changes during the past two weeks. Orders are coming in rather more freely than might be supposed in view of all the circumstances, and prices are holding their own fairly well, though some casing off is said to have taken place and there is some feeling of hesitancy among the buyers. It is the effect upon trade generally which is reflected in the hardwood business. No one yet knows just what effect the tariff will have upon commerce and industrial activities and to what extent the demand will be stimulated or retarded for manufactured goods. As a consequence everyone is holding off as much as possible. The currency situation also tends to create uncertainty. Bankers are contracting their credits and the hardwood men, along with others, find themselves obliged to handle their resources with care. Money is more or less tight, and the range of transactions is narrowed accordingly.

Netwithstanding these drawbacks, however, little complaint as to the volume of business is heard among the hardwood men. There is no scarcity of lumber, but the offerings do not indicate congestion, with the exception of some divisions of the export business, where the available stocks are far more liberal than could be desired. A decided reduction, however, has taken place even there, and a better feeling prevails. With the ocean freights within reasonable limits, exporters would be in a position to make shipments at a profit, while now the increase in the rates during the year more than counterbalances the advances which foreign buyers are willing to pay. It is stated by the mill men that the excess in production at the present time is below that of corresponding periods of other years, and that they will enter upon the winter season, with its checks upon the output, with smaller supplies than usual. This is regarded as an indication favorable to an advance unless the conditions outside the trade that have been alluded to should be of a character to counteract the inherent strength of the hardwood lumber market.

----≺ COLUMBUS ≻=

While the season is fast waning, still the demand for hardwoods in this section is steady. Factories and yards are good buyers and the trade is pretty evenly divided between the two sources. Prices are firm, no marked weakness having appeared, and the outlook for the future is not bad.

Factorles making furniture, vehicles and implements are buying hard-wood stocks steadily although their orders are not very large. Automobile factories are buying wide sizes of poplar. Since building operations are continuing active, the demand from yards is increasing although they do not want large stocks because of the approach of the stock-taking period. Dry stocks are rather light and this is believed to be one of the

TRADE MARK

raetzer-cure

The cur shortage is interfering with shinlast tentures of the trule ments, especially from West Virginia points.

Oak is one of the strong points in the market. The demand is good for both quarter sawed and plain oak and for all grades. Chestnut is also firm and sound wormy is especially strong. Poplar is moving fairly well although stocks are accumulating in that wood. Ash is in demand and basswood is its moving well. Other hardwoods are unchanged.

=≺ CINCINNATI >=

There is very little wrong with the condition of the hardwood market unless it is the placing of orders in such small quantities. This manner of buying has been in force for a number of weeks and while the monthly average is gaining gradually, the hand-to-mouth process continues. The market is steady and the best posted dealers believe that it will remain so, gradually increasing until at least a normal stage of consumption will be reached. Wood consuming factories obtaining supplies from this market have been busy right along and there does not appear to be any real reason for a fall-down in the business of these plants who claim to be getting orders numerous but small in quantity and appear to be following out the same policy in purchasing rough lumber. They are carrying very little stock of their own but are getting promptly what they need.

All low grade hardwoods sell readily at satisfactory prices, the best sellers in this class of material being gum, cottonwood, poplar and basswood. No. 1 common and better poplar is not doing so well but in spite of light demand the price is well maintained. Red gum in upper grades is probably slowest in movement of all hardwoods but a reaction is looked for soon by dealers. Chestnut is gaining strength in No. 1 common and better, and sound wormy is again in active demand. Ash is one of the best sellers on the list, especially in thick stock. Plain oak, while more plentiful than a few months ago, is still leading and all grades are in demand at satisfactory prices. All grades of quartered oak except No. 2 common are moving satisfactorily, the latter as usual is in much less de-

---≺ TOLEDO >=

Activity continues on the Toledo hardwood market and buying is continuous and fairly heavy although nothing in the speculative sense is being done. However the building trades continue active, creating a lively demand for hardwood finish and flooring and factories seem to be running along normally. Poplar seems to be quite active in the regular sizes and plain oak is strong. Red gum is being used largely as a substitute for other woods and continues to gain strength in this market, furniture concerns being good patrons. The small home construction in Toledo has been the heaviest ever known and strangers viewing the city are struck with the large number of neat little homes already built and now under construction. These homes are all of modern construction and are finished with hardwoods

Prices are firm in all lines.

=≺ INDIANAPOLIS **>**==

In common with a general improvement in industrial conditions throughout the state, the hardwood industry has taken on more activity during the last two weeks. The situation now is more satisfactory than it has been for several weeks.

While prices have not changed materially, they have a steady tone and the demand for hardwoods probably is close to normal for this season of the year. The only discordant note is in the fact that car shortage at the base of the hardwood supply, makes it difficult to obtain shipments promptly.

All hardwood using concerns in the state, with the possible exception of the automobile industry, are enjoying a large business, in some instances better than it was at this time last year.

-----≺ NASHVILLE ≻=

The hardwood trade is holding up well in this market, with prices about steady. The orders are small, but in the aggregate amount to as much as for the corresponding time last year. There is little change in the character of the demand. Oak and ash are in the greatest request, with moderate demand for low-grade poplar and other lines. Chestnut

=≺ LOUISVILLE >=

While business is not all that might be wished, the volume of trade is nevertheless up to the average for this season of the year, and the outlook is regarded as satisfactory. Comparatively little buying on a large scale is being done, however, and this method of purchasing has resulted in the larger operators feeling that there is insufficient support for the market. Nevertheless, prices are being maintained well, and few lumbermen believe that there is any reason why concessions should be made. It is generally agreed that while the remainder of this year may see only fair business recorded, the opening of 1914 will mark a resumption of active trade, as the new factors in the general industrial situation will have been adjusted by that time and permanently favorable conditions will have been introduced into the situation. Quartered oak is a good seller just now, and plain oak is continuing to move freely. Ash is still going well, and cottonwood is also in fair call. Chestnut, poplar and

hickory are reported to be rather slow, as a general propes to a Most manufacturers have confidence in the situation, and are owner forefreely, expecting to continue to operate as long as weather obtained permit.

=> WISCONSIN ≺=

While there is a tend-ney on the part of hardwood consumers to buy neough to meet their present wants, the general activity in the building field all over the state has brought business up to a satisfactory point. Wholesalers are inclined to believe, however, that there will not be a general buying movement for stocking-up purposes until after the first of the year. The exception to this seems to be the average retail lumberman, who so placing some fair sized orders, evidently with the belief that prices will go much higher. The sash and door and interior finishing concerns are inclined to proceed in a "hand-to-mouth" manner when it comes to buying stocks, but the hardwood flooring manufacturers are well supplied with orders and are in the market for stock.

The demand for northern hardwoods is stronger and prices are stiffening somewhat in this line as a result. Birch and maple continue to be the leaders in the nerthern woods, although both rock and soft elm and ash are in good demand. Upper grade basswood is inclined to be slow, but low grade stuff is still selling well, due to the activity on the part of the local box manufacturers. All low grade hardwood sells fairly well.

Southern onk is holding strong and reports from the southern mills say that stocks of oak are light at these points. Both plain and quarter-sawed oak are in good demand and prices are holding firm. The call for oak from the furniture manufacturing concerns is stronger, as most of these plants are now busy.

The supply of labor in Milwaukee and surrounding Wisconsin cities is still far from large. Most local woodworking and furniture manufacturing concerns are able to secure enough men at this time, but the demand for men to work in the woods is now greater than the supply.

Northern Wisconsin and upper Michigan logging interests are now entering upon n busy logging season and the cut promises to be larger than in recent years, due to the fact that business has been good during the past year and stocks in first and second hands have been depleted. Camps have been opened all over the lumber country.

=< GLASGOW **>**=

The timber trade of Glasgow and western Scotland continues on a very quiet scale, new orders being very slow. The quarterly market reports are now published and from the trade statistics just issued it is noted that the total imports into the Clyde for the nine months to date exceed those for the same period of last year by about eleven per cent, while the overhead consumption is less by about seventeen per cent. The stocks remaining on hand are heavier by approximately nine per cent but it is seen that the gain is more than accounted for by increases In one or two particular items such as pitch pine, waney pine, birch and oak planks.

Storing is being resorted to in a few instances but brokers just now are doing their level best to get goods cleared up on an ex quay basis. Taken as a whole the movement into consumption is of a rather restricted nature. The general tendency seems to be to keep stocks down as much as possible so that buying in evidence is of a hand-to-mouth nature.

Not for a number of years has there been such a large output from the shipbuilding yards for September as during the present month when twenty-seven vessels of a gross tonnage of 78,453 tons were launched. This big total makes up somewhat for the comparatively small output last month which is exceeded by the present month by over 40,000 tons. The total for the nine months to date stands at 484.866 tons as compared with 472.706 tons for the corresponding nine months of last year. Work continues brisk all over the Clyde yards and there is a possibility of the year 1913 beating the record of 1912.

=≺ LIVERPOOL >=

The trade position here is very quiet, though the landings have been quite heavy. Prices have been much weaker in face of the heavy arrival. The prices, in fact, of some items are pence lower than those existing a few weeks ago. Almost every item is figured out on a lower basis, though ash is perhaps the firmest feature. In prime grades quite a brisk trade has been moving, though here again there are signs of a diminished output and lower prices in the near future. The recent labor troubles in Liverpool are mainly responsible. Though the matter lasted only a few days, it has seriously upset the railroads, and deliveries are moving very slowly to buyers. This makes prompt business exceedingly difficult and buyers are not keen upon making purchases when their stock may be hanging about the goods station for a month or more. There are some signs. however, that this trouble is being somewhat eased. The mahogany position seems to be clearing the state of mind of the rest of the trade. While the imports are still light, the demand has gone away to a very considerable extent. Prices are just standing still at the moment with no movement in either direction. The undertone of the market is, however, decidedly weak, though much depends on the extent of the import. The stock is firmly held by brokers here and any decline in prices will not be allowed to go much lower. The market is, however, just showing the weak tone of the other branches of the trade and values are inclined to go down in sympathy ..

EXCEPTIONAL

MAHOGANY, CIRCASSIAN WAL-NUT AND QUARTERED OAK

VENEERS

If a good veneer cutter can manufacture fair quality veneers with antiquated machinery, what can he do when given the latest and most efficient equipment?

The Answer

is to be found in any of the stock produced at our new mill, which is the last word in modern equipment.

We have selected the finest logs on the market, our men are experienced and capable, the product speaks for itself.

See our samples and get prices.

Visit Our Plant

Any time you are in Chicago and want to see the most modern veneer plant in existence today, we will be glad to show you through our plant.

Fred W. Black Lumber Co. 2245 S. Fortieth Ave. Chicago, Ill.

You Know Something About the Land of Last Supply

You know, of course, that the nearest source of adequate lumber supply are the forests of the west, the inter-mountain pines and the fir, spruce, cedar and hemlock of the Pacific Coast.

In a broad sense, we are at the beginning of an era of

Competitive Demand for Western Timber

Mills of the South are exhausting their supply and are seeking new locations.

Timber is disappearing from the market, but not so rapidly now as it will on a constantly increasing scale during the next decade. Every tract taken off the market decreases the supply and increases the desirability and value of those remaining.

The best go first. Investigate now.

James D. Lacey & Co.

Timber Land Factors

Chicago, Ill., 1750 McCormick Building Portland, Ore., 1104 Spalding Building Seattle, Wash., 1009 White Building

WHY?

WHY do more than 380 of the most prominent and successful lumber manufacturers exchange nearly \$30,000,000.00 of indemnity against fire loss at

Manufacturing Lumbermen's Underwriters

BECAUSE!

BECAUSE it is the oldest and strongest inter-insurance association among lumbermen, being now in its fifteenth year.

BECAUSE \$978,432.40 cash savings have been returned to members.

BECAUSE \$856,831.32 cash surplus, owned entirely by the members, has been accumulated.

BECAUSE \$2,443,029.00 has been paid in losses under prompt and equitable adjustments without resort to quibbling or technical controversy.

BECAUSE it was the first to settle lumber losses on a market value basis.

BECAUSE the regular, frequent and thorough inspections given the plants of all members help them to prevent fires, thus materially reducing both the fire waste and the cost of indemnity.

American Forest Trees

By Henry H. Gibson

Edited by Hu Maxwell

"AMERICAN FOREST TREES" is a comprehensive work of more than seven hundred pages, illustrated by more than one hundred full page pictures of forest types of tree growth, and hundreds of minor pictures.

It answers every question worth asking about the infinite variety of forest growth in this country, and the utilization of these woods in lumber and other forms. The opinion of an

expert on this work is:

"AMERICAN FOREST TREES" is the foremost contribution that has ever been made to American forest and lumber literature.

The price of this work is Six Dollars (\$6.00) net. It will be sent on receipt of price, prepaid, subject to return and refund of payment if it does not prove satisfactory.

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak. We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

A Fine Opportunity to Dispose of Narrow, Short and Low Grade Oak

To the oak lumber manufacturer who accumulates considerable oak lumber that can not be sold unless they put a price on it that is so low that there's no money in it, there is now offered a fine opportunity to dis-

pose of this lumber by making it up into oak flooring squares like the illustration.

These squares are jointed together without

Linderman Automatic Jointer Gluer, Clamper and Sizer

squared to the exact width. A straight tongue and groove is then cut on the two sides and ends. The demand for these flooring squares is greatly in excess of the present output. Still there

are several Southern manufacturers making these flooring squares.

One New York firm wants a good many car loads of the Linderman Flooring Squares. The prices it offers will net you, delivered New York City, practically as much as you are getting from the better grade of oak lumber.

With televal of the limber of the second secon

Write today for further information and we will give you the details of the market, manufacturing costs, etc. You're not obligated in any way in asking for particulars, yet it might be of value and worth your consideration.

OR DISCRIMINATING BUYERS wanting a Clear Board for first class shelving and other similar purposes there is nothing that will surpass our CLEAR HEMLOCK. It is bright in appearance, light in weight and is odorless and durable. We make it in 6", 8", 10" and 12" widths, as also 13" to 20" wide. In addition to this, we have all other grades in Hemlock Boards. Also you should try the soft quality of our Smoky Mountain Chestnut. In No. 1 Common and Better grades we can supply it 60% 14' and 16' lengths. The widths are most desirable and the manufacture perfect. Also we have a nice assortment of 5/8" Panel Poplar 28" to 36" and 36" to 44" wide or can be assorted in widths as may be desired. This is the genuine soft yellow Smoky Mountain Poplar. Also do not forget we are in position at all times to cut to order high grade Poplar, Ash and Maple.

All of the above stock is nicely manufactured, being band sawed, trimmed, and well seasoned. We are prepared to quote attractive prices for this material for immediate shipment.

BAY CITY, MICH.

, Why We Can Give "Value Received"

We own one hundred thousand acres of the best virgin Southern Hardwood timber.

We operate large band mills at Huttig, Ark., and Deering, Mo.

We cut FORTY MILLION feet of hardwoods annually and carry 15,000,000 feet IN STOCK.

We sell only stock cut on our own mills and so can GUAR-ANTEE the quality of EVERY shipment.

We ship high grades that increase the size and percentage of your cuttings, reduce factory costs and shrink the waste pile. Therefore:

We can SAVE YOU MONEY on every shipment of oak, ash, gum, elm, cypress, tupelo, hickory, cottonwood, sycamore, soft maple and dimension.

LET US PROVE THIS ON YOUR NEXT ORDER

CHOICE BIRCH AND MAPLE—10,500 ACRES

I offer the above tract of best quality and splendidly located timber in Ontario, ten miles from Sault Ste. Marie, Ontario, a town of 25,000 population. Will cut 90% birch and maple. Estimated by George F. Beardsley, cruiser of Grand Rapids, Mich. Location and mill site on deep water. Can ship either by water or rail. Lands in fee simple—no crown dues, no export restrictions. Close to American Soo. Easy logging. Reasonable price and terms.

William H. Ranson, Sault Ste Marie, Mich.

A floor to adore

For thirty-three years Wilce's Hardwood Floering has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for bilind nailling—you'd find it reduces the expense of laying and polishing.

Our Bookles tells all amout Burdwood Flooring and how to care for it—also prices—and is free

Atkins Always Ahead

It's ATKINS INSERTED TOOTH CUT OFF SAW—McLEAN PATENT. The biggest sensation in the Saw World for years. The smoothest, fastest cutting Saw you have ever seen. People say they are "worth four" ordinary Saws.

If you use cut-off saws, then you will want to know about this one. If you are proud of your equipment and ambitious to use the very finest of everything, then you will want one or more of these Saws.

Write the nearest address below and let us tell you what they will cost and what they will do.

ATKINS SILVER SAWS

If you use Band, Circular, Cross-cut, or any other kind of Mill Saws, you will be interested in hearing what we have to say about ATKINS SILVER STEEL.

If you use Machine Knives of any type whatever, you should know why Atkins Machines Knives made of Atlas Steel will prove the most economical for you.

If you conduct a filing room, then you certainly should investigate Atkins Saw Fitting Tools, Atkins Ideal Swage—which is unquestionably the finest in the world—Pribnow Swage Shapers, and a thousand and one things used about the filing room.

Come To Us With Your Saw Troubles

Let us know your problems, if you have any. Perhaps we can offer some solutions. Get in touch with the SILVER STEEL SAW People. It may pay.

Newest Hoosier Band Saw Mill

We have been building band mills for thirtyfive years and this New Hoosier Band Saw Mill represents the experience of these years.

The simplest mill in construction and the easiest kept in order.

We build this mill in three sizes, 6, 7 and 8 ft. The widest saw the 6 ft. mill will carry is 10"; the 7 and 8 ft. mills will carry 10, 11 or 12" saws. This mill is built in a substantial manner and embodies all that is latest and best in Band Mill design. The base is of the heavy extension pattern and is so constructed

that it does not overhang the foundation but extends completely around the mill. By means of the construction of the column the upper wheel runs in the center of the mill and is supported both above and below the mandrel. The bearings are long and are chain oiling.

The tension device has roller bearings and is very sensitive and durable. The upper guide is raised and lowered by power and is nonbreakable. The lower guide is so arranged that it can be opened quickly. The roll back of the saw is power driven.

The 6 ft. mill will split a 48" log and lay down a 30" board between saw and column; the 7 ft. will split a 54" log and lay down a 36" board, the 8 ft. will split a 57" log and lay down a 42" board.

Review and Outlook

General Market Conditions

IN ADDITION TO OTHER UNDESTRABLE INFLUENCES, trade conditions in general throughout the past two weeks have been affected more or less by a further circumstance, namely, the political agitation which has been fairly keen pretty generally throughout the middlewestern and eastern states. In New York especially there has been a fight which will go down in history as of extreme importance to that community. The importance of the struggle was so fully recognized that it engaged the close attention of the entire community with the result that it had some direct bearing upon actual business conditions. However, New York was but one instance of the many cases where politics has had its effect, so that in the aggregate it can be said that the political turmoil has added to the general uncertainty of the business situation. However, this influence is now a thing of the past and one more reef has been safely essayed so that the ship of business is now a little nearer to the safe harbor of normal business conditions.

To say the least, reports are conflicting as to the general economic condition of the country, business conditions in a broad way and the lumber business specifically. Such men as J. J. Hill, former president of the Great Northern Railroad and well-known as a leader in a big business organization, have issued statements comparatively recently tending to indicate that the very trend of business is wrong, and that until we get headed in the right direction we cannot hope for much more encouragement. On the other hand, we have promising reports from other industrial leaders and excellent statements from various communities as to building operations and probable returns. For instance at Memphis it is stated that bank clearings exceeded the clearings for October, 1912, by over \$2,000,000, and that actual shipments of cotton and prices received were most gratifying.

We are warned, however, by those who are prone to affect a thorough understanding of the deeper phases of business in general that the recent developments in Mexico must be taken into account, and that they will have a grave effect upon the progress of commerce in this country. It is stated that in the event this country were drawn into a conflict with Mexico it would cost a million or two dollars a day, which would have to come from the people, with the result that there would be less money available for ordinary business and industrial activities. Unquestionably a conflict of this sort would be an expensive one, but HARDWOOD RECORD is of the opinion that it would not have any very material bearing on the financial situation of the country. In fact it is altogether likely that provision has already been made to finance any effort of intervention that might be made, without disrupting business.

Generally speaking, there is not much change in the aspect of the

country's condition, and this can also be said of the lumber business. The positions of the various woods continue to be about the same as they were two weeks ago, and the demand from the various sources is about in conformity to demand as last reported. It is unquestionably a fact that the comparative scarcity of money and the indisposition on the part of the bankers to finance industrial and business propositions at a reasonable rate of interest is being felt in building circles. This is especially true of speculative building, such as flat buildings, two-family houses, etc., which of course really does have a direct and noticeable effect upon the lumber business as far as building lumber is concerned.

It is unquestionably true that buying is off, but hardwood men as a general thing are not reporting the same condition as are concerns manufacturing and dealing in building lumber alone. In fact, as far as values are concerned hardwoods continue to offer a solid front. Prices have not improved nor are they likely to improve in the immediate future, but with the present condition of stocks at the mills and the entire likelihood that this condition will continue indefinitely, there is no reason to believe that millmen will make any further

In the South favorable operating conditions have allowed the millmen to secure a very nice assortment of stock, but nowhere is there any report that the supply is at all a justification of alarm, and in fact, it is fairly generally reported that the actual amount of lumber on hand is not above normal.

The recent reports of the two northern associations offer excellent proof that stock conditions at the northern mills continue to be entirely in accordance with the desires of northern operators. A further proof is seen in the complaints of the wholesale element that they cannot secure the stocks they want at the prices they are willing to pay, which would indicate without much chance of doubt that there is nothing remotely resembling a condition of panic among northern operators.

Recent developments aiming toward an organization of the gum interests, and facts brought out at the recent conference of gum manufacturers, has had a favorable effect upon the gum situation. As heretofore reported, it was developed at the conference that the actual stock on hand was not nearly as alarming in its total quantity as was expected. The prospects of an organization, the purpose of which would be the broadening of the demand for gum, has had a still further favorable effect upon the holders of red and sap gum, and it is highly probable that with the definite organization, that in all likelihood will be effected on the fifteenth of this month, actually a fact, the position of this most excellent wood will be still further strengthened. It is off now, but the feeling is slightly more optimistic regarding the fature prospect of gum than it has been for some little time.

In oak there has been a really noticeable improvement in the lower grades, without any corresponding weakening of the upper grades. The better grades of oak are still slightly off, but there is no logical reason to believe that there will be any further weakening.

The lower grades of gum, cottonwood and poplar are seemingly having an excellent call from the box makers, who seem to be doing an active business.

Without being unduly optimistic, it is safe to say that the last two weeks have brought forth no new developments that could be used as excuses for the belief that the lumber business is in any worse shape than it was two or three weeks ago. It is true that promised renewal of activity has not yet begun to materialize, but it is also true that no further stagnation has been noted and the policy seems to be a waiting one with the multitude of small orders and without any apparent tendency on the part of the buying trade to commit itself to the purchase of any large blocks of stocks. It is entirely likely that this situation will continue to be predominant for some little time to come.

The Prophecies of James I. Hill

J AMES J. HILL, THE VETERAN RAILROAD BUILDER, and a specialist in statistics, sounded a note of caution, if not of warning, in a speech delivered at a recent meeting of bankers in Chicago. The point in the leading paragraph of his address was that "less than a year's subsistance stands between man and starvation." To prove his point he quoted figures showing production and consumption of wheat, and he showed that the margin of safety, on the face of the returns, is small.

There is nothing new in this. The world has had only one year's supply of food ahead at a time since the earliest records of civilized man. Barbarians and savages seldom have that much, and often food for only a day or two. It took extraordinary exertion in the time of Joseph for the Egyptians, on the most fertile land in the world, to grow enough grain in one year to last two. The farmers, considered for all countries, have never produced much surplus of grain, and they are not doing it now. It is not necessary that they should. There is no occasion to lay by vast stores of food, beyond the year's needs. It would deteriorate, mildew would attack it, worms would infest the granaries, and nothing would be gained in the end. We expect seedtime and harvest to continue. If some great extramundane catastrophe, like the Glacial Age, should blast the land and upset nature, we would all have to die anyhow, whether we had an extra supply of wheat laid by or not, but this state of affairs is not anticipated.

The famines of ancient times and of the middle ages were due to lack of transportation facilities rather than to universal, or even a very general, failure of crops. A rainless season in a certain region brought famine because supplies five hundred miles away were entirely inaccessible. That cannot happen now. Grain can be carried half way round the world without prohibitory increase of price. There is no immediate cause for alarm on account of threatened drought or because of exhaustion of soil of farm lands.

If the ordinary sources of fertilizers and the nitrate beds of South America should prove inadequate, the by-products of coke ovens, the saving of which is now well understood and extensively practiced, will meet much of the need for fertilizers; and if that fails, the fixation of atmospheric nitrogen has no limit, as far as science can predict. Grain crops cannot fail, through sterility of land, as long as the earth has an atmosphere, for exhaustless stores of fertilizers are procurable there. At this time a vast hydro-electric plant for the fixation of nitrogen is under construction in the interior of Iceland. Fertilizers made from arctic air will enrich the wheat fields in any part of the world. The same work can be carried on in all countries that have water power, and it is being carried on in many places-at Niagara Falls, in the Southern Appalachians, in Italy, and elsewhere. The specter of universal famine has no excuse to stalk abroad in these days.

There appears to be really more demand for serious thought in considering the second warning or caution given by Mr. Hill, when

he said that the people are spending too much money; cities and corporations are recklessly going in debt, and enterprises-some of which do not deserve the name-are being over-capitalized; stocks are sold and bonds issued with inadequate security, and speculation is reckless. Wall street, according to Mr. Hill's figures, sold new securities in 1912 to the amount of nearly \$7,000,000 for every business day in the year. The bankers who listened to the address were warned of rocks ahead unless the course of speculation was not speedily directed into safer channels. Overbonded business was pointed out as one of the country's greatest perils, and the speaker insisted that this condition is growing worse at such a rate that the limit of safety in many quarters has been passed. His speech was largely wanting in optimism, and was pitched somewhat in the key of the "Lamentations of Jeremiah" sounding warnings to the reckless and headstrong inhabitants of Jerusalem. Let it be hoped that Mr. Hill's predictions will not prove as true as Jeremiah's did.

Cover Picture

THE PICTURE ON THE COVER of this issue HARDWOOD RECORD shows a fine example of the installation of a Kraetzer Preparator at the plant of C. L. Willey, Chicago. This apparatus has been previously discussed in HARDWOOD RECORD.

There is a growing interest on the part of manufacturers in the use of this equipment for steaming green or partially dry lumber under pressure to insure its quick and accurate seasoning. With the increased number of installations in various parts of the country there is a growing popularity of lumber treated by this method. Users of all varieties are fast learning that they can kiln-dry Kraetzer-cured lumber product in less than one-half the time required to kiln-dry unsteamed wood. Besides that, the treatment insures uniform tone, absolute freedom from stain and seasoning defects, lighter weight and very much improved milling qualities.

The equipment here pictured is employed in handling walnut, vermillion and black walnut, but in other Kraetzer Preparators at lumber manufacturing plants in various parts of the country, red gum, tupelo, cypress, red oak, white oak, beech, birch, maple, sycamore, elm and other varieties of wood are successfully handled. The apparatus is just as efficacious in handling soft woods as it is in hardwoods.

The equipment here shown has a capacity of handling well towards 100,000 feet of lumber in ten hours. It constitutes the latest and most efficient process known for the quick and accurate seasoning of all varieties of lumber.

A Logical Method

THE LUMBER TRADE has felt that the efforts of the railroads to effect a horizontal increase of five per cent in the general freight rates of the country would work a gross injustice upon them because it appeared from reports that it would be very difficult to combat such advances. The reason for this difficulty would have been the fact that such advances as originally proposed were to have been general and without any consideration of different classes of commodities. The Interstate Commerce Commission, however, has seen the wisdom of passing upon the question of the advances on the individual commodities and has suggested that the railroads file supplements of the existing tariffs advancing specific rates as they desire, following which the commission will investigate the reasonableness of each proposed advance rather than of the general ad-

It is reported that the railroads are now filing such supplements and that numerous advances on lumber rates have already been filed. It is assumed that all lumber rates in the country are to be included. The wisdom of such a course is readily seen when it is learned that the Interstate Commerce Commission will suspend these tariffs pending hearing upon each. If the time of suspension is too short to get around to a consideration of the total number of individual tariffs a further suspension will be granted on such tariffs as have not been considered, which will be long enough to cover a period sufficient to go over the entire matter in this individual way.

It can readily be seen that the ultimate decision as handed down by the commission, will be based on a much fairer consideration of

the question than if the general advances were taken up as a sage question, and conditions in one industry forced to apply on other industries. It is a well-known fact that some industries in some sections of the country can much better stand increases in freight rates than can other industries located in other parts of the country. Shippers can feel even more secure in their position because of the fact that Attorney Louis R. Brandeis has been delegated to represent them. He will co-operate with representative shippers in preparing such arguments as they wish to present. It is suggested that because of the possibility of overlooking the matter of suspending some of the advances, shippers themselves protest to the commission asking for such suspensions on specific tariffs which will be ordered immediately without protest. This of course is merely a formality.

Thus the shipping contingent of the country, including the big interests in the lumber business, will be assured of a fair and impartial trial of the question of the advancement of freight rates.

Of Paramount Importance to the Lumberman W FILE THE NATIONAL CONSERVATION CONGRESS orig :nally started with the purpose of conserving the timber resources of the country, it has spread to such proportions that the average lumberman considers it to be of rather too wide a scope to be of direct importance to him. The congress as it now exists embraces the conservation of many resources other than the actual timber of the country, but the conservation of the timber has been considered of such paramount importance that a special forestry committee has been maintained and special thought is given at each congress to work out the problems directly affecting the future supply of timber and other conditions that have an intimate connection with the forests of the country.

It is announced that in order to give ample time for the presentation and discussion of sub-committee reports, the forestry committee of the fifth National Conservation Congress will start its sessions at the New Willard hotel, Washington, D. C., on November 17, a day ahead of the opening of the congress itself. The forestry committee meetings will be working forums to add to the findings of the ten sub-committees and results of work along these lines should be interesting to every lumberman and forester because they have a direct bearing on their industry or profession.

Considerable interest is being manifested by lumber manufacturing associations in the conservation congress, and in fact several of them have at recent conventions delegated individuals who will be sure to attend the various sessions of the congress at Washington.

The purpose of arranging for the advance meeting of the forestry interests is two-fold. In the first place by so doing the various questions pertaining to the conservation of the forests, the creation of perpetual timber supply, and the complete development of water power will have a discussion conforming to the importance of those questions. On the other hand, by completing such discussion before the regular sessions, lumbermen and foresters will not be compelled to miss other sessions of the congress.

With this interest in their welfare shown by those in charge of the National Conservation Congress in evidence, lumbermen should consider that the workings of that highly important organization should be of sufficient interest and value to them to warrant at least giving it their moral support.

Another Indication of Efficient Work

THE FACT HAS BEEN DEPLORED on the part of the lumber trade that the Census Bureau, because of lack of sufficient funds, will not continue the compilation of lumber statistics. The loss of such statistics while probably not effecting any direct hardship on the lumber trade, would be a distinct loss to that branch of the business body of the country.

The National Lumber Manufacturers' Association has accomplished a great many important things in the past, of direct value to the trade that it represents. It now comes to the front and announces that it has arranged with the Bureau of Statistics of the Department of Agriculture to continue the work of gathering statistics with such co-operation as the associations affiliated with the National Lumber Manufacturers' Association can give.

According to the plan the gathering of statist a not be even more complete than it has been in the past as reports will be asked from all sawnulls in the country doing a commercial bisness, but not to include as many of the unimportant mills as were covered by the census' report. It is hoped that by close competation the

Securing the Architects' Support

N ANOTHER PAGE IN THIS ISSUE of HARDWOOD RECORD is published an account of a banquet that was given at St. Louis a few days ago by the Lumbermen's Club of St. Louis, at which there were in attendance by special invitation seventy leading architects. The idea was conceived by a prominent lumberman of St. Louis that by getting in direct personal touch with the architects and endeavoring to show them the real condition of affairs as applied to wood and the various substitutes of wood, a change of sentiment could be effected which would react to the lasting benefit of the lumber business. The sentiment as expressed by the architects both during and after the gathering was ample proof that the meeting was not only thoroughly justified but was also a complete success. The value of this gathering, however, does not lie so much in the mere fact that it occurred but rather in the fact that it offers a highly valuable suggestion to the numerous other organizations representing the lumber trade in various committees throughout the country. It is true that the meeting was directly in the interests of yellow pine but it is equally true that the same beneficial effects could be had by inaugurating a similar idea in the interests of various other domestic woods.

It is unquestionably a fact that to win the co-operation of the architects of the country would mean creating a much more comprehensive idea of the value and proper uses for forest products. It might prove entirely feasible to expend a portion of the money now available for general advertising purposes for just this kind of propagandist work, which would insure getting directly in touch with the architects themselves and placing before them just the kind of information which the trade is endeavoring to put into their hands through other means. Unquestionably, also, such a method would make a more profound impression upon the architect than would the issuance of the same information in a more indirect way. It is certainly an idea worth trying out more fully.

A Promising Congressional Visit

LARGE COMMITTEE of Congress, to some extent selfappointed, will soon visit the southern Appalachian region to study the question of buying land to establish forest reserves. Such lands have been bought on a small scale under the terms of the Weeks law; but the funds for making the purchases have been somewhat grudgingly furnished by Congress, and many senators and congressmen have been lukewarm in their support of the whole proposition. A visit of two or three dozen national lawmakers to the region where the land purchases have been made will unquestionably result in good. Many congressmen are only slightly acquainted with the southern mountain ranges and cannot fully appreciate the questions involved in the purchase of forest lands in that quarter. Their growing interest in the subject is evident from their purpose of paying an extended visit to the region where they can study the problems at first hand,

Under the strict interpretation of the Constitution, forest lands could not be bought for the purpose of conserving the timber supply; but such lands may be acquired to protect or improve navigable streams. It is on that ground that the purchases are made. Everybody knows that the protection of growing timber, and the securing of future supplies, are important results which will follow the practice of forestry methods on the high southern mountains; but if that were the only result expected the lands could not be bought with money appropriated by Congress.

The protection of the lower courses of the navigable rivers will follow the improvement of forest conditions near the sources of the streams. A good soil cover stores water in time of storms, and pays it out slowly afterwards, causing a steady flow lower down. Good cover likewise chicks excessive washing of soil and sand into the streams, and the consequent formation of bars to interfere with navigation. These natters have been so widely discussed through the press and in speeches and lectures that they are now very gener ally understood.

Purchases II is far made in New England and the South under the Weeks law include very small areas in comparison with the whole region that ought to have protection against excessive cutting of timber and destructive burning. Fortunately, many holders of timberland are giving their property protection. They lumber intelligently and guard as well as they can against fires. This is a valuable assistance to the government in what it is doing. Many lumbermen, on the other hand, care nothing for the land and are interested only in skinning it to the last sapling, and then leaving it a prey to fire and storm. It is land of this class that is being purchased under the Weeks law. Forests will be restored where possible, and in years to come these tracts will bear merchantable timber; but if they are left to the mercies of fire and storm, after the lumberman has done his worst, the future will find them barren rocks or gullied gravel piles.

Many interesting things will come to the attention of the congressional visitors when they make personal examination of the wild lands among the mountains.

Some Startling Figures

T HAS BEEN ANNOUNCED by the proper authority that the manufacture of freight cars during the year 1913 will be far below the manufacture of such cars during 1912. It has been argued by the railroads that they needed funds to be derived from the proposed increases in freight rates, and it also has been argued on the other hand by shippers that such demand for increases were arbitrary and uncalled for. The facts, however, regarding freight car construction would indicate there is some truth in the assertions of the railroads.

According to report, the number of freight cars manufactured during 1913 will not aggregate over 100,000 as against 235,000 during 1912. According to the same report, up to September 30, 1913, there were but 88,000 freight cars finished, and the indications are that there will not be any great renewal of activity in freight car manufacture during the remainder of the calendar year.

Of course, with the decreasing use of wood in freight car construction this condition does not have the important bearing on the lumber business that it would have had formerly. Nevertheless it offers a significant situation as far as general conditions are concerned

Slowly Winning the Fight

POREST FIRES are not to be feared in any part of the East during the remainder of this season, and there is little danger in the West. The autumn rains have wet the woods, and the winter snows will soon fall. The season's record is ready to close, and the showing is excellent. Fire fighting in the woods is coming to be as well organized as the same business in cities. Progress has been rapid during the past few years. The first thing learned is prevention. That is really the most important part, though it is less spectacular than the fight against the flames when they have once gained headway.

The battle is a good deal more than half won by simply being ready for it. From one end of the country to the other missionary work has been going on. That portion of the public which uses the forests for business or pleasure has been instructed how to lessen danger. Camp fires are not to be carelessly left burning; live matches and cigar stumps must not be thrown aside where there is possibility of starting a fire; farmers who clear land or burn trash are cautioned that care must never be relaxed in the handling of necessary fires; locomotives operating in the woods must have spark arresters; and all other known dangers are pointed out. These are the precautions taken in advance.

The second stage in readiness is to have a trained force of fire fighters, and a system of attack and defense. In spite of all precautions, fires will start, and they must then be controlled and extinguished. Remarkable results have been achieved along that line. No great fire got far beyond control the past season, though bad conflagrations of short duration occurred in California.

Success is not due to chance. Some seasons are drier than others, and fires will then be more difficult to control; but all summers and autumns are dry enough to make fires formidable if effective measures are not taken in advance to prevent and control them.

Every forested region in the United States is now organized or is organizing to handle the fire hazard. Less is being done in the South than in the North and West; but even in the South a great deal is being done to lessen injury by fire. The advocates of better protection there are slowly overcoming the erroneous belief prevalent in that region that slow fires in a flat country do no damage.

When the figures representing losses during the season of 1913 have been collected it is believed that the showing for the whole country will demonstrate the great value of organized effort at fire fighting, backed by public sentiment.

A New Thought Applied

THE DISCUSSION OF THE "CONFLICT" between capital and labor has been so conspicuous in recent years that the general public has been led to believe that the world was in imminent danger almost of a physical encounter between the so-called working classes and the other factors of modern society. There is no question but that the relations between that branch of society which produces by physical effort on the one hand, and the branch which produces by mental effort on the other hand, constitutes one of the greatest problems which this and other countries have to face now and will continue to face for years to come.

Nevertheless considerable encouragement is seen as the years go by in the promulgation and application of advanced ideas looking toward a natural and equitable settlement of industrial questions and a satisfactory adjustment of the relations between capital and

One of the most important of these steps is seen in the creation of the Commission on Industrial Relations which was authorized by act of Congress in 1912. The creation of the commission did not cause the comment that it justly deserved at the time, probably because it was considered, like so many other accomplishments of our National body, to be but an accomplishment on paper. However, recent developments indicate that this commission is actually constituted on a basis which will ultimately effect a much more comprehensive knowledge of the conditions as affecting relations between the two great bodies of the industrial world, namely the employers and the employes in the industries.

The first meeting of the commission was held at Washington, D. C., last week and preliminary arrangements were perfected for the active inauguration of investigations which will start the first of the year. The matter is brought more closely to the lumber trade because of the announcements that the fourth branch of the work will include lumbering. This will be in charge of B. M. Manley. formerly of the department of labor. Mr. Manley's work will be the investigation of unskilled labor, floating labor in lumber camps, and will also include the activities of the Industrial Workers of the

That the work of the commission is designed to actually accomplish something is seen by the fact that it already has at its disposal \$100,000 to begin on, and the probability of securing \$400,000 in addition. According to the specifications of the law a preliminary report will be issued within one year after the investigation is begun, and a complete report will be published within two years from the beginning of the work.

The commission as appointed by President Wilson represents three classes, namely, the public, the employers and the employes. On the commission are seen the names of individuals prominent in work pertaining to the industrial welfare of the country. Its purpose should unquestionably result in many suggestions and changes of great benefit.

Utilization at German Sawmills

To an American interested in a more complete utilization of the raw products of our forests, a study of utilization at German saynulls is most interesting. It is said that in Germany from ningty tone to ninety six per cent of the whole on the averfree nore is utilized. even stumps being grubbed out and used for fuel and tar along with the faggots from the smallest branches, whereas it has been estimated by the United States Forest Service that we use only about forty per cent of the average tree that is felled in the woods.

Of course, the

A CUSTING AREA IN GERMANY NOTE THE COMPLETE UTILIZATION OF ALL AVAILABLE
MATERIAL, AND THE COMPARATIVELY SMALL SIZE OF THE TIMBER BEING CUT

obvious explanation of this discrepancy between American and German utilization is the difference in market conditions—wood is so scarce and consequently prices are so comparatively high in Germany that practically speaking, nothing goes to waste and no wood is too far distant from market to find an attractive price. Aside from this explanation, the Germans must be given credit for studying their market more carefully and using machines and methods that Americans will come to use sooner or later. Although observations of their closer utilization may be largely suggestive in their present application to American conditions, yet, America is passing through very much the same economic environment that the older nations of Europe passed through two or three hundred years ago and it can take advantage of and profit by many of their close practices which its con-

ditions will soon make possible.

It has often been an open question in this country as to whether the ultimate mill will be a large or a small one and which will secure the better and more complete utilization. In Germany, the small mill is the rule and there is no evidence that it will increase in size. The mills would correspond roughly to our mills having a capacity of from 30,000 to 60,000 board feet per day and the great majority would have the smaller capacity or less. For example, the largest mill in Bavaria and probably one of the largest in Germany

cuts about 16,000,000 feet a year, which means a daily capacity of about 64,000 board feet when running two hundred and fifty days a year.

Practically every house and building in Germany is largely constructed of stone, brick, or concrete, so that construction and building timbers are not much in demand. The majority of the product therefore goes into interior trim, sash and door stock, flooring, box boards, furniture, cooperage, fencing, railway sleepers, and a great variety of minor lines of utilization. For the majority of these uses, therefore, they demand well sawn stock. Consequently the gang saw is the rule, with a very narrow kerf and the minimum amount of wood going into sawdust.

Wood is very expensive and labor cheap in Germany so that Ger-

IN MOST YARDS LUMBER FROM SELECT LOGS IS PILED SEPARATELY AND BOARDS KEPT TOGETHER JUST AS THEY

CAME FROM THE LOGS. IN THIS WAY FANCY
GRAINS CAN EASILY BE MATCHED.

ELECTRIC CUT-OFF SAW FOR CUTTING TREE LENGTHS INTO DE-SHRED SIZE AT THE MILL. THE SAW WORKS BACK AND FORTH ON A TROLLEY AND SAVES UNNECESSARY WASTE IN TRIMMING.

LOG ROLLWAY AT A LARGE PAVARIAN SAWMILL. NOTE HOW ROUND AND SYMMETRICAL THE LOGS ARE.

man machines are built to save lumber and power, whereas American machines are built to save labor. Our machines are built to turn out enormous quantities of product at our sawmills; on the other hand German machines turn out quality of product. German machines are frequently constructed and fitted to serve a variety of purposes whereas American machinery is intended to turn out one product and to do that quickly. German machinery in turn ordinarily lasts for a long time whereas ours is not expected to last more than from fifteen to twenty years or so.

It is gratifying, however, to see the amount of American machinery in use in Europe. At the above mentioned Bavarian mill, several of the pieces were of American make. In fact the only band saw-mill in the whole Black Forest region, and one of the very few in Germany, was fitted with machinery made by an American manufacturer. Another interesting fact in connection with these small sawmills is the great variety of products that are usually turned out. Many of these are by-products of the main output and would frequently be sent to the "hog" or burner in this country.

Contrasted to American conditions, small logs are the rule. This is explained by the fact that under any system of scientific forest management, it does not pay to wait until trees become of large size before they should be cut. The "financial rotation," as it is called, permits of the growth of trees just large enough to be utilized for saw-logs and not left long enough in the woods for the compound interest charges to nullify the dividends. This means therefore rather knotty and low-grade lumber.

Long timbers or tree lengths are also the rule. On many operations twenty-three feet (seven meters) is the minimum log length. The advantages explained in connection with this procedure are that the logging and transportation to the mill are more economical, the long logs can be better sawed to the desired length at the mill, and there is no loss in trimming. Loggers in this country commonly allow from three to six inches for abrasion in transportation and trim at the mill. In many of the German mills, logs are cut to the even desired length and there is no trimming done at all. Long lengths are also barked before shipment. It is said that bark constitutes an average of ten per cent of the total material in a log. In the case of Norway spruce, beech, and oak, the bark is used for tanning purposes. The bark of other trees is used for fuel.

Another important phase of utilization at German sawmills is the universal practice of sawing closer than is the custom in this country. That is, only an eighth or a sixteenth of an inch is allowed for dressing, and stock intended for a variety of uses is never allowed to be sawed one inch in thickness, when three-quarters or five-eighths will suffice. Of course different standards of measurement are used in Germany (metric system) but this is offered as exemplary of the manner in which they study their market and then saw accordingly.

As mentioned before, there are hardly ever any trimmings which in this country go to the "hog" or are sent to the burner. Edgings

THE METHOD OF PILING IN GERMANY IS PRACTICALLY THE SAME AS THAT IN USE IN THIS COUNTRY.

are used for handles of all kinds, chair rounds, novelty and toy stock, etc., and are seldom used for fuel. The wooden top industry is very important in Germany and toys are exported to America as well as to every European country. The center of this industry is in Nuremburg in northern Bayaria. Slabs are utilized largely for boxboards, vencer cores, short stock, fuel, novelties, etc. Sawdust is sold for fuel and is utilized for making paper and wood alcohol and for general packing purposes. In covering practically every producing region of Germany, the writer failed to see a refuse burner and it is doubtful if there is one in the whole country. Practically all of their ties are sawed, which saves the enormous waste prevalent with our bewn ties. The German railway specifications are also very economical in that in cross section, ties need not be rectangular as is the case with American ties. The upper side can be as narrow as five or six inches as long as the base or lower face is at least ten inches in width. By this means, many logs are made to yield two ties instead of one, as with our railroads.

A very interesting feature of their sawmills is that hydro-electric or even steam power supplied with coal is utilized in many cases instead of using sawdust and refuse for fuel. Scarcely a single horse-power in the form of falling water in the mountains is allowed to go to waste with the consequent result that a great economy is introduced. It is said that the first sawmill in Germany was run by direct water power as early as 1322.

In grading, rules formulated and adopted by lumber associations similar to those in this country are prevalent. They are based on dimensions and defects in the same manner as with our own lumber associations. All lumber cut from certain butt logs is piled together for special uses such as matched veneers, furniture stock, and fancy panel stock. In almost every lumber yard it is a common sight to see these boards from the select logs piled one on top of the other just as they occurred in the log. The result is much better prices. Most of the oak from the famous Spessart region is piled in this way, and for fancy veneers and cabinet work, especially fine large trees are said to bring from \$500 to \$1,000 on the stump.

In Germany wood is sold by the cubic unit rather than by the board foot and it is probable that in the future Americans will adopt the same method. One is somewhat surprised at the amount of lumber seasoned wholly in the open or under sheds. Although considerable is kiln-dried, not as much is put through this process as one would naturally expect.

Since Germany's forests produce only four principal species, American and other foreign woods are largely used.

At several of the mills visited, many intensive lines of utilization were developed. For instance, at one mill, besides the usual lumber and box board product, there were special machines for turning out broom handles, wooden shoes, implement stock, cooperage, furniture stock, ties, and excelsior, and in addition there was a Boucherie timber treating plant to prolong the life of telephone and telegraph poles.

N. C. B.

The Lumbermen's Round Table

KILLING THE GOOSE AGAIN?

The remarks quoted herewith may be regarded as prejudiced, because they come from a buyer of walnut. Nevertheless, they are perhaps worth repeating.

"Lumbermen are exceedingly poor business men," said this authority. "They don't know when they are well off. They have killed many a good thing by trying to squeeze an abnormal profit out of it and by rushing the price up so fast that buyers were simply driven in desperation to the use of some other wood. Take the case of poplar—a tragedy, you might almost call it. Had the people chiefly interested in the production of poplar taken pains to keep the price down to the proper figure, they would not now be struggling to find an outlet for this splendid wood.

"The walnut situation is the same way. The lumbermen are so determined to get what seem to me to be excessive prices for their logs and lumber that they have caused buyers both here and abroad almost to withdraw from the market. The result, of course, has been a reduced demand, a lowering of the price and a glutted market.

"Some day, perhaps, the lumbermen will realize that it is to their interest to keep prices steady, not too low nor yet too high; the happy medium combining encouraging the demand and securing a legitimate profit,"

HELPING TO PAY THE PIPER

"I am glad to see that there is an excellent prospect of the producers of red gum forming an association which will have charge of the advertising of that commodity, as well as handle other matters of general interest," said a well-known member of the trade recently. "The cypress manufacturers' association has done great work along this line, largely because it has included practically every manufacturer of any consequence. This has resulted in the cost of exploiting the wood being shared by everybody interested and in a position to profit. Red gum, on the other hand, has been advertised by a comparatively small number of manufacturers; and without debating the merits of general advertising for lumber, it must be conceded that it was a little too much to ask these concerns to foot the bills, whereas everybody in the business was able to profit by the results. The association will at least enable the cost of maintaining such a campaign to be properly distributed."

THE COST OF SELLING LUMBER

Do you realize that it costs almost as much to sell hardwood lumber through traveling salesmen as it does to saw the lumber in the first place?

This may sound like an extravangant statement; yet the books of a well-known concern, which operates mills as well as wholesale yards, and has a big corps of salesmen, most of whom are considered top-notchers, show that this is pretty nearly the case.

It costs the company \$1.70 a thousand to sell lumber through several of its men. Some of them sell for less, of course, and the average is below the figure quoted. It costs but \$1.90 a thousand to saw the stock, this including the actual expense of manufacturing, exclusive of loading into the mill, yarding, etc.

The figures are not mentioned to give the idea that selling expenses are excessive; but simply to impress upon the lumberman the fact that since it costs so much money to dispose of lumber, that feature of his business ought to have as much attention as any other, including the actual manufacture of the stock. But few see anything except the sawmill end of the business.

QUARTERING RED OAK

Lumbermen who take the trouble to analyze the difference in values between quartered red and quartered white oak and between plain red and plain white oak sometimes wonder how any quartered red oak manages to get on the market at all. It is of course true that most red oak is sawed plain; but some mills

have managed to pile up a fair amount of quartered stock without actually going to the expense of manufacturing it in that way. The apparent anomaly is explained by the fact that they cut the log straight through, without turning, the result being that the center boards are quartered, as far as figure is concerned, though the conventional method of quartering was disregarded. With the expense of manufacturing reduced by this method, making quartered red oak may become profitable, after all, though, obviously, comparatively little is piled up except at a mill with a very large production.

BY-PRODUCTS OF HARDWOODS

A concern has been formed at Jackson, Ky., for the purpose of manufacturing wood alcohol, acetate of lime, charcoal and tar products from beech and hard maple. The business will be conducted under the name of the Kentucky Wood Products Company, Kennard Ragon, manager. An investment of \$35,000 is being made in a sawmill to cut up cord-wood for the ovens, as well as lumber from the better class of timber acquired; in the ovens themselves, which are two in number and fifty-two feet long, and in the other equipment needed.

This is the only concern of the kind in Kentucky and other sections of the central southern hardwood belt, and the business-like way in which the concern is planning its work indicates that the project has been carefully thought out and has been found to be practicable. The company, by the way, will use some mill refuse in its operations, showing that there is opportunity to manufacture valuable by-products from certain hardwoods, at least. It would be of great benefit to the trade to have commercial chemists put to work on the proposition to determine whether it would not be practicable to operate by-products at hardwood mills, as is being done in connection with yellow pine and other softwoods.

ONE ADVANTAGE OF THE RIVER

A hardwood man was complaining to one of his friends in the business of the big demurrage bills he was having to pay on cars of logs which remained on his track for an unusually long period because of the crowded condition of his yard and the impossibility of unloading promptly.

"This car service proposition is getting to be a pretty big item," he said. "It is running between \$150 and \$200 a month,

and I would like mighty well to get rid of it."

"For the first time," said the other manufacturer, slapping his thigh, "I feel that operating a river mill has compensations. I had never thought of it before, but I certainly have an advantage at that point, because I can let my rafts or barges lie in the river as long as I please, and not pay a cursed cent for the privilege."

Perhaps this is the silver lining of the river mill cloud.

COMMON SENSE BADLY NEEDED

In these days of scientific management one could easily believe that everything had been done that common, ordinary horsesense could dictate; otherwise, why drag in the professors with their higher mathematics and scientific formulae?

But a little observation here and there shows that the trade as a whole stands more in need of the application of practical, sensible methods that everybody knows all about than of sensa-

tional stunts which have the advantage of novelty.

This thought was impressed recently by seeing a big lot of beech lumber lying beside a railroad station in a southern state. The owner of the lumber had purchased a big lot of logs several months before, paying a high price in competition with other concerns. Then, applying a little scientific management, and thinking to save freight and handling charges, he had installed a portable mill on the timber tract and had cut up the logs as the trees were felled. The lumber was hauled to the station to be loaded into cars, and as it was expected to ship it

green, the stock was bulked down instead of being put on sticks,

It has been there now for four or five months. Apparently the owner of the lumber has been so busy studying out scientific methods for use elsewhere that he has forgotten all about the stock piled up down in the country. It has checked and split and done about everything else imaginable, and some of the

boards are ever stor, together with the sap while hers no on

Perhaps scientific management should not be blamed for this sort of criminal waste. But certainly a little common sense and a little less effort to do the unusual would have helped mightily here.

Philippine Timber News

The Bureau of Forestry in the Philippine Islands issues a quarterly news letter to acquaint the public with what is being done. Major George P. Ahern is director and W. F. Sherfesee, assistant. The commercial relations between the United States and the islands become closer from year to year. The export of Philippine lumber to this country is not yet large, but it is increasing, and steps have been taken to put the business on a satisfactory basis.

In consultation with representatives of the various lumber companies and with the principal wood-using bureaus of the government, a tentative set of grading rules has been drawn up. These rules will be used provisionally by the Bureau of Supply to try how far they can be applied. The adoption of a set of rules for the grading of Philippine lumber will mark a long step in advance. Their need has been felt for many years, but it is only now that co-operation between the principal parties concerned has made it possible to formulate them.

During the fiscal year which closed on June 30, 1913, the forest revenues exceeded the expenses of the Bureau of Forestry by \$82,000.

An increasing number of visitors from the United States and Europe are looking into the possibility of securing large and regular shipments of Philippine lumber, particularly for special purposes for which the available supply of woods formerly used has become exhausted or seriously depleted. The use of Philippine woods for veneers has attracted special attention and a trial shipment of several species has been made to Europe for veneer purposes. Other shipments have been arranged for and will soon be made. Small shipments have also been made by private firms to the United States for built-up panels stock and for wagon and wheel material.

Ranger Luis J. Reves has recently completed a report on the musical instrument industry in Manila. All of the shops were visited and answers to a complete series of questions have been compiled giving full data on the kinds of wood used for instruments, the sources from which the material comes and the special fitness of certain species for given parts of instruments. Incidentally Mr. Reves has been of assistance to Mr. Fischer in obtaining the co-operation of a prominent instrument maker in installing a comprehensive exhibit at the coming Philippine Exposition. This is only the first of a series of such studies to be taken up by Mr. Reves. He is now engaged in investigating the sculptors', picture-frame makers' and carvers' shops. He has also compiled tables showing the provinces from which all of the more important commercial woods of the Philippines have been reported, together with their dates of flowering and fruiting. This will be used in connection with maps of the archipelago showing the distribution of the various species.

On September 24 the director of forestry sent out advertisements for a proposed twenty-year exclusive license agreement (or concession as it is popularly called) for a forest tract on the south shores of Pañgil Bay, Lanao District, Moro Province. The tract embraces approximately 100,000 acres mostly of virgin timber. The more prominent species on the tract are yacal, guijo, white, red and other lauans, apitong, tanguile and lumbayao. The area is unusually rich in desirable species and presents an excellent opportunity for a prospective lumberman who has an export trade in view.

Bids will be opened in the office of the director of forestry in Manila at noon on December 10. Among the minimum requirements are an output during the first two years of approximately 2,000,000 cu. feet of timber; not less than 1,320,000 cu. feet per year during the third and fourth years; and not less than 2,600,000 cu. feet during the fifth and each subsequent year. A minimum capital of \$50,000 United States currency must be immediately available for the prosecution of the work. Such information concerning this tract as has been acquired by the Bureau of Forestry can be seemed either upon application at the offices of the Bureau of Forestry in Manila or at the Bureau of Insular Affains, Washington, D. C.

F. P. Williamson, vice-president of the Port Banga Lumber Company at Zamboanga, reports that his company has recently installed a small Fay & Egan sticker, 6x24. It has turned out some beautiful flooring which is very popular locally. There is also in transit an "American" edger which will be put in place at once.

G. E. Carpenter has returned from the United States on a short visit but almost immediately left once more for America in connection with a million-foot order which the company is confident of securing.

The North German Lloyd Steamship Company loaded cargo at Port Banga on August 27. The lumber is billed to London on a through bill of lading being transhipped at Singapore. This trade is growing steadily as a result of constant efforts. Mr. Williamson also reports that other lumber companies of Mindanao are also shipping to London, which is very gratifying and holds out promises of a bright export trade for the future.

The Insular Lumber Company is now sawing about 60,000 board feet per working day. An eleven by fourteen inch compound geared yarder from the Washington Iron Works has been received and is set up in the woods. Six new Seattle steel logging cars have also been added to the company's equipment. The new export drying shed is under way. They are about two miles of track ahead in the woods. A five year contract has recently been signed by which a firm in the United States agrees to take all export stock manufactured by the company.

Several visitors from Europe and the States have recently complained of the poor quality of manufacture found in some of the lumber from the Philippines. It is very important that all export stock should be well manufactured, because one shipment of poor material will hurt not only the individual shipper but the entire export trade. It is much easier to gain a bad name than to live it down.

Forest Taxation

The tax laws in most states do not recognize forests as a crop to be perpetuated, but act to destroy the timber resources for the enrichment of the present to the poverty of the future. Trees are the longest-lived crop that grows, yet the easiest to kill by unreasonable taxation. Annual crops catch the tax once, and are then turned into money; but the growing forest crop is hit yearly for half a century before it makes any return to its owner. Two states, Pennsylvania and Louisiana, have this year enacted forest taxation laws based on correct principles, and other states are agitating similar legislation.

The Exports of Red Gum

Latest statistics show that red gum is exported to twenty one countries direct from the United States, and from those foreign centers the wood is distributed to probably as many other countries. Records of final destination are not kept by customs officials, and from the nature of the case it would be next to impossible to do so. However, a study of consular trade reports, coming from all parts of the world, shows that the wood is making its appearance in many places not named on export lists.

Several names for the wood are in use, and unless one is familiar with these, he might not recognize red gum when it is mentioned. Satin walnut is a common term for it in England, France and Italy. There is no commercial wood in the world properly called by that name; consequently red gum is not so designated in order to palm it off as something else. The name appears to have been bestowed simply for convenience of trade. The wood's resemblance to Circassian walnut doubtless suggested part of the term, and its soft shades and delicate appearance were responsible for the term satin.

In England the names hazel, hazelwood and hazel pine are heard. These names nearly always mean red gum, though sometimes other woods are given the same names. They are based on red gum's botanical relationship with hazel. It is as close akin to the common witch hazel of this country as one cousin to another.

Records of exports group as one all woods commonly called gum, though some of them are only distantly related botanically. Among these are black gum (Nyssa sylvatica), water gum (Nyssa biflora), sour tupelo (Nyssa ogeche) and the common tupelo (Nyssa aquatica). These ought not be confused with red gum, for they belong to a different family of trees—the dogwood family—and the wood need never be mistaken for red gum. This explanation is made because in export statistics all gums go in together, though on the other side of the sea there is little likelihood that any purchaser will accept any lumber of the Nyssa group as the genuine red gum. The fact is, most of the exports are red gum.

Lumbermen are well aware that two grades or kinds are known in trade, "sap gum" and "red gum." That distinction applies to the lumber only, not to the standing tree. The tree is always red gum, but when converted into lumber the light-colored sapwood is "sap gum" and the darker heartwood is "red gum." Some trees are largely sapwood, others are principally heart.

The first important exports of red gum were as paving blocks. They went to London. They were extensively advertised as having been seasoned by a special process. The seasoning had been accomplished by girdling the trees and leaving them standing for a year or two. The paving blocks had a good run for a time, but Australian woods finally drove them out of the London market and probably not one could be found in that city now.

The most important demand for red gum in Europe comes from manufacturers of furniture in Belgium, Germany, France, Italy and England. Americans generally have not yet come up with the Europeans in manufacturing the highest classes of red gum furniture. Across the sea it has largely taken the place of Circassian walnut—which is, botanically, the same tree that produces the English, French and Italian walnut wood of commerce. It is generally understood that a good deal of the so-called Circassian furniture that reaches this country from Europe is red gum, and that much of the homemade product falls in the same class. It is unfortunate that a wood as beautiful and valuable as red gum must go disguised in order to reach the most profitable markets.

The accompanying table gives the exports of red gum for 1912. Figures of former years for comparison cannot be conveniently given, because until recently gum was not separated from other species in trade statistics with foreign countries. It is believed that exports are increasing, and value is increasing also. Well-informed men have expressed the opinion that before many years red gum will be as valuable as white oak. Seasoning troubles, which once caused much prejudice against this wood, are rapidly disappearing in this country,

and they seem to have ceased wholly in Europe. Shipments which leave American shores are largely in the form of sawed boards:

EXPORTS OF RED GU	M. LUMBUR,	1912
Destination	$I \in \mathcal{C}I$, $B \in \mathcal{U}$.	Lalue
Austria Hungary	91,000	8 2,593
Belgium	7,139,000	196,196
Denmark	158,000	4.208

RECVETTUL	2011/	
Europ	52,722,600	81.466,669
North America	6,008,000	155,580
South America	83,000	5,356
Africa	602,000	17,426
Total	59,415,000	\$1,645,031

The cut of the red gum lumber in the United States, according to the latest available figures, is 582,967,000 feet yearly, and its total value at the mill is given at \$7,059,730, or an average of \$12.11 per thousand feet.

The exports foot up 59,415,000 feet, or a little more than ten per cent of the total cut. The invoice value of exports is \$1.645,031, or over twenty-three per cent of the total value in the mill yard of all the lumber produced. It appears, therefore, that the export lumber is worth more than twice as much per thousand as the average of the whole output. This is to be expected, because much of the better grades is exported and the lower grades remain at home.

The foreign market for red gum is a wide field for study, and there can be no question that it can be made a profitable field. The wood is finding its way into new regions in spite of difficulties that arise from the vicissitudes of trade. There are a good many things to which exporters might well give careful attention. This can be no more clearly illustrated than by quoting from a recent report by United States Consul W. S. Hollis, at Beirut, Syria. That is not a very important place, as far as American lumber is concerned, but conditions there may be supposed to resemble conditions in a good many other places where markets for American lumber are beginning to open. For that reason, what the consul says is worth more than passing notice:

The principal American wood imported into this city is red gum wood. There are no brokers in Beirut that represent American lumber exporters, and only one firm buys direct from that country; two others buy indirectly. As there is no direct steamship service to the United States, American lumber is usually shipped to Hamburg, where it is transshipped. The one firm importing directly from the United States complains that delay in executing its orders has seriously hambered its business.

American red gum lumber has been used to a considerable extent during the past few years by the Beirut furniture manufacturers, who, however, have purchased most of their supplies of this particular quality of wood from sundry importers thereof located in Alexandria, Egypt.

Two years ago a Beirut wholesale importing house succeeded, after spending a lot of time in correspondence, in coming to an understanding with an American lumber exporting house, and thereafter imported a considerable quantity of this lumber, which was shipped from Memphls, Tenn., to Beirut, via New York and Hamburg. The terms arranged and agreed upon were payment of seller's draft with shipping documents attached upon the arrival of the goods. The first order filled under this arrangement was a shipment of red gum wood, valued at \$800, all of which was intended for consumption in sundry furniture manufacturing shops in Beirut.

It took this first shipment five months to reach its destination, while

the last shipment, valued at \$1,800, which was ordered last January, has not yet arrived here. Much of this delay in shipment occurs through the lumber being, transshipped at Hamburg, and the Beirut importer feds that if the Memphis shipper had an energetic forwarding agent in New York, or in New Orleans, who would take the trouble to have the bunder shipped direct to some Mediteramean port, such as Naphes, Geong, or Tris see, for transshipment, it would arrive here much quicker. The trade with Syria in red gum and in other cabinet woods is one which is capable of considerable expansion, as almost all wooden furniture used here is made locally, where cabinetmakers receive, on an average, but eighty-one and one-half cents per day. Moreover, the climate here, together with the rough handling that furniture receives whenever it is moved, makes the life of an ordinary piece of wooden furniture comparatively brief; and this helps to keep up the demand for new furniture.

The American hard and semi-hard woods are already quite popular with Belrut cabinetimakers, and if they could be assured of prompt deliveries and of reasonable prieses, they would no doubt use these woods much more largely than they do at present. The firm is anxious to do more business in American cabinet and furniture woods, and would be glad to receive quotations, prices, and samples from reputable American shippers. The firm is a member of the American Syrian Chamber of Commerce, and can handle correspondence in English. Prospective shippers to Syria can get a great deal of valuable informatic a relative to credits, banking arrange-

ments, drifts, etc., by applying to a New York firm whose address and that of the Berent important house referred to are obtainable from the Bureau of Fourieri and Domestic Commerce, Washington, D. C.

The red gain limber expects to toreign countries described the whole of this wood that leaves the shows of the Levied States. Box shooks and slack cooperage stock draw heavily upon red gum, but precise figures cannot be quited because statistics are not kept in a way to show various woods separately.

The trade in ted gum lumber with South America is very small. The whole continent in the course of a year does not bay as much as one steam tug will carry. Africa takes seven times as much as South America. Oceania bays none. That is a hard market to reach under existing conditions. So is Asia. With the opening of the Panama canal an enormous field will be open to the shappers of this wood. The market will include the whole west coast of the two Americas from tape Horn as far north as anyone may want to go. On the other side of the sea it will embrace China and the other countries of eastern Asia; Australia and the numerous islands of the Pacific ocean.

The Lacrosse-Stick Industry

The little town of Cornwall, on the bank of the St. Lawrence river in northeastern Ontario, sends \$2,000 a year into the United States to buy the choicest hickory that can be found between Arkansas and New England; and when the hickory arrives it is carefully stored until the stormy weather of winter sets in. About that time a small troup of Indians, from eight to a dozen, arrive at Cornwall from the back country where they spent the summer in idleness. The hickory billets are turned over to them, and they begin their winter work of whittling lacrosse sticks. By the time the warm days of spring call the children of the wilderness back to the wild, they have reduced the hickory to the finished product, and they depart for the frontiers, leaving others to put the sticks on the market and collect the cash from the sales.

That is said to be the only lacrosse-stick factory in the world, and the work is done wholly by Indians. The product is sold in the United States, England, New Zealand, Australia, but mostly in Canada. Doubtless white men could master the art of making the sticks if they would set about it, and perhaps other than Indians have made a few sticks at times; but the industry has always been in the hands of Indians. They claim to possess the secret of giving the proper and peculiar curve to the stick, and weaving the lattice or net of thongs just right. They have handed the secret down from generation to generation, until today the last spot on earth where the sticks are made is at Cornwall.

It is claimed that the game originated in that place. That is claiming more than can be proved. It may have originated there, for all anybody knows to the contrary; but if it did, it had spread far and wide a long time ago. It originated among the Indians, but no man knows when. The name now applied to it is French, but that is not the original name. Probably there were as many original names as there were Indian tribes who played the game. One of the names in use 150 years ago was "baggatiway."

At the present time the game is played in accordance with strict rules, and in a scientific manner. The sticks are four or five feet long, curved at the end, with a net of leather thongs or catgut, forming a loose pocket in which the ball is scooped up from the ground and carried in a horizontal position. The ball is of hard rubber, about three inches or less in diameter. It must not be touched by hand or foot while the game is being played. The goals consist of posts at each end of the course. The course may be two or three hundred yards, and up to half a mile. The game consists in putting the ball past the goal. The game is now usually played with twelve on each side, but the number is optional. There is abundant opportunity for rough play; and the police are sometimes obliged to stop scrimmages in which the sticks are used like sabers to whack every

opponent that comes within range. The ball is thrown with great force from the net on the stick, and whizzes down the field like a small cannon ball.

The game is popular in Canada, and is occasionally played in the United States. It is regularly seen at the Indian school at Carlisle, Pa. The sticks are kept for sale in Chicago; but it is said that the last game was played in that city four or five years ago.

No wood except hickory will stand the strennosity of the game. The sticks are rough in appearance. They have none of the grace and fine polish of a golf stick or tennis racket, but look "home made," which they are.

The game was played by the Indians of Canada and far south in the present territory of the United States. It was popular with Sioux Indians also. The wide region over which the Indians were acquainted with it indicates that its origin was very long ago—earlier than we have any history in America.

It is now possible to make it a rough game, but it was far worse the way the Indians played it when they had the whole thing to themselves. Instead of twenty-four persons engaged, as is the custom now, there were formerly small armies. The traveler Catlin in 1763 saw 600 Indians in one game, and they kept it up for hours. Such a game was little less bloody, and no less exciting, than a Roman gladiatorial show.

A rubber ball is now used, and it is dangerous enough when slung from the net several hundred feet down the field; but such a ball is a toy compared with what the wild Indians used in their fierce games. Their softest ball was a round knot cut from a chestnut oak or some other hardwood tree. They generally used round stones the size of a baseball. In Canada and in the northern part of the United States they found exactly what they wanted in the glacial gravel beds, They picked round, smooth granite pebbles weighing from one to two pounds. These were hurled with all the velocity that the stoutest warriors could impart. One might as well be struck with a cannon ball as with such a stone slung from the net of a lacrosse-stick. The apparatus with which David knocked out Goliath was harmless in comparison. In the excitement of the game the Indians paid little attention to the lists of dead and wounded. It was part of the play.

It is significant that, as far as history shows, the Indians played the game only in the region where hickory was obtainable. It was the "indispensable wood" then as it still is. No other could endure the strains, twists, knocks and jerks of the wild games of the natives when they slung stones and oak knots down a half-mile field. Today the last remnants of the Indians who still make the sticks send from Canada into the United States to procure the wood which their ancestors used centuries ago.

Fir Wood Distillation

Editor's Note

The graph advance in wood distillation for commercial purposes indicates that much of the forest and mill wasts will be utilized in the near inture by that means. The relationing article be is descriptive of methods and products successfully bundled on the Pacific coast, where two or three woods thus tai meet the demand. There is no apparent reason why the field may not be enlarged to include many woods in various parts of the country. The article was prepared for Hymwood Riccom by Huron H. Smith, essistant curator, bivision of Dendrology, Field Museum of Natural History, Chiczon, who personally investigated to tellification work on the Pacific const.

The problem of waste in a sawnill remains a large one despite the many improvements and inventions of today. The refuse burner or dump pile has long been a source of dissatisfaction to the manufacturer, and he has progressively saved odds and ends from the flames. Lath, shingles, edgings, made-up boards from ground wood, alcohol, and wood-pulp are some of the numerous

by-products that have been saved.

Saveu.

With all the saving of waste, the manufacturer has still had to pocket a very small profit or indeed a deficit in the square timber that came from the very heart of the log. Usually these pieces are so full of knots as to place them in a grade lower than the cost of manufacture.

A good solution to this problem has taken place on the Pacific coast at Linnton, near Portland, Ore., in the establishment of the Oregon Wood Distilling Company. This heart piece of timber is the very thing it wants because it is so full of pitch. Destructive wood distillation seems to have found its proper place in utilizing sawmill waste there. In the East, wood distilling plants have been cutting their own trees and using timber that might well have been manufactured into lumber. Destructive wood distillation is not so well developed in the United States as it is abroad, particularly in the Scandinavian peninsula; but with our great supply of waste wood it seems reasonable to suppose that wood distillates may rival coal tar products in variety and usefulness.

The Oregon Wood Distilling Company is a pioneer on the coast and is manufacturing a goodly number of products and

acquiring a good market. In all, they number some twenty-four different products, but the company markets, at present, only about a third of that number.

Since the company possesses all the machinery of wood distillation, it also distills balsam from the western balsams or firs. This it buys from farmers and gathers at \$17.50 a barrel, and it is obtained by tapping the trees as for maple sap, except that in this case it is a hit or miss proposition. If a ring-shake or seam is tapped, a single tree may flow a barrel, if not, only a bucketful may be obtained. The balsam thus secured is really superior to Canada balsam, and, purified, is marketed as Canada balsam. The bulk of this product, however, is distilled and yields a turpentine

of the first quality—the finest in the world. It is of the "laevo-rotatory" type in contrast to the "dextro-rotatory" type, and is sold for medicinal prescriptions, in which market it readily brings \$2.50 a gallon. The violet odor peculiar to turpentine is absent from it, being replaced by the fragrance of the freshly cut tree. The turpentine thus obtained is so clear as to be almost a blue

white. The residue of this distillation process is fir resin, which is a solid and is highly prized in making varnishes and sizing for paper, etc. It is elastic and flexible, not brittle as so many resins are.

The main work of this plant, however, is the manufacture of distillates of Douglas fir. The plant is quite near the sawmill of Clark & Wilson, and the heartwood of the fir is all lightered down to it on the Willamette river.

The heartwood of Douglas fir is unsuited for regular clear lumber because of its seams, cracks, dotiness and pitch. All such wood is reduced to 4 by 6 inch blocks and hoisted into retorts, about eight cords to a retort. Distillation is then started by intense heat. After it has progressed a certain time the gas of distillation is turned into the furnaces for fuel. The first thing to come over the retort is steam turpentine of about .87 degrees specific gravity. This is used as a painters' medium and is yielded in quantities of from one-half to four gallons per cord, depending on the amount of pitch in the wood. Following this a black substance is driven over, which, when separated out, is a tar of an excellent quality suited to medicinal purposes. The last part of all to come over from the retort direct is fir oil, a

A BATTERY OF STILLS AT WORK CONVERTING WOOD INTO VARIOUS COMMERCIAL COMMODITIES

heavy oil of .96 degrees specific gravity, which contains a large percentage of "turpineol." "Turpineol" was analyzed out by Professor Benson of the University of Washington, at Seattle, and is a highly useful product in medicinal uses and in the arts.

The destructive distillation combination that has remained in the retort, is transferred to the still and there separated into its various products and degrees of density. At a temperature below and up to 150 degrees centigrade light oils are driven off. These are a mixture of turpentine, methyl alcohols and very small portions of other things. This product is sold as number 2 turpentine or preferably used in combination with a later product for a trade product. The tar oil of this distillation could be

sold but is also used to make a accu product. The heavier thin tar oil next supuration used extensively a medicinal work. making silves, or rates. Lowers perous applications for stock discusses etc. A control Pi for positis trop this still that is admirably adapted to tarring ropes, ship chandlers' uses, etc. The fir patch from this still is the finest grade of bitch obtainable and is used for caulking. roofing, etc. Being quite stiff, yet clastie, it exce's any other pitch known for eaulking seams in boats, It will hend slightly with a

strain and yet will not soften under ordinary temperatures. It has a very glossy refractory surface and is tasteless.

Under the trade name "fir oil" the light oil and tar oil previouly mentioned are combined and make practically a nonweathering medium for paints. A further concentration and combination is sold under the name "orwood" for shingle stains. and contains some fir creosote. It is much used in California where the bungalows are sheathed entirely with shingles.

The heaviest oil obtained from this still is ""iroleum," which is rich in creosote and is used on the coast in a creosoting process for wood paving blocks. Being more fluid than the usual creosoting products on the market, it penetrates the wood cells much more readily and furnishes a longer wearing surface.

THE LAST PRODUCT OF WOOD DISTILLATION TIS RANGE OF TREES EXTENDS FROM FUEL FOR FURNACE TO LELD FOR FOWL

of the process in

It is used in a con spray," and withbark, kills moss, San Jose scale, and

The remainder left back in the retort is, of course, charcoal, a very ex-

cellent grade, and the pieces look like eLony replicas of their former selves-the spring and summerwood of the annual ring is as distinct as formerly, knots and saw marks are all preserved. At the time the writer visited the plant, it was about one hundred carloads oversold in California, where it went to the chicken ranchers, who grind it and mix it with chicken feed to make the hens lay. The final product of this nature is the dust of charcoal which is used in filters and by wholesale manufacturing druggists.

It is hoped that this description of the products of destructive wood distillation will interest others, who may engage in a lessening of our tremendous wood waste-waste that is raw material for some very valuable distillates-waste that could be had almost for the asking, waste that may make some one wealthy.

Sane Forest Fire Protection

Editor's Note

The following report was read by J. S. Hickok, chief warden of the Forest Fire Protective Department of the Michigan Hardwood Manufacturers' Association, before that body at its regular quarterly meeting at Detroit, on the 122. It is berewith presented in the helief that it offers suggestions of infinite value in the formation of a definite forest protective policy, and in the further belief that protection against forest fires is coming to be realized to a greater degree cach year as one of the most necessary provisions in connection with modern logging operations involving vast investments in high-priced stumpage.

In reporting on our second year's work of protecting the remaining forests of lower Michigan against forest fires, I am pleased to say that whatever success we have attained in controlling fires, thus limiting the possibility of tremendous loss, is largely accounted for by the painstaking and careful work of your wardens and the co-operation of the people and the press within the fire zone.

When this department was organized, a little less than two years ago, we entered a field of endeavor wholly untried in this locality. We set out determined to win in the battle against fire and the great havor of fire damage from which the upper part of lower Michigan had suffered for so many years. We were advised by many that the elimination of disastrous forest fires could not be accomplished, that fires had swept the country for generations and would continue to do so for years to come. At the very outset we encountered the careless use of fire in a large degree and ignorance of the law almost beyond belief. Fires had become so prevalent during the summer months that a season without them would have been marvelous, indeed. With the elimination of carelessness, the chief cause, resulting in the safety to residents of the forest area, it is reasonable to expect a keen interest in the "no forest fire" idea and we may anticipate that before many years, destructive fires will become a condition of the past, remaining only as a matter of history,

In our report of one year ago, our records showed an exceedingly small loss to members of this association during that year and, while it becomes necessary to report a somewhat heavier loss this year, at the same time we realize that we have passed through a season, the possibilities of which were very favorable for heavy losses had not prompt action been taken during critical periods. The season of 1912 was notable for an excessive amount of rainfall, the dry weather being of short duration and devoid of high winds.

The fire season of 1913 was characterized by a dry and heated atmosphere accompanied by winds of great velocity, these conditions continuing for periods of from two to three weeks. Although the slash and forest lands were extremely dry and at times many fires

were in evidence, we feel sate a, saying that our losses would have been of no consequence had we been sparred the sweeping gales which every one knows makes fire control a very difficult problem. The past summer, when compared with those of other years, doubtless proves to the satisfaction of all concerned, that faithful and alert patrol of forest areas is productive of a great saving in fire losses. In the past years, with the possibilities of destruction being no greater than the present year, millions of dollars in property losses have become a matter of record.

The character of the work taken up this year has been along the same lines as during the season of 1912. Throughout the summer a very comprehensive patrol system has been maintained; also systematic arrangements for locating, reporting and fighting incipient fires have been carried out. The splendid and cordial co-operation, accorded this department by the residents, timber owners and operating lumbermen, is the predominant factor in the protective movement. The charge of indifference that formerly was made against residents and lumbermen is no longer well founded in the majority of instances. The general public has discovered it pays to prevent and extinguish fires. They have come to realize that the remaining stands of virgin forests are a public resource in the taxes they pay, as a minor consideration, and in the wealth they eventually distribute throughout the community, as the more important matter. Township officers have learned that the constant patrol feature, in connection with the educational system of our department, is entirely responsible for the reduction of fire fighting costs and the preserving of the tax value of timber lands in each township. And we are pleased to report that the majority of supervisors and township boards are desirous of co-operating with us in every way possible. We must confess we hardly expected this co-operative spirit to become so pronounced in the second year of our effort in forest protection.

During 1912 many of the settlers, living in close proximity to forest lands, were non-committal in their views relative to "no forest fires." These same residents this year are imbuedl with the protective idea and have been of material assistance in keeping down the fire loss by being careful in the use of fire and by giving prompt assistance in extinguishing and reporting those which the occasional careless person had allowed to escape. In recording the able cooperation we have received we wish it were possible to say that this applied to every individual. However, we can not at this time or doubtless any time in the future say that every man has learned the lesson of absolute care. Eighty per cent of our people today are careful but, in all probability, eternal vigilance shall be the price we must pay in keeping the other twenty per cent in check until the majority of these become educated in the ways of careful inen.

Your wardens have spent considerable time and effort in laying before the several supervisors, throughout the patrol area, our cooperative plan for the destruction of accumulated slash, the detail of which we gave in a previous report. We are pleased to be able to say at this time that the idea is meeting with the hearty support of all and will be tried out during the spring of 1914. The slash problem has been given much thought by this department, and to put in action a plan whereby we shall remove at least fifty per cent of the danger from this source will materially reduce the hazard to forests and their products. The money which will be saved by townships in fire fighting costs, and the menace to settlers and timber owners thus removed is a large incentive to all concerned to take hold of the work and make it a success.

During the patrol season, three violations of the fire law were reported to this office, backed by affidavits of convicting evidence. In each case, we investigated these reports and found that the parties were guilty of gross carelessness and, without doubt, convictions could have been secured had these cases been taken to court. However, this department decided on a plan of leniency in handling first offences, where no malicious intent is shown, which we believe will be of more benefit to the cause than would be gained through prosecution. In each of the cases cited, the prosecuting attorney was interviewed and the evidence submitted for his consideration. The request was made that the party be brought before him and

lectured on the careful use of fire with the understanding that the present charge should stand against the party and a warrant for his appearance would be issued upon satisfactory evidence of any further violation. Your chief warden was present at each of these hearings and was given the privilege of outlining the aims and methods of this department. We explained that we did not wish to injure anyone financially or otherwise but must insist on every person using fire with care. We made the liberal offer to take charge of and assume all responsibility of any future slash parties might wish burned and we are convinced that, in each case, we made a friend to the cause we represent. We believe the method adopted in the above cases has an educational value paramount to a trial by court with a fine attached. However, we wish to have it understood that second offences will be looked upon as malicious and when the evidence of the origin of fire is forthcoming a warrant will be asked for and the case prosecuted to the limit of the law.

Between the dates of April 20 and October 10, 299 fires were discovered by your wardens and prompt measures taken to extinguish same. In every case the cause was investigated and the area burned, together with damage, if any, was carefully estimated. A full and complete report was then made in writing and forwarded to this office. Your men are instructed to make a careful study of each fire attended by them and learn, if nossible, the origin.

If we desire to apply a remedy we must know the cause in order that we may try to prevent a repetition in the locality where fire occurs. The fires investigated resulted from the following causes: Fishermen carcless with comp fires..... Campers careless with camp fires..... Berry pickers careless with matches and camp fires..... Smokers careless with pines and matches..... Boys playing with fire..... Log loaders throwing cinders..... Traction engines throwing sparks..... Fern pickers careless with matches..... Dynamite Probably malicious Unknown

Thirty-five thousand nine-hundred acres, principally slash lands, were burned over during the season. Less than one per cent of the area burned was in green standing timber, fires being checked or headed in another direction before reaching timber line.

The loss, here reported, we believe may be considered small when compared with other seasons now past. The burning of 35,900 acres was especially dangerous as the area was covered with a highly inflammable material and the fire, at times, was driven by the onrush of heavy gales of wind which materially enlarged the possibility of loss, especially so when the large amount of harvested timber subject to the hazard of fires is considered.

We are pleased to report there is much interest being shown in the movement against forest fires by the management of the following named railroad companies: The Michigan Central, Grand Rapids & Indiana, and the Boyne City, Gaylord and Alpena. These roads have and are still making a great improvement in locomotive screens and they have instructed their employes to use every precaution against the spread of fires set along the right-of-way. For your information and in justice to the above named railroad companies, we submit the following comparisons:

Season of 1912

Michigan Central Railway used screen with 15-64 inch opening Grand Rapids & Indiana used series with 15-64 inch opening.

Boyne City, Gaylord & Alpena used serien with 14 64 inch opening Total fires set by locomotives was 148, which is 65 per cent of the total number of all fires recorded.

Season of 1913

In the latter part of the season the Michigan Central installed screen with a 12 64 inch opening in place of the old screen.

with a 12 64 in a opening in place of the old serven.

In the latter part of the season the Grand Rapids & Indiana Railway
Company installed screen with a 12 64 inch opening in place of the old

Boyne City, Gaylord & Alpena engines came out in the spring equipped with perforated plate with an opening of 11 64 by 1^{4}_{4} inches.

Total fires set by locomotives was 89, which is 30 per cent of the total number of all fires recorded.

It is not in Levil and entitle that there is a 200 to present ing made in radical equipment. The indications are that a large percentage of the locomotives operating in the fire zone are now using screens with 12-64 inch openings with the exception of the Pere-Marquette Railway Company which, so far as we are able to learn, is not making any changes but is still using 15-64 mesh screens in the front end of its becomptives. We appreciate the effects the railway companies are making to cut down the number of fires set by their engines and we trust that next season we can report even a

The time to have a definite understanding of terms of sale is when an order is placed—not after shipment is made.

Conversion of Logs Into Veneer

The figures on vencer production for 1905 show that 181,146,000 feet of material, log scale, were converted into vencer that year. The output comprised 1,108,518,000 square feet of vencer, made from fifteen kinds of wood, listed by name, and certain others which were figured in the total but were not named separately.

Recent statistical returns give the veneer cut in log scale only, but the early reports gave the log measure and also the superficial measurement of the product. Veneer, as is well known, is thin lumber. It is cut from a little more than a quarter of an inch in thickness to less than one-one-hundredth of an inch. A log which would make 500 feet of lumber one inch thick will be good for several times that many feet of veneer, surface measure.

It will perhaps surprise those who are not acquainted with the actual production of veneer that the average output of surface feet is so small compared with log scale. The census reports for 1905 and 1906 give the log scale and also the surface measure of the veneer produced from the logs. The following table gives these figures for all the veneer reported in the years 1905 and 1906:

	1905	1906
	Sq. ft. veneer per	Sq. ft. veneer per
Wood	1.000 ft. log scale	1,000 ft. log scale
Red gum	4.700	5,667
Yellow pine	3,234	4,000
White oak	7.160	6,327
Maple		10,300
Cottonwood	2,758	3,711
Yellow poplar	5.785	7,966
Basswood	7,283	4.779
Birch	10,200	8.170
Elm	10.958	7,630
Tupelo	5,752	5,024
Red oak	6,253	7,526
Beech	13,400	7,500
Ash	8,797	5,700
Walnut	12,279	13,121
Sycamore	2,500	3,990

This shows that on an average for that year 1,000 feet log scale made ${\bf 6,000}$ superficial feet of veneer.

The average thickness of the veneer is not given, consequently the percentage or ratio of log scale to the output of veneer cannot be ascertained. The thinner the veneer, other things being equal, the more superficial feet will result from the conversion of 1,000 feet of logs. That is, a log will make more superficial feet of veneer one-twentieth of an inch thick than of one-tenth inch. The foregoing table does not, therefore, furnish a basis for estimating how much veneer of a given thickness a thousand feet of logs will make. What it does show is that, averaged for the whole country that year, the ratio was one to six. That included rotary cut, sawed, and sliced: The rotary cut amounted to 1,842,818,000 feet, the sawed and sliced to 225,276,000.

Where material is perfect, or nearly so, there is comparatively little waste when logs are converted into rotary or sliced veneer. The core of seven inches, or thereabouts, is the largest item, and

this is often saved by sawing it in erate stock or other small dimensions. But perfect logs are scarce. Knots, shakes, frost cracks, dote, and other defects greatly reduce the output from the average run of logs going to the veneer mill, and breakage in otherwise perfect sheets still further reduces the output. Some experienced veneer manufacturers consider a waste of twenty-five per cent very low.

There is no average thickness for veneer. If an average were calculated for one year, it would not hold for any other year. Some thicknesses represent much more of the output than others. This may be shown by quoting extracts from the reports of manufacturers in 1909, which was a year of very complete returns, being the decennial census year. The table which follows shows the amount of every thickness produced, both rotary cut and slived or sawed. The figures are all log scale, since the superficial measurements are not given in the reports for that year.

	Rotary cut, feet	Sliced or sawed, f
5-16 inch and over		3,500,000
13-42 inch		
9-32 inch

1-20 inch		16,688,000
1-21 inch		
1-22 inch		15,000
1-24 inch		1,527,000
1-24 inch		15,000
1-27 inch		10,000
1-28 inch		2.264.000
1-30 inch		2,592,000
		2,002,000
2 0 1000		
1-33 inch		
1-34 inch		
1-36 inch		
1-50 inch		404.000
1-100 inch		436,000
1-110 inch		135,000
Total	.390,929,000	45,052,000

The very thin vencer, one-one-hundredth of an inch in thickness, or less, was all Spanish cedar, and presumably was used by eigar box makers. The thinnest rotary cut vencer was maple, one-fiftieth inch thick.

Keeping Tab on Car Movements

Lack of system is one of the most generally noted faults in the offices of lumbermen the extent of whose business is sufficiently great to suggest the adoption of reasonable methods of preventing errors and loss.

Cases are on record of cars being shipped out without a proper record being made and without an invoice being sent to the customer. These cases have been uncovered by accident. There are plainly many others, not located, which have been handled in this way, to the inaterial loss of the lumber company.

If a business is small, and if the owner of it is on the job all the time, the chances of serious errors are slight; but when the concern has grown to such a point that the memory of the head of the establishment cannot contain all of its details, the opportunity for loss is considerable.

A leading wholesale hardwood concern has recently adopted a checking system for keeping tab on cars, which seems to be worth general adoption. The system is used in connection with shipments from its local yard, and also with reference to shipments from the several mills which it is operating. The plan has the advantage of simplicity, and yet seems to provide an absolute check.

The basis of the record, of course, is the tally. Turning in the tally of the inspector is followed by making out a shipping ticket, in duplicate, containing the results of the tally. These shipping tickets are numbered consecutively, consecutive numbering, in fact, being the basis of the entire system.

The sheets of the salesbook are also numbered, its numbers corresponding with those of the shipping ticket. The entry in the salesbook, in addition to containing the facts shown on the shipping ticket, likewise indicates the price at which the lumber was sold, and the books of the concern are posted from this record.

In the case of the local yard, the duplicate of the shipping ticket is not needed particularly, but where the shipment was made from a distant mill, the duplicate is kept on file at the mill for the information of the superintendent.

The bill of lading is issued in triplicate, as usual, and the car number and other information are entered in a book used for that purpose exclusively. The entries are numbered, the numbers corresponding with numbers printed on the bill of lading itself.

This is the entire system. Now let us consider how it works and what conditions it is calculated to take care of. In the first place, the use of consecutive numbers furnishes a "flag" or warning by which any lost or omitted record can be indicated. For instance, if the person in charge of the salesbook notices that one number is missing, the local yard or the outside mill, as the case may be, is called on to supply the missing number.

On the other hand, the salesbook is checked against the bill of lading book, and it is determined that an entry for the salesbook, which, remember, is the basis for the ledger charges, has been made to correspond with every car shipment indicated by the bill of lading book. The use of the consecutive numbers on the latter insures the proper entry of every car, for in the event of failure to turn in the bill of lading used for this purpose, its absence is immediately noted. The use of consecutive numbers and duplicates means that a lost record will be noted, and that it can be rewritten without inconvenience.

Another feature of the bill of lading book which is worth noting is that provision is made for handling shipments which are not made in the routine way. For instance, if a car of lumber is purchased at one point, shipped to another for drying and then reshipped direct to the consignee, there is a possibility of the record being incomplete and inaccurate by reason of the tie-up at the kiln, or the suspension for any reason whatever at any other point. To take care of this, the bill of lading book, containing the car number and other information, carries a special indication that the movement is incomplete, and that a further

record must be made of its final disposition. This prevents the item from being lost track of, and insures attention being called to the status of the situation.

The head of the concern which has adopted the system referred to said that the checking arrangement was not made simply because of a craze for "system," or to introduce red tape into the office. He explained that actual experience had demonstrated the need of some such protection, and that it was furnished for that reason only.

"We know of two cars which got away from us prior to the time we put this system into use," he said. "One we located because the customer wrote to make a complaint about some feature of the shipment. That called attention to the omission of the record and enabled us to get track of it. In another case the customer was simply honest enough to call our attention to the fact that no invoice had been sent, enabling us to make an investigation and determine the car which had escaped the proper record.

"Take the bill of lading question, for example. No car is shipped without a bill of lading being made out, of course; but when unnumbered pads are used, it frequently happens, or at least can easily happen, that in case of a 'jam' in the office, someone will hurriedly make out the bill without referring it to the proper party for entry. The result is that the car is sent on with no record behind it. This cannot happen under our system. Then again, tally-sheets may become lost and no salesbook record be made. In that event the entry in the bill of lading book gives us the clue and enables us to ascertain the information we need.

"It might be supposed that the introduction of a system of this kind has been accompanied by an increase of work. On the other hand we have found that in most cases it has cut down the amount of labor required. Heretofore frequent copying, by hand, was necessary to have the proper records made. Now, with a loose-leaf system installed, the facts can be written on the typewriter, copies made at the same operation, and time and labor saved. It must be remembered that the smaller the number of clerical operations, the fewer the chances for mistakes of that kind to be made."

Another feature in connection with the checking operation is keeping tab on wagon business. In the big wholesale yard or sawmill, where carload business is the principal item, wagon haus are likely to be overlooked if close attention is not given them. Even in retail yards, where wagon business is the only kind of trade handled, it is well-known that unless a systematic method of checking this business is provided for, wagons will get out without being recorded and the lumbermen will be able to make no charge.

For this reason it is desirable that the same sort of record, in general, be used for wagon-load hauls as for carload movements. That is to say, a ticket, in triplicate, with consecutive numbers appearing, should be used. The yard office man of course keeps one of the tickets; one is sent to the customer with the wagon, and the other goes to the office. Here again the simplicity of the scheme and the fact that the tickets are consecutively numbered operates to call attention to an omission.

It is possible, of course, for a careless driver to leave without thinking to get the ticket, or for a careless clerk to wait until all of the loads intended for a certain customer are sent out, before making up the tickets; but if the concern insists on every wagon being ticketed, and if its customers become accustomed to receiving a ticket for each load—an arrangement which is a protection to them as well as to the seller—arrangement will soon become a matter of routine to everybody in the yard, and will be taken care of accordingly. The systems referred to have been designed for the purpose of preventing innocent mistakes, but would also serve as a check on dishonest employes.

G. D. C., Jr.

Red Gum

1TS HISTORY, STAND AND CUT

The people of the United States are beginning to take inventories of natural resources. Formerly that was not done, because it was customary to consider that all-bountful nature would go on forever supplying the necessities if not the luxuries of life to the fortunate inhabitants of this country. People are beginning to learn better. They now understand that a natural resource may be impared to a reason of the latter than the state of the stat

taken care of or it will not last indefinitely.

Timber belongs in that class, and red gum may be given special consideration because it has reached a prominent place in the country's industries. That position has been attained quite recently. The oaks. pines, vellow poplar, walnut, and many other woods were well known long before the general public had heard of red gum; but when once it had attracted attention its carture of a large market quickly followed. Inquiries are frequently made as to the length of time the gum supply will last. The answer depends upon the available quantity, and the rate of cutting.

The range of red gum begins in the Northeast in Connecticut, and follows a fairly straight line southwesterly to Missouri, and from there the boundary of its range veers sharply toward the south to Trinity river, Texas. This tree is found in all the states south and southeast of that line; that is, in the southern states. The largest stands are in the lower Mississippi valley. Estimates based on statisties collected by the Bureau of Corporations place the total stand of this wood in the United States at about 50.000,000,000 feet, board measure. In amount it is equal to about one-fourth of all the oaks in the country: two and a half times the hickory; three times the ash; one-fifth more than eypress; nearly three times the maple; many times the elm; and except the oaks, it exceeds in amount any other hardwood, or group of hardwoods in the United States. In fact, it is estimated that one-eighth of all the hardwoods of this country is red gum. It is, therefore, apparent that it is a timber of great importance.

The next question is how much is cut annually; for, if the available quantity is known, the rate of cutting will determine the probable time it will last. The figures on lumber output, compiled by the Bureau of the Census and the Forest Service, give the following cut of this wood by states.

CUT OF RED GUM BY STATES IN 1911

State	Feet B. M.	State	Feet B. M.
Arkansas		Illinois	 5,209,000
Mississippi		Georgia	 3.120,000

The above is the red gum lumber output. It is by no means the whole demand for this timber. Veneer manufacturers cut 155,175,000 feet, log scale, a year and the makers of slack cooperage produce 416,000,000 red gum staves. A considerable quantity goes into railroad ties, and other articles. It is safe to say that the total cut of red gum for all purposes at present does not fall short of L000,000 feet a year.

This enormous drain will not exhaust the supply now available in less than half a century. By that time stands now young will be almost ready to cut, if the growing there are 2000 to 1000.

Red gum is sold in all the leading markets of the United States. Complete figures showing the quantity going into all the states annually are not available, but as far as they are to be had they are given in the table which follows. All are government figures except those for West Virginia which were supplied for the State Geological Survey, by

Red gum is a wood entirely different from black gum and tupelo.

These three trees are generally spoken of commercially as being

These three trees are generally spoken of commercially as being closely linked but there is no justification for such an assumption either from a botanical or a lumberman's standpoint. Neither black gum nor tupelo gum commands anywhere near the important position of red gum. Its nearest relative among the trees of this country is the small and worthless witchhazel. If they were human beings they would be rated as first cousins. Good trees, as well as worthy people, sometimes have very shabby relations.

FOREST GROWTH OF RED GUM

Northern Lumbermen Meet

The fall quarterly meeting of the Northern Hemlock and Hard wood Manufacturers' Association was held at Eau Claire, Wis., October 29, where the members of the association were guests of the John H. Kaiser Lumber Company and the New Dells Lumber Company. The treasurer's report showed a balance on hand of \$3,763.53. The condition of the association was discussed in the report of the secretary, R. S. Kellogg. He said that the usual number of reports upon proposed logging operations this winter indicate about the same hemlock input as last winter, but quite an increase in hardwood logging.

The reports upon woods wages show an increase of about five per cent over 1912, or about the same increase that 1912 showed over 1911. Following is the schedule:

. Average woods wages per month including board at present compare as follows with reports in October, 1911 and 1912:

	1913	1912	1911
Choreboys	29,90	28.50	26.00
Roadmen	30,80	29.10	27.40
Swampers	31.00	29.30	26.40
Cookees	32.80	30.80	29.00
Sawyers	34.30	32.90	29.80
Barnmen	35.00	34.50	31.90
Hookmen	35.60	34.20	31.30
Teamsters	35,80	34.20	31.40
Top Loaders	39,60	37.80	34.80
Blacksmiths	59.25	55,90	56.50
Cooks	67.50	66.50	64.75
Engineers	68.88	68.20	73.00
The state of the s		book it in	4 h an al t

Indications point to a good supply of laborers, but it is thought that the cost of feeding them will be greater than last year. Beef in particular is higher, but a suggestion was offered that soups, dumplings, and other things that a good cook could prepare might partly take the place of beef.

The Industrial Commission, with free employment offices at Milwaukee, Oshkosh, La Crosse and Superior, has supplied a good many woodsmen, and it is said that with the benefit of previous experience and records which are being compiled, these offices are now able to supply a better grade of labor than when they were first opened. Arrangements are practically completed for the establishment of a fifth free employment office by the Industrial Commission which will be located in Wausau, so firms whose operations are easily accessible from that point will doubtless be able to get considerable help through the new office.

The association has subscribed for forty-five shares of stock in the Forest Products Exposition Company, and an appropriation for the exhibit of \$2,500 was made to be expended by the advertising committee, if mutually satisfactory to the Michigan association which has appropriated a like amount. It is proposed that the two associations join in making an exhibit.

It was recommended that the association become a member of the National Conservation Congress which meets in Washington, D. C., November 18-20. The membership fee is \$25, and the principal advantage to lumbermen would consist in giving them a voice in many important conservation matters that will be before the public from time to time, some of which vitally concern timber interests.

Trade conditions were reported excellent for northern hemlock and hardwoods, and there is no indication of a coming change for the worse. Building operations have been good, and there is no danger of an over supply of lumber in Wisconsin and Michigan.

Cut and shipments, Oct. 1, 1912, to Sept. 30, 1913:

	Cut	Shipped
Hemlock	4 ^0,963,000	460,514,000
Ash	7,066,000	8,742,000
Basswood	₹7,044.000	53,536,000
Birch	\$5,374,000	99,869,000
Elm		30,559,000
Maple	80,850,000	83,540,000
Oak	3,119,000	3,268,000
All hardwoods	328.551.000	314.155,000

Reports upon log input and woods wages have been received from seventy representative firms throughout Wisconsin and northern Michigan.

The log inpet of the reporting firms last season and the logging planned for this winter compare as follows:

		Hemlock	Hardwood	Fine.
		M. Freet	I Feet M Feet	M. Feet
Logged	1912-13	 341,551	232,473	76,753
Expect	to log 1913-14	 351,800	271,950	67,252
				Feet
Logged	1912-13 all kinds	 		650,777,000
Expect	to log 1913-14 all kinds.			691,002,000

An address describing methods of kiln-drying lumber was given by H. D. Tiemann of the United States Forest Service. Mr. Tiemann is the inventor of a dry-kiln, the patent for which has been dedicated to the public. His address began with well-known facts that:

Lumber must be dried before used

Lumber when seasoned is in a condition it has never been in before.

Drying lumber is not simply the evaporation of moisture but a material change in an interwoven structural material.

Kilns are not all giving complete satisfaction as indicated by the inquiries we receive from all parts of the country.

Speaking of the structure of wood he said that it was similar to honey comb, the difference being that the cells were longer. Water is in wood in two conditions—one from the water filling the cells and the other imbibed water in the fibre of the cell walls. The removal of water from the cells of wood makes no change in the structure, but removal from the cell walls changes the wood and causes shrinkage and also makes it stronger.

He said that the chief objects of drying lumber were (1) to reduce the shipping weight (2) to reduce the quantity of stocks in the yards; (3) to improve the quality of the woods, especially hardwoods; (4) to prepare lumber for the uses to which it is to be put.

Mr. Tiemann said there are three types of kilns, first, the dry air type, which is now becoming obsolete; second, the moist air system of which there are many kinds, and third, superheated steam kilns.

In the average kiln as used at present actual loss in the stock varies from one to three per cent, due to checking, warping, etc. With some woods, such as gum, it goes as high as thirty per cent or more. Air drying lumber does not invariably produce good lumber chiefly because no control can be exercised over conditions affecting the seasoning. With proper kiln construction drying can be better controlled and proper kiln drving saves the loss that comes from air drying. Lumber proper kiln dried will not absorb as much moisture as air dried lumber, thus eliminating much of the liability to shrink or swell. In drying lumber in kilns care should be taken that evaporation from the surface is not faster than transfusion from the interior. If the surface is dried too rapidly checking or case hardening will result and then the interior of the wood will check. In proper kiln drying three things can be accomplished: (1), the control of humidity which is one of the most important things in a kiln; (2), the control of temperature-soft woods are less affected by high temperature than hardwoods, and (3) the control of circulation. The control of humidity, circulation and temperature are necessary to the best work in drying lumber.

The advertising committee reported that the publicity campaign had brought highly satisfactory results. More than 1,400 replies had been received from the birch advertisement alone, chiefly from architects, builders, contractors, and carpenters. The committee closed its report with the following pointed paragraph:

Some members have expressed themselves as believing that the remarkable firmness in hemlock prices and the advance in birch prices this year in the face of adverse conditions elsewhere in the lumber industry have been due to our advertising campaign. While we do not feel like claiming such large results in so short a time we do believe that our advertising appropriation has been fully justified, and that it should be regarded not as an office expense, but as a judicious investment which is bound to have a most beneficial effect in the sale of our products.

W. J. Kessler, chairman of the insurance committee, then read the following exhaustive and instructive report:

Report of Committee on Insurance

Your committee on insurance has, within the brief time that has been allowed, gone into the matter of fire insurance as thoroughly as possible.

The subject of fire insurance in relation to lumber risks is a deep and intricate one, and realizing fully how very uninteresting a mass of statistics and figures on this subject would be to a meeting of this kind, we have aimed to eliminate as much of that kind of matter as possible.

During the investigation which this committee has carried on quite a number of our members were consulted, and it is very surprising to learn that the question of fire insurance rates appears to be a proposition quite foreign to their interests, they apparently being satisfied to pay the rates imposed, with the evident feeling that these rates are so fixed and invulnerable that there is no recourse.

For the purpose of a little enlightenment for a number of the members, and by a special request, the committee will ask your kind indulgence

while it treats on the elementary principles of insurance

First, we will take up the question of rate making. The question has been asked us how are these lumber rates made. All fire insurance rates in Wisconsin are made by what is known as the Wisconsin Inspection Bureau, under an analytical system of rate making known as Dean schedule. This assumes a certain standard risk and makes additions for defects in construction and hazards from occupancy and exposure and gives credits for advantages in construction and fire protection. These charges and credits are made by percentages upon a basis charge. This basis charge is a definite number of cents per \$100 of insurance, and a basis table is adopted for the state, which provides for different basis rates, for the various cities, classified according to size, fire protection and other conditions affecting fire hazard. The adoption of this basis table and classification of the cities is a matter of individual judgment of the person applying the schedule, and it has been shown in adopting this schedule for Wisconsin at the time of the introduction of the Dean schedule, an attempt was made to approximate as nearly as possible the existing rates.

In this state a local board of underwriters or an association of local agents in any city or village are authorized by statute to establish and maintain rates therein. This statute enacted in 1897 specifically prohibits all other attempts to establish or maintain rates, and these local boards are the only rate making establishments recognized by our law. The practical operation of these boards, as developed from testimony in the investigation which our legislature of 1911 ordered, is of some interest. The cities of Milwaukee, Madison and Superior have boards which employ their own expert raters and operate independently of the Wisconsin Inspection Bureau, through which the estimates of rates for the rest of the state are made. The Wisconsin Inspection Bureau, which is located at Milwaukee under the management of H. C. Griffing, makes surveys and so-called estimates, and these estimates are sold to the different companies and furnished to their agents as required. Variations from these estimates are comparatively rare. Where variation has been made from these estimates it was done in favor of a large insurer, to meet mutual or other competition from outside of the members of the

The testimony referred to is practically unanimous that there is no competition whatever between agents representing local boards or between companies whose agents are members thereof. There have been instances where agents of established companies outside of the local boards have written risks in a city at a rate lower than the board rate. It is claimed that when this has been discovered the local boards have demanded of the companies taking such risks that the same be cancelled and that such cancellations have been made. There is in these instances a direct clash between the representatives of companies, and agents who seek to maintain rates, and of the insured who seek the lowest rates. With the local agents authorized by law to co-operate in making and maintaining rates to be charged by them, and with no appeal from such action, it is not to be wondered that insurers, whose premiums are sufficiently large to warrant attention to the subject, protest and seek insurance outside of the local agents, and often from companies not authorized to transact business in this state.

The problems of fire insurance rates are under scrutiny, not only in Wisconsin but in many other states. Our present system of regulating the business of the insurance companies seems to be at fault. There seems to be an increasing public demand that the state shall take this subject in hand and make a thorough investigation. The proposition, however, is so large that it will be some time before the legislature can handle this problem intelligently.

The field of supervision has extended to the question of the cost of the insurance, and the possibility of the reduction both in our fire loss and in the expense of distributing that loss. The property destroyed is the smaller part of the loss for which fires are responsible. The expense of the insurance is almost equal to the loss which it distributes. The cost of maintaining fire departments and other fire protection is not much less. Worst of all, the business of fire insurance appears to be so conducted as to tend toward increase rather than decrease of the fire losses. The business of insurance and the amount of money handled increases as the loss increases. The agents of the companies who are best acquainted with the property insured are paid a percentage on the premiums they collect. The higher the risk of loss and consequent premium the higher the payment to the agent. The greater the volume of premiums the greater the business and consequent chance of profit to the companies. It is a credit to the companies and agents alike that in spite of this condition, a movement for fire protection has been promoted by the companies and joined in by many of the agents.

It is, however too much to expect that the activities of the companies or their agents shall extend toward comprehensive fature plans for the practical elimination of fire waste, and consequent reduction in the business of insurance, such as has been brought about in the Eurobean countries The agitation over the question of fire insurance rates has resulted in legislation in quite a number of the states. Our begislature of 1011 ordered an investigation into matters relating to the besiness of fire insurance and prevention of fires. The committee which was appointed by the legislature has held a number of meetings and taken a lot of testimony in various cities throughout the state. This committee is required to make its annual report with its recommendations on or before Dec. 1 of this year. Its work has not progressed to a point where any definite conclusion has been reached, and any statement of conclusions should be deferred until the committee report is made. have already referred to some of the findings of this committee, which comes to us as advance information.

Some time ago Mr. Kellogg gathered some very interesting statistics on fire insurance rates from the members of this association. The rates paid by our various firms show a great disparity and range from \$1.50 to \$6.70 on sawmills, from 90 cents to \$6,30 on planing mills and from \$1.10 to \$3.60 on lumber yards. Some of the lower rates, of course, being preferred risks, such as sprinkled mills, well protected lumber yards, etc. In another report which Mr. Kellogg published, and which touches a vital part of the subject before us, is the ratio of losses to the premiums paid. From information which our secretary procured it was not possible to segregate intelligently sawmill risks, planing mill risks and lumber yard risks, for the reason that in a number of instances these risks were combined. The forty-two firms reporting show a total loss ratio for a period of ten years of something like twenty-three per cent, It is amusing indeed to compare these figures with the figures that the old line companies submit. Replies have recently been received from some twenty-five or thirty of these old line companies, in which they all invariably claim that their Wisconsin experience with lumber risks has been most unsatisfactory, and that their loss ratio runs from sixty to seventy per cent. Giving them the benefit of all doubt in this matter, and recognizing fully that in the compilation of these figures they group not only lumber but other woodworking hazards, this committee is inclined to doubt the correctness of their statistics.

Of course this feature must be taken into consideration in the comparison of these loss raties, the figures which Mr. Kellog has compiled and which show a loss ratio of twenty-three per cent can be justly termed preferred risks, while those of the old line companies undoubtedly include a great many poor risks. The sawmill away back in the woods, without any fire protection whatsoever, is a poor risk. When they have a fire their loss is generally total and their loss forms a very important factor in the loss ratio of the old line companies.

The question which is before this association, and which has been given to this committee to solve, is "Can we reduce our present apparently exorbitant fire insurance rates?" We believe that if this matter is intelligently handled, quite a material reduction may be effected. useless for us as individuals to attempt to batter down the rates of the old line companies, operating under the so-called board rates. proposition must be handled collectively. Your committee recommends, first, co-operation with the National Lumber Manufacturers' Association. which is now actively engaged on this very same proposition. In a recent interview with Secretary Rhodes we were informed that the National association has in view the formation of an inter-association, national in its scope, to be composed entirely of lumbermen. The National association first had under advisement the project of taking over one of the now existing inter-insurance associations, but this plan has not been taken to very kindly, and a feeling seems to be manifest everywhere that this business of insurance is distinctively our own business, and that it should be handled and managed by the lumbermen themselves.

Mr. Rhodes advises us that interest in this proposition is very intense, particularly in the West, and that this proposition will soon be developed into something tangible. You of course will understand that in an inter-insurance association, such as the National association is to form, only a certain percentage of your risk can be safely handled. Perhaps the limit of liability accepted by such an association will not be over twenty-five per cent. The balance of your risk will still have to be placed elsewhere.

Here we wish to lay before you the remedies proposed by Mr. Holt of the George II. Holt Company, insurance expert of Chicago, who addressed our convention at the Green Bay meeting in July. We were unable to form any comprehensive idea of just what Mr. Holt's plans were from his address at our July meeting, but in several interviews which we have had with Mr. Holt since his plan seems to be that we should purchase our insurance collectively. Mr. Holt seems to be very confident that the board rates of the old line companies can be reduced. He appears to have a very comprehensive and, the committee believes, an entirely feasible plan for bringing the necessary pressure to bear.

He proposes first to make a thorough field investigation of all risks which may desire to lend their support to such a movement. The plan calls for a couple of expert raters to visit our various plants and study the hazard which surrounds them, and then classify these various risks, such as class "A," class "B," etc."

Working in conjunction with a committee empowered to place all of

our insurance cells tryety Mr. He t believes that an impression may be made on the old time companies and that a meterial reduction in rates can be efected. Should the old line companies see for to agnore our request for lower rates. Mr. Holt claims that he can place the entire line with good, responsible outside companies, making a distribution that will be entirely safe and satisfactory, at rates materially less than the old line stock company rates. Mr. Holt thinks that the expense of placing the insurance in this manner may be about one per cent of the premiums per d.

The plan of forming an inter-association of our own, composed of members of our association only, your committee hardly believes feasible. We question wery seriously whether we can interest enough of our members in such a movement to make it practical. Such a movement must have a large support to make a reasonadly sate distribution of the risk

We do not see any conflict between Mr. Holt's plan and the preposed National interms unneconganization which as members of the National association we desire to meaning

When the National association has formed its interinsurance department and we wish to avail ourselves of the henefits of that plan, we can cancel enough of our insurance to turn over to the National movement as much as it may be willing to accept

The grading committee recommended the manufacture of hard wood hearts of beech, birch, elm and maple into ties, believing there was a more profitable market for them in that form,

The following standard sizes of lumber were recommended by the committee:

PHOT SHITE ROSGIE

Lengths 4, 6, 8, 9, 49, 12, 14, 16, 18, 22 and 24 to t Widths 4, 6, 8, 40 and 12 inch, 75, inches thick

BOALDS, ROUGH is 4, 6, 8, 10, 12, 14, 16 and 18 and 20 feet

[kengths] 4, 6, 8, 10, 12, 14, 16 and 18 and 20 feet.
Widths: 4, 6, 8, 10 and 12 inches, 5, 16 inches thick.

Delissip Lember

Piece Stuff, S1S1F

 $13_{1} \times 5_{-1}^{+}, \ 13_{4} \times 5_{-2}^{+}, \ 13_{4} \times 7_{-3}^{+}, \ 13_{4} \times 9_{-3}^{+}, \ 13_{4} \times 115_{4},$

Boards 818, 13 16 inch thick.

Flooring, ceiling, shiplap, drop siding. Widths = \(\frac{1}{2} \) \(\frac{1} \) \(\frac{1}{2} \) \(\frac{1}{2} \) \

Standard thickness 13/16 inch.

Kiln-Dried Hardwoods

If you were operating a planing mill, small furniture factory or doing any other work that required at times the use of thoroughly kiln-dried hardwood, and should find yourself wanting some of this thoroughly dried stock, would you know where to turn to get it or have any idea where to look for it?

This question was brought to mind quite recently by a man who was contemplating making a feature of kiln-dried hardwoods for market. He had not thought of it as an entirely new enterprise, but owing to a certain circumstance he found himself with surplus kiln capacity and was making a study of the possibilities of handling hardwood and making a feature of offering kiln-dried stock.

Did you ever search through the advertisements of a lumber paper with this idea in mind? If you did you have realized that it is seldom met with. Kiln-dried stock is a fairly common phrase in vellow pine because the larger mills make a strong feature of kiln-drying. Hardwood mills, on the other hand, fight shy of the dry kiln and leave their customers to do the kiln-drying, confining themselves largely to air drving. You can find dry stock-airdried stock-advertised, and now and then kiln-dried hardwoods, but the instances are few. A thorough search through the current numbers of two lumber papers, one of which was Hardwood Record, brought to light two instances of kiln-dried hardwood being featured in the advertising. There is another incidental mention of kilndried hardwood flooring, but in the issue of the RECORD examined there was only one instance among all the advertised hardwood where kiln-dried stock was featured in the advertising. Perhaps there are more mills and yards prepared to furnish kiln-dried stock, but only one instance of advertising this fact was found.

All this brings with it the other question of how much of a market could be found or how great an advantage gained through the handling of thoroughly kiln-dried hardwood. There are undoubtedly many of the smaller users of hardwood who are not well equipped with dry kilns and would appreciate a convenient source of supply where they could get thoroughly kiln-dried stock for their work.

A specific instance of this kind comes to mind now of a planing millman who had a small dry-kiln equipment which he used to more thoroughly dry quite a lot of his finish, including both pine and hardwood. He found, however, that he couldn't successfully dry quartered oak in this kiln, and at times he was seriously worried over this matter. He had even gone so far in an instance as to refuse to bid on some job of millwork specifying quartered oak because he was not in a position to do the thorough drying necessary to make the job as good as it should be. There had been some trouble with work in which the oak was not thoroughly dry when put up and it was found after experiments that it was impractical to thoroughly dry quartered oak with his equipment. He was

confronted with the proposition of either finding some place where he could buy thoroughly kiln-dried quartered oak as he needed it or passing up jobs involving this kind of material.

There are perhaps many other planing millnen in just the same position and it is likely that among the smaller users of hardwoods there are times when it would be decidedly advantageous to the user to buy his hardwoods already kiln-dried.

The question is whether or not there are enough of these to justify more featuring of kiln-dried stock. It is an interesting question which would perhaps bring varying answers to the minds of different people. It may set some men with hardwood vards to thinking and figuring over the possibilities of making a feature of kiln-drying as well as assembling and making up mixed cars. It may set some millmen to figuring on the advantages that might accrue from putting in a dry-kiln equipment and preparing to furnish their customers with kiln-dried stock. Anyway, it is an interesting question that the hardwood trade may well give consideration to, and it is a fairly safe gamble that we will see more of it in the future, more featuring of kiln-dried stock in the hardwoods. Surely there is a chance for those who are prepared to furnish it to gain a little in the way of special trade by featuring this in their advertising, since it need not cost any more than to feature band-sawed stock or use any other feature lines in the advertising space.

Logging in Memphis Territory

The movement of logs to Memphis during the past fortnight has been on a somewhat smaller scale. The amount of logs along the right of way of the railroad is reported comparatively small and this is the explanation for the decreased receipts. The low stage of the river has also been a factor, the arrivals by water having been comparatively small. It is noteworthy, however, that weather conditions throughout this territory during the past ten days have been much more favorable for logging operations, with the result that the outlook is considered better for an adequate supply of logs for the winter. It is recognized, however, that weather conditions will play an important part in determining whether or not there will be enough timber prepared before the advent of real winter weather to meet the requirements of mills at Memphis and elsewhere in this territory.

Comparatively little is heard regarding the shortage of ears. There are some complaints from non-competitive points in Mississippi, Arkansas and Tennessee where it is impossible to get enough empties and where the railroads are slow in moving ears after they have been loaded. As a general proposition, however, it may be noted that the situation is far better than usual in respect to the number of empties available and the promptness with which these are moved after they are loaded.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the Inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 593-When Is Kiln-Dried Lumber Dry?

The writer of the above letter has been referred to the "Mail Bag" article, "B 581," on page 36 in issue Hardwood Record, October 25, for complete answer to his inquiry. Editor.

B 594—Seeks List Hickory Handle Manufacturers

Meraiian, Miss., Oct. 25. Editor II apwoon Recome. Will you kindly send us a list of hickory handle manuracturers and very much oblige?

The above correspondent has been supplied with a list of backery

handle manufacturers. Editor. B 595—Wants 5/8 Quartered Sycamore

Philladelphia, Pa. Oct. 24. Editor Hydrowood Riccone. We have a depand for 100,000 rect of 5.8 quartered sycamore, log tun. Can you give us the name of anyone Bledy to have this stock?

give us the name of anyone likely to have this stock?

LUMBLE COMPANY.

The writer of the above letter has been advised that it is doubtful

The writer of the above letter has been advised that it is doubtful if this quantity of % quartered sycamore is in stock anywhere in the United States. He has been supplied with a brief list of producers of this wood. Any others interested in the inquiry can have the address on application.—Editors.

B 596-Seeks Oak Dimension

Meridian, Miss., Oct. 30. Editor Hanowood Recond: We are in the market for several cars of 4 to 7 melocs wide, 5 feet 6 inches long, and 1x2\frac{3}{4}, 19\frac{1}{2} feet long, one face clear white oak dimension. Can you advise where we can purchase it?

LUMBER COMPANA.

We have supplied the above inquirer with a list of oak dimension producers. Any others interested in the inquiry can have the address on application.—Editor.

B 597-Wants Market for 2-Inch Black Walnut

Omaha, Neb., Nov. 1. Editor Hanowood Riccone: If possible, please advise us names of concerns who buy 2" black walnut. Thanking you in advance for any information you can give us along this line, we are.

Any concerns interested in 2" black walnut can have the name of this company upon application.—Editor.

B 598-Wants Market for 1x10-Inch and Up Prime Plain White Oak

Cincinnati, O., Oct. 31.—Editor Hardwood Record: We manufacture considerable 1"x10" and up prime plain white oak, and are writing you to see if you can put us in touch with buyers of this stock.

Anyone interested in buying material as above offered, can have the address on application.—Editor.

B 599-Two Corrections

A recent issue of Hardwood Record contained notices of the incorporation of the below mentioned concerns. These concerns have discovered errors in statements made, according to the following letters:

Pisgah Forest, N. C., Oct. 27. Editor Hardwood Record: In your Issue of Oct. 10, page 39, you had a notice of the incorporation of the Carr Lumber Company, stating that same is incorporated at \$25,000 authorized, of which \$2,500 has been subscribed. This company is incorporated at \$250,000, all of which has been subscribed for, and we will very much appreciate it if you will make this correction in an early issue of your paper.

CARR LEMBER COMPANY.

Per Louis Carr.

Hendersonville, N. C., Oct. 29.—Editor Hardwood Record: In a recent number of your paper just received by us, we notice a mention of the

incorporation of the J. R. Willson Lumber Comp. to. We notice that you have made an error in naming the incorporators W beg to advise that the officers are as follows: F. E. Willson, Phys-Pa., president; Alexander Willson, Pittsburgh, Pa., vice president at a Willson, Hendersonville, N. C., secretary and treasurer and gener nager. Capital stock, 825,000. Place of business, Hendersonville, $N_{\rm e}$ (Handles a genetal aims of builders' supplies and does a whelevil il and planing mill business. Kindly note the correction, "Willson" is Hed with two J. R. Withson, L., MPANY. By J. R. Willson, secretary treasure

B600-Wants Oak Rim Strips

Woodstock, Out. Nev. 6. Editor Hamwood Reco. dly let us know If you can give us the names and addresses of responsible parties who get out white and red ook run steps. We are a arket for 75,000 good strips.

The writer of this letter has been supplied with a shell list of manufacturers of the goods it seeks. Others can have the e and address on application to HARDWOOD RECORD.—EDITOR.

Clubs and Associations

Fall Meeting of North Carolina Forestry Association

The regular fall meeting of the North Carolina Forestry Association was held in the Chamber of Commerce rooms in Raleign at 10:30a, Sept. 30. Although the attendance was not large, several important matters were transacted. The question of appointing delegates to the National Conservation Congress in Washington was taken up and delegates selected. Great care was exercised in selecting delegates who would attend, and a full representation of the association at the congress is confidently expected.

A resolution was adopted requesting the council of state to plant so far as is consistent with the scenic effect and with the plans of the council, a full collection of native North Carolina trees on the capitol grounds and the grounds of the governor's mansion. This matter has since been brought to the attention of the council of state and it has expressed its williangness to accede to the request of the association

It was unanimously decided that the next annual convention of the association to held in some central town in the western part of the state. Heretofore, all meetings have been held in Raleigh and, for this reason, many of the western people, who are or should be interested, have been unable to attend. It was also decided that in connection with the meeting some side trip or other form of entertainment be arranged. It is probable that the next meeting will be held in Asheville, toward the end of March or early in April. It is hoped that a side trip through the white pine plantations of the Biltmore Estate or through the conservative logging operations of the Carr Lumber Company on Fiscal Forest, may be arranged.

One of the principal objects of the meeting was to urge upon the legislature the importance of extending the stock law all over the state The association has always stood firmly for the elimination of the open range conditions and has steadily advocated a state-wide stock law, a large proportion of those in attendance were directly interested in the stock law measures being considered by the special session of the legislature, an early adjournment was taken to permit the members to appear before the special legislative committee in charge of these bills. Largely as a result of this campaign, headed by the indefatigable enthusiast, B. F. Keith of Wilmington, and strongly supported by the agents of the United States Department of Agriculture, in charge of tick eradication work in this state, the legislature just adjourned has enacted a series of local bills extending the stock law over four more whole counties and parts of six others, and providing for elections on the stock law question in at least five additional counties. This is most encouraging; and if the present campaign can be kept up cand we intend to keep it up) Mr. Keith believes that within four years the whole state will be under this law.

Big Gathering Planned at Memphis

The Lumbermen's Club of Memphis is again to play the role of host to at least two lumber organizations, and possibly three, at a date to be arranged in the near future. It was definitely decided at the meeting of the club Nov. I that invitations would be extended to the Lumbermen's Club of Louisville and the Nashville Lumbermen's Club to attend the annual banquet of the local organization, and if the date can be so prranged as to include the new red gum association, which is to be formally launched here Saturday, Nov. 15, this function will be held on the evening of the latter date.

The entire arrangements, including the extending of the invitations, the fixing of the date and the character of the entertainment to be accorded, have been placed in the hands of the entertainment committee, of which F. E. Stonebraker is chairman. This committee has been given carte blanche and has been assured that there will be plenty of money forthcoming to take care of any expense incurred, with the result that the members of the club and the visiting lumbermen may expect something

far out of a ordinary. The Landermeu's Club of Memphas has a mation wide of eed even an international, reputation as a host and those who know the personnel of the entertainment committee feel sure that this reputation will be enhanced rather than diminished by the features arranged for this occasion.

The Lumi rmen's Club of Memphis did not have an annual banquet during the ; ast year and after it was decided to extend the invitations already retired to, it was deemed best that this function should be made the use of the enterteinment features. The members of the club who attend this banquet will pay for their own plates, but an outside fund is being arranged to take care of all other expenses in connection with this function and the raising of the money in question is in such good hands that there is no doubt that there will be plenty of funds forthcoming. There will be plenty of good things to cat and drink and there will likewise probably be either a cabaret show or a theatrical performance to add to the gajety of the occasion. The exact date has not been sixed and it cannot be definitely settled until the committee has heard from the clubs at Nashville and Louisville with reference to whether or not Nov. 15 will suit. It is hoped by lumbermen here that that date can be arranged in order that the new gum organization, to be formally launched that day, may be started off under the most auspiclous circumstances possible. If Nov. 15 can be used it is expected that there will be from 300 to 400 lumbermen here and that lumber history along certain lines will be written in red letters.

The meeting on Nov. 1 was attended by about eighty members and was one of the most enthusiastic held thus far this season. Very little business was transacted, aside from the foregoing, but the members were in a happy frame of mind and entered heartily into the spirit of the occasion.

The river and rail committee reported that it was continuing the work assigned to it by the club, while the membership committee reported one new applicant. Three new members were elected, as follows: Associate—Eugene Woods, Woods Lumber Company, Millington, Tenn: active—C. R. Tustin, local manager of the T. B. Stone Lumber Company, Cincinnati, and G. E. Beckendorf, who has charge of the local interests of the Long-Knight Lumber Company, Indianapolis.

The club took no definite action regarding representation at the forthcoming National Conservation Congress to be held at Washington, Nov. 18-20.

Definite Plans for Gum Association

Lumber interests at Memphis are looking forward with much pleasure to the adjourned meeting of the red gum conference which is to be held Nov. 15 at the Hotel Gayoso. It was practically decided at the meeting held here Oct. 18 that a permanent red gum association would be formed and a committee was appointed to draft a constitution and by-laws, agree upon a name for the organization and fix the date and place for the holding of its meetings. This committee held an important meeting following the adjournment of the conference and a number of the members of this committee met in St. Louis Saturday, Nov. 1, to further discuss the work assigned to them. It is anticipated that this committee will have its report ready to submit Nov. 15 and that the new organization will be formally launched at that time.

It cannot be stated that the conference has had any perceptible effect so far on the market for red gum. It is noteworthy, however, that the discovery that there was only a moderate amount of red gum on sticks has had a wholesome influence on holders, making them rather firmer in their views. The conference has meant a great deal to Memphis because of the widespread interest here in the welfare of red gum and it has been a subject of much discussion among lumbermen as well as in other business circles. The Business Men's Club has asked to be allowed to assist in boosting red gum in every way possible and it is probable that this organization will be given an opportunity to do so. It is suggested that a publicity campaign will be waged in the near future, in order that the market for red gum may be broadened, and in this event particular attention will be paid to the foreign situation. It is felt that there is a wide field for the use of red gum among foreign consumers of southern hardwoods and some of the red gum manufacturers believe that publicity work in this quarter will result in splendid returns.

The committee appointed at the last red gum conference to secure the names of all the manufacturers of gum in the country has been quite busy. A letter has been sent out to all the manufacturers whose names have been obtainable but, for fear that some might have been missed, M. B. Cooper, chairman of this committee, has asked that a copy of the letter mailed to manufacturers be published in Hardwood Record so that every manufacturer might have an invitation to attend the meeting Nov. 15 and participate therein. The letters follows:

Are you a red gum manufacturer? If so, come to Memphis on Nov. 15 and absorb some of the "get together" spirit that has pervaded the ranks of the gum manufacturers as the outcome of our preliminary meeting Oct. 18, where an annual production of 220,000,000 feet was represented.

Our next meeting is called for the purpose of perfecting a permanent organization and we need your support.

You may not realize now what an organization of this kind can do for you, but you do know that the big slump in gum prices is unwarranted as compared with the market on other woods, and that something should be done.

We know what organization has done for other woods, and the same

can be done for gum, but not unless we receive the hearty co-operation of every producer, whether large or small.

If you have a neighbor producing gam, we appoint you a committee of one to personally havite him to attend this meeting, for the more representative our organization the more quickly and surely will we get results. The meeting is called for Nov. 15, 10 a.m., at Hotel Gayoso, Memphis,

The meeting is called for Nov. 15, 10 a. m., at Hotel Gayoso, Memphis, Tenn., and the committee will appreciate a note from you advising that you will be present.

Please bring to this meeting for statistical purposes a careful statement of your gum production for twelve months ending Oct. 31, 1913, Please keep the red and sap production separate, as well as the amounts used for your own consumption in the way of box shooks, etc.

Philadelphia Golfers Active

The Philadelphia Lumbermen's Golf Club, through the courtesy of Joseph P. Comegys, played its game for October on the links of the Springhaven Country Club. After several days of unpropitious wenther, the day broke clear and cold for the season, but with oxygen filled lungs the golfers entered into the game with keen vigor. There was more than the usual interest, as two big prizes, one presented by the New York Lumber Trade Journal, the other by ex-President Frank Buck, were to be awarded. The game was divided into seven foursomes and was played on a course which was in excellent condition. The regular monthly prizes fell as follows: F. A. Benson and John H. Schofeld tied for first and second prizes, each having a score of 83 net. A toss-up gave the first prize, a pair of golf shoes, to Mr. Benson; the second, a set of golf balls, went to Mr. Schofield. Ell B. Hallowell and William P. Shearer tied for third prize with a net score of 84. Mr. Shearer, by a toss-up, won a pair of golf gloves.

At 6:30 a sumptious dinner was served, after which the regular bustness meeting was in order. In the absence of both the president and vice-president. Frank Buck, ex-president of the club, presided the exception of a vote of thanks to Joseph P. Comegys and the Springhaven Country Club nothing of special interest came up Ren C Currie of Currie & Campbell, last year's secretary of the club and recently elected treasurer, having made the best net score of the season was awarded the Buck prize, a superb 400-day hall clock, six feet in height. and having made the greatest number of points of the season, he also won the New York Lumber Trade Journal prize, a handsomely designed silver cup, standing eighteen inches high. Mr. Curric was overwhelmed that his friends should have been so munificent, but there was a general rejoicing at his deservedly good fortune, as the popular Ben has from the beginning taken a profound interest in the club and been indefatigable in his efforts to promote its success. He was called upon for a speech, but for once the fluent Ben was speechless, his heart was far too full for utterance; all he was equal to was: "Boys, what will you have?"-and they had. It is needless to say the closing scene was one of high good cheer and merriment supreme. It was decided at this meeting to have one more game in November and it was left to the executive committee to decide as to the grounds. F. A. Benson has offered those of the Philadelphia Athletic Club.

Enlisting Architects in Behalf of Lumber

A world-wide movement to induce architects to give lumber the preference in their specifications was the object of the largest banquet the Lumbermen's Club of St. Louis ever held. It was given at the Mercantile Club Tuesday evening, Oct. 28. There were approximately 180 guests and members present.

The club had as its guests, on this occasion, over seventy prominent architects from St. Louis, Kansas City and other cities, and they were shown the advantages in the use of lumber over substitutes.

The movement was suggested by Julius Seidel, one of the largest retail lumbermen in the city. The movement was discussed with the members of the club, and it was decided to have an architects' night. It was planned to have them addressed by leading lumber manufacturers who would show certain things as to the supply, cost, durability, adaptability and other advantages in regard to lumber.

Capt. J. B. White and R. A. Long, both well-known lumber manufacturers from Kansas City, were the speakers from the viewpoint of manufacturers and Julius Seidel of St. Louis from that of the retailer.

Following the banquet President Thos. C. Whitmarsh, after a short preliminary in which he said there would be no business transacted, said the club was specially honored by having such well-known and prominent lumbermen as Capt. White and Mr. Long present. He stated that the architects were the ones the club wanted to talk to about lumber products. They did the planning of buildings. He wished to assure them that the supply of lumber was not exhausted and that prices were not too high. He urged the yellow pine people to advertise in the newspapers in order to offset the publicity given to substitutes for lumber.

Capt. White then said that there was no cause to be alarmed over the lumber situation. He declared that there was one-half as much lumber in the United States today as there was 100 years ago. With reforesting the lumber supply would never give out in this country. He stated in the course of his remarks that there was no substitute for lumber, that the architects should help mould public sentiment to know the various uses of the various woods, that they should educate the user not to search for substitute, but to use the best wood for the purposes required, that the great talk of the increasing cost of lumber was a story started and maintained by the substitute competitor.

Mr. Long next addressed the meeting, the substance of his remarks being that the local architects should give lumber the preference in their specifications.

Mr. Seldel was the last speaker. He argued that there was a bountiful supply of lumber and said that it should be used more discriminately than in the past if this country wishes to continue to prosper. He urged architects not to draff their plans so as to require the mill to cut the lumber of other than regular stock dimensions.

Exposition Plans Progress

At the headquarters of the Forest Products Exposition in Chicago reports are being received from all sections of the country, including important Canadian points, indicating the liveliest interest in and general support of the big undertaking. The prospectus, containing floor plans of the Coliseum at Chicago and Grand Central Palace, New York, and rules and regulations governing the exhibition, are being distributed, also posters for display in the offices and plants of every branch of the wood industry and sticker-seals for application to mail correspondence. In the "foreword" of the prospectus is the significant statement: "The assurance is conveyed that the rules and regulations have been prepared with the welfare of the greatest number of exhibitors and the ultimate purpose of the exposition in mind," evidently with the purpose of anticipating any individual objections to seemingly arbitrary restrictions or reservation of executive authority. To those familiar with the preparation and conduct of industrial expositions and general displays, this is a wise plan and provides a chart for the avoidance of future complications,

Manager George 8. Wood is authority for the statement that the subsidiary organizations forming the National Lumber Manufacturers' Association are proceeding enthusiastically and in careful deliberation with plans for their respective and joint displays, and many organizations and individual concerns are making preparations for more or less elaborate individual displays. This applies to the affiliated products and by-products of the industry. Secretary J. E. Rhodes, of the National Lumber Manufacturers' Association and the Forest Products Exposition Company recently returned from a trip through the Southeast and reported activity among the lumber and manufacturing interests in that section in preparing for the exposition.

Emphasis is being laid on the essential value and importance of an active display with actual demonstration as the keynote of the exposition. This argument is based on the effective and lasting impression of showing not only the basic material and its various forms and developments, but the methods employed in production, describing eloquently the story of the wood industry from start to finish in efficiency, possibilities and nermanency.

"The Forest Products Exposition is essentially the clearing house and shop window of the wood industry in all its phases and possibilities," said Manager Wood, "and in such relationship has no connection with or cognizance of any trade differences, controversies or complications. There is no politics, factional distinction, individual interest or special division to be considered. Entire freedom of action has been given the management with this policy fully authorized and endorsed, and any assumption to the contrary or indicated expression of the management or any controversial phase of the industry is unmerited."

Southern Traffic Bureau Active in Rate Matters

The Southern Hardwood Traffic Bureau, through a special committee, has adopted resolutions protesting against the horizontal advance of five per cent in general freight rates, as proposed by the railroads operating north of the Ohio river. This action has been taken in order that the railroads may have formal notice of the attitude of this organization, which, directly and indirectly, handles more hardwood lumber and hardwood lumber products than any organization of its kind in the countryabout 80,000 cars a year. A thorough examination into the reasons for the advance and the necessity therefor will be made by the bureau and, if it cannot be shown that the advance is justified, the railroads will encounter the active opposition of this organization in this effort to realize the \$42,000,000 increase in revenue represented. The committee, through which the resolutions were drawn, is composed of the following wellknown lumbermen of Memphis: George D. Burgess, chairman of the bureau, chairman; James E. Stark of James E. Stark & Co., J. W. Mc-Clure of the Belgrade Lumber Company, C. D. Hendrickson of the C. D. Hendrickson Lumber Company, and S. M. Nickey of the Green River Lumber Company.

The railroads have already filed notice with the Interstate Commerce Commission regarding this proposed increase and the Southern Hardwood Traffic Bureau has adopted these resolutions in order that both the carriers and the commission may be apprised of its attitude. It is believed by the bureau that the other roads of the country are planning to follow the lead of those north of the Ohio and the question is therefore one of vital interest to every man engaged in the hardwood trade. The resolutions are quite similar to those recently adopted by the Lumbermen's Club of Memphis.

The adoption of these resolutions marks the beginning of one of the greatest traffic battles ever staged in this country. The lumbermen are willing that advances should be made if they are regarded as absolutely necessary, but they are unalterably opposed to any advance of five per cent without regard to the merits of the controversy as affecting their particular interests. It is estimated that such an advance would cost the members of the bureau approximately \$500,000 additional in

freight alone, and J. H. Townshend, general manager of this organization, has already began collecting data to be used in precenting unnecessary or unjustinable advances in lumber rates in connection with this general raise in freight cost. He is backed by the entire membership of the organization, as well as by the Lumbermen's Club of Memphis, and, when the case comes to a hearing at Washington, there will be the largest attendance of hardwood lumber ever witnessed from the South.

The Southern Hardwood Traffle Bureau, in behalf of the Anderson-Tully Company of Memphis, has filed a petition with the Interstate Commerce Commission through which a lower rate is sought on box shooks and other products from Vicksburg, Miss., to certain points in Texas. It is differed against the Vicksburg, Shreeport & Pacific and other roads and the reduction sought amounts to about five cents per hundred pounds. There are alleged irregularities and discriminations which are sought to be removed.

The bureau is also seeking, through J. R. Walker, counsel for this organization at Washington, an amendment to the recent decision of the Interstate Commerce Commission covering rates on shipments of cutton-wood and gum from the main line of the Southern Railway in Mississippi. It would seem that the railroads are taking advantage of technicalities and that, while they are willing to base their shipments southfrom the main line of the Southern Railway, they are basing northbound shipments from the extremities of branch lines instead of from the main line.

The bureau is waging an active campaign for new members with a view to bringing the membership to 100. Two new firms have identified themselves therewith, as follows: The John Dulweber Company, Cincinnati, with mill at Morehead, Miss., and the Ward Lumber Company, Chicago, with mill at Sunflower, Miss.

Conservation Congress Membership

For the first time in the history of the National Conservation Congress opportunity is offered to associations and individuals to become members of the organization. Heretofore the congress has been a purely delegate body. The importance of its work, however, has made it necessary to establish a regular membership. Many applications for membership heretofore could not be granted because no provision had been made for it, but that has now been done. It is expected that a large working memership will be enrolled when the congress assembles in Washington, Nov. 18-20. Individual membership is one dollar a year, life membership \$25, supporting membership \$100.

Chicago Club Endorses Building Project

Wednesday evening. Nov. 5, the members of the Lumbermen's Club of Chicago gathered at the club rooms for a business meeting and social function. The meeting was called especially for consideration of the proposed lumbermen's building, and the matter before the club was the consideration of whether or not it was wise for the club to move from its present quarters into the proposed quarters in a building to be erected by the McCormick estate. After discussion the question was put to the membership and it was practically unanimously voted that the members of the club were in favor of moving to the new quarters when they are completed. This meeting was in accordance with provisions of the bylaws which state that any such project shall be placed before the club membership for its approval before being referred to the board of trustees. This favorable vote will mean that the matter is referred back to the board, which will have authority to act.

The plan is to devote the entire third floor of the proposed building at the corner of La Salle and Madison streets to the Lumbermen's Club and Lumbermen's Association. This would mean that the club would occupy about 7,000 square feet of space, an increase of half over the present space. The dining room would be enlarged and the owner of the building would install a grill room, which would be conveniently arranged for dumb waiter connection with the restaurant. The club quarters would be crived from location in the Lumbermen's Exchange building would undoubtedly be very great as a majority of the local trade would have their offices located in that building.

The only obstacle in the way has been the matter of expense. The present club expenses for maintenance amount to about \$11,800 annually. Of this \$7,000 is for rent. The present income is almost equal to expenditures and is derived mainly from dues of two hundred resident members and one hundred and twenty-five non-resident members. is believed that the necessary amount of space can be rented for \$7,000, although additional expenses will be incurred in fanitor services, light, interior walls, etc. It is figured that the fixed increase in expense will be \$2,800. It is hoped to meet this increase through an increase in the membership of the club. The proposed arrangement would unquestionably not only increase the membership but would mean greater interest in the club itself and greater patronage of the club dining room. The club in the new quarters would unquestionably be more attractive to out-of-town members, as they could there meet practically all of the local trade, or at least be in closer touch with them on account of being in the same building.

With the favorable action taken by the club, the success of the building project is practically assured. George J. Pope, chairman of the building committee, states that the McCormick estate has granted to that committee additional time in which to secure the necessary amount of floor rental. It requires now only a few thousand feet more floor

sport that a prefect a cultainty. Mt. Pop made the interesting observation that fundermon would be seening practically the entire sensition an investment of about \$2,250,000. The states that the real estate value represented is approximately \$1,000,000, while the cost of the building will be \$1,250,000. Lumbermen will have practically the entire beheat of this total investment as there will be no restrictions or disadvantages which they would not feel had they dinneed the entire project themselves. In addition they will be relieved of all such financial troubles and will not be bothered with bond issues or anything of the sort. Thus it can be seen that the project, if carried through, would be immensely to the advantage of the Chicago lumber trade. Those who have not already taken space should surely get into communication with some member of the building committee as quickly as possible in order that they may secure satisfactory location in the building.

The business no ting of the club was followed by an enjoyable stag affair, which was fairly well attended. It was carried off with the usual snap for which these functions, gotten up by the entertainment committee of the club, are noted. The entertainment was of a vandeville nature. It was the first of the November functions listed, the next to be ladies' night, being an evening of 500 for members and guests, this will take place on November 12. On November 19 there will be an informal dance for members and guests, while November 26 will be the date of men's night, when anction bridge will be indulged in. Members will be allowed to bring guests to that affair also

THE THE CONTRACTOR OF THE PROPERTY OF THE PROPERTY STATES

With the Trade

To Build Mill at Dyersburg, Tenn.

The Proc Rold Lumber Company has purchased a tract of land in Dyersburg, Tenn., which will be used as a site for a big band mill. The machinery has already been ordered and the construction of the necessary buildings is under way. This firm, which has been only recently organized, will make a specialty of hardwood lumber. Grant 8, Price, who recently lost a mill by fire at Norwalk, O., is the ruling spirit in the new company. He decided that it would be more advantageous to rebuild the mill at Dyersburg than at the old location. Although special attention will be given to hardwood lumber a planing mill will be operated and building material of various kinds will be prepared for the market. The plant is to be one of the largest of the kind in that part of the country.

Starts Business at Memphis

The H. D. Allen Lumber Company is the latest addition to the hardwood lumber industry of Memphis. It is headed by H. D. Allen, who was until recently manager of the southern office of the Greble-Sine Lumber Company. He took charge of the Memphis business of this firm when Mr. Greble went to Chicago to look after the northern end, following the death of Mr. Sine. The new firm will handle lumber at wholesale and is identified with the Allen-Newman Lumber Company, which is operating a mill at Pinkney, Ark, but which has its offices in Memphis. Although Mr. Allen is quite a young man he has had a wide and thorough experience in the hardwood business, having been successively employed by the Three States Lumber Company, the Paepcke Leicht Lumber Company, the Ford & Johnson Chair Company, the W. D. Reeves Lumber Company and the Greble-Sine Lumber Company.

Michigan Concern Will Cut Out

The operations of the R. G. Peters Salt & Lumber Company at Eastlake, Mich., will be completed the present season and the company will close its plant at Eastlake. The timber resources of this concern are exhausted, and with the cutting of the last log the mill will shut down and operations of the salt block will be suspended.

The company is under the receivership of the Michigan Trust Company of Grand Rapids and under the direction of the United States court. Under other circumstances the company might continue the purchase of timberlands tributary to its operations, but this is not likely with the receivership in effect.

The R. G. Peters Salt & Lumber Company is one of the best known concerns in western Michigan. The business was founded by R. G. Peters, who began operations in a small way at Manistee forty years ago. He put all his resources into buying lands and his titles extended from Manistee to Cadillac and beyond. The entire tract has been stripped of its forest and so at the close of the present season there will be nothing left for the mill to cut.

Death of Isaac Stephenson, Jr.

Isaac Stephenson, Jr., a nephew of Senator Isaac Stephenson, and son of Robert Stephenson, was found dead in his berth on a Chicago & Northwestern railroad train arriving at Milwaukee, Wis. on Oct. 28, en route to Chicago. The death was supposed to be directly due to heart failure.

Mr. Stephenson had been manager of the Ludington-Van Schaack & Wells Company of Louisiana for about fifteen years. He erected and had in entire charge the mill and operations of that company from the time of its inception up to its sale to the Long-Bell Lumber Company last year. Mr. Stephenson's health had not been good for some little

time. For this reas is how as led to retire from active work. After disposing of the property he returned to his old home in Menominee, Mich, where he lived with a married daughter.

Mr. Stephenson was well liked for his many pleasing qualities. He was fifty-four years old.

New Band Mill Warren Ross Lumber Company

The new band until of the Warren Ross Lumber Company at Jamestown, N. Y., is reported to be about completed. This concern does an extensive business in hardwoods and the mill now being erected will be for the purpose of sawing cherry and maliogany, of which this concern has made a specialty for a number of years. The manufacture of American hardwoods is a consideration that may come up at some future date, but is not in mind at present.

To Manufacture All Kinds of Hardwood Flooring

J. C. Altrey of Crawtordsville, Ind., announces that the hardwood flooring business which he started about three months ago has been progressing nicely. Wr. Alfrey says that he has been merely filling the demand on the part of the local trade, but that he is now making extensive arrangements whereby he will increase the capacity of his plant about four times over the present capacity, and will then be in a position to slip straight or mixed cars of hardwood flooring in oak, maple and beech of various kinds and grades on the general market.

Mr. Alfrey and his father have been directly connected with the lumber and flooting terms is for a great many years in Indiana, and theirproduct should find a ready safe.

Meeting National Lumber Manufacturers' Credit Corporation

The annual meeting of the National Lamber Manufacturers' Credit Corporation was held at the offices of the corporation at Norfolk, Va., recently. The National Lumber Manufacturers' Association, which is the only stockholder, was represented by C. J. Millard, W. P. Roper, E. R. Baird and Secretary J. E. Rhodes. R. H. Jownman of New Orleans was elected president of the corporation. The directors were also elected.

It was decided to hold the next annual meeting of the stockholders at the offices of the company at Norfolk, the first Wednesday of June and that thereafter the regular annual meetings shall be held on that day each year. Regular members of the executive committee were also elected, and in addition to R. H. Downman as president the following officers were elected: W. E. DeLaney, Cincinnati, vice-president; J. A. Freeman, Pasadena, Cal., treasurer, and J. E. Rhodes, Chicago, secretary,

Peytona Lumber Company Building New Mill

The new mill of the Peytona Lumber Company, Huntington, W. Va., is soon to be epened at Geoville, Logan county, W. Va. The mill will be equipped with an eight foot band saw and will manufacture bardwoods entirely. Occoville is ninety miles from Huntington on the Chesapeake & Ohio railroad. The output of the new mill will be marketed from the Huntington office.

Fire Bacon-Underwood Veneer Plant

The veneer plant of the Racon-Underwood Veneer Company at Mobile, Ala., was partially destroyed by fire on Oct. 14, with the resulting loss of between \$35,000 and \$40,000. The fire consumed the office buildings, dry-kiths and lumber stocks.

Change of Headquarters

The Mansfield Hardwood Lumber Company of Shreveport, La., announces that beginning with Nov. 1, its general offices have been at Winnfield, La. The Shreveport quarters have been maintained for the last three years and were established there after the concern moved from Mansfield, where a hardwood mill is located. The company has maintained a hardwood mill at Winnfield for the past three years and plans to erect another mill at that point. Hence this change of headquarters.

To Start Business at Ashland, O.

Harry Vanosdell, Henry Vanosdell and Fred Edwards and W. D. Hanville recently purchased the lumber yard formerly occupied by C. S. Garetson at Ashland, O. These three men have incorporated a concern to be known as the H. V. & E. Company, which will make a specialty of hardwood for manufacturing purposes,

Harvester's Suit Nears Close

The suit for the dissolution of the International Harvester Company seems to be nearing an end. Opposing counsel appeared at the United States district court at St. Paul on Nov. 3, for the final struggle in the government suit to dissolve the company as a monopoly in violation of the Sherman anti-trust law. Both the government and the Harvester company had on hand formidable arrays of counsel.

Edward P. Grosvenor, special assistant to Attorney-General Reynolds, in opening the final arguments asked for dissolution in such manner as to prevent effectively a possibility of two or more of the disintegrated parts coming into ownership of two companies having common stock-holders. He pointed out that under the "rule of reason" the Supreme court has held other companies unlawful that smother competition and monopolize trade,

Attorney E. A. Bancroft of Chicago, in speaking for the Harvester company, said that there was no proof sustaining six of the seven charges contained in the government's brief, and alleged that five of the seven charges had been dropped out of the case and had not been mentioned. Mr. Bancroft said that there are more than 2,000,000 farmers who had bought machines of the Interaction of Harvister temporary II (2) we surrosate in his references to the suit, as a difference of the term, from coverion and monopoly and stated that the farmers I we show doed disposition to consider themse visive, times. He stated that the government has taken the position that it is the slize of a business which the Sherman anti-trust law purs a limit to, and stated that the government really had shown no clean on its centual matter that the government really had shown no clean on its centual matter that the flary star company. He instead that there exists and has existed absolute openimes in the harvesting machine field, and that that field cannot be closed or monoposition.

October "Blue-Book"

The October 1883 of the BC. Poox, paterished by the Nit enal Lumber Manufacturers' Credit Corporation at St. Louis, Mo., has been delivered to its subscribers. The publishers have taken all pains to make the information contained, which covers a classified list with capital and pay ratings of all neurofactures, wholesalers and retail dealers in lumber as well as factories which buy lumber in carlond lots, as accurate as possible.

| Pertinent Information

Appeal in Eastern Retailers' Case

The appeal from the decision of the New York district court in the eastern retailers case was regned before the United States suprome court at Washington on Friday, Oct. 24, and concluded on Monday, Oct. 27. A. B. Cruikshank was heard for the Eastern States Retail Lumber Dealers' Association and Herbert I. Taylor, special counsel for the Philadelphia organization; II, Carroll Todd, was heard for the government.

Wr Cruikshank onened the argument with a history of the case to date and the decision of the district court from which he took the appeal. He showed that the manufacturer, located far from the centers of trade. was not the real product, as the term is used by the consumer, claiming the retailer, with the lumber stored in his yard, is the producer, He explained the position of the retailer and his very presence in any community as essential as the drug store. Taking up the system of issuing official lists, he pointed out that the reporting of names for the list was voluntary and any action of any retailer upon receiving the report was entirely voluntary; that the retailer was at liberty to buy of the scalper or refuse as he saw fit. This point was thoroughly established by the testimony of all the witnesses called who knew anything about the subject. Counsel stated that the New York court erred in holding that any interference with competition was restraint of trade. Counsel argued that applying the rule of reason to this case the defendant associations must be acquitted of any wrongdoing, as all they had done was a reasonable effort at protecting their own business,

Mr. Todd, for the government, claimed that the acts of the defendants really amounted to beyout and were therefore in violation of the Sherman act. He cited the Danbury Hatters' case, where the court held for the first time that a workingmen's strike, where there is a boyout attachment, violates the Sherman law. He stated in substance that he did not pretend to back up the decision of the court that all interference with competition is restraint of trade.

Mr. Taylor followed for the Philadelphia association and pointed out very clearly the difference between a combination to circulate information and one in restraint of trade. He attempted to distinguish the position of Philadelphia from that of the other associations to the advantage of Philadelphia.

The court listened to the arguments with great attention and asked many questions, which was to be expected in view of the great amount of printed evidence and briefs. A full bench was present.

Denmark Reclassifies Gum Imports

The National Lumber Exporters' Association is able to claim the credit for another result whereby the difficulties in the way of shippers of lumber to foreign countries are overcome, this being a successful appeal to Denmark to secure a reclassification of gum. Denmark, along with other European countries, had put gum in the same class with valuable cablinet woods, assessing the higher rates of duty on such woods. The exporters, of course, objected as gum is one of the native woods, and through the National Lumber Exporters' Association officers, the matter was brought to the attention of the Agricultural Department at Washington. The Agricultural Department communicated with the State Department, and the latter, through the American minister to Copenhagen, brought the subject to the notice of the Danish government, with the result that word has just been received of a correction of the classification. Gum going lato Denmark, therefore, will be taxed at a low rate. The letter advising the association of the action taken reads as follows:

Adverting to previous correspondence, and with special reference to your letter of May 14, 1913, concerning the Danish customs classification of the importations of red gum lumber, the department is in receipt of a despatch from the American Legation at Copenhagen stating that a note had been received by the Legation from the foreign office to the effect that the Danish government, after a re-examination of the question of the tariff classification of red gum lumber. has arrived at the conclusion that the lumber in question should be classified with native lumber

and not, as has heretores been the case, with rotagn famous of superior quality, and that the necessary orders have been given in order that red gum, may be subject in the future to the lower fact.

Similar representations made to Vorway recently save also costiled in an abatism of the regulations couplained of by the Authoral Lander Exporters' Association, while in the case of Sweden, the organization was advised that no cariff is imposed upon imports of cancer at all. Some time ago a satisfactory understanding with Russla were rached. The first appeal of the kind was made to Italy some years ago and the outcome was entirely acceptable to the exporters. Why Europe in customs authorities should single out guin for such discrimination is somewart mystifying unless it be assumed that the designation of the wood is satin walnut serves to create the impression in the minds of the customs chirals who

Prospects for Active Logging in Wisconsin

Lumber camps in northern Wiscousin are in need of labor, according to Edward Exmerson or Chippewa Falls, who has returned from a tour of the camps. Every department in the camp has inceased wages this season, sawyers, for example, being paid 845 or an increase of 85. In some cases the camps are running with only and enough non. All the old camps of the various lumber companies are opened and new ones are being creefed. The coming winter will be a bosy one in logging circles. It is expected that the cut in Sawyer county will reach the 120,000,000 mark this year, which is far in excess of the usual cut but swand as compared with the cut fifteen years ago. There will be about seventy-lave camps opened, which will require from 5,000 to 6,000 men. The tunler to be cut is hardwood, bembeck and pine. Among the larger concerns the following are included:

Kaiser Lumber Company of Eau Claire, operating on Thornapole and Flambeau rivers, 25,000,000 feet, to be sawed in the recently acquired old Daniel Shaw Lumber Company's mill at Eau Claire. The New Dells Lumber Company of Eau Claire, operating near Kennedy, 15,000,000 feet, to be shipped to Eau Claire. The Hines Lumber Company, Chicago, operating north and south of both Winter and Draper in the recently purchased Weyerhaeuser holdings, 25,000,000 feet, to be shipped to Park Falls. The Blakedale Lumber Company, Couderay, operating on Conderay Indian reservation, 5,000,000 feet, to be sawed at mills there, The Alpine Lumber Company, Grand Rapids, near Conderay, 10,000,000 feet, to be shipped to its mill at Atlanta. The Frank Carter Company, Menomonie, 6,000,000 feet near mills at Lona Spur, Wirter and Draper, where they will be sawed. Horel & Horel plan to cut 5,000,000 feet near Indian Post on the west fork of the Chippewa river and land at Crooked Rapids for shipment. The Rice Lake Lumber Company, 25,000,000 feet for mills at Rice Lake, will cut on east fork of Chippewa river and on the Flambeau, and the Hammond Chandler Lumber Company will cut 5,000,000 feet at the former place and ship from Winter to the Rice Lake mills.

New Rates on Rough Material in Arkansas

On Thursday, Oct. 30, the Ralfroad Commission of Arkan-as issued an order establishing a new rate on rough material, which is welcomed by the lumber and timber interests. The new rate, which applies to rough lumber, staves, flitches, bolts and logs in car load lots, is made at two cents per hundred pounds for bauls of twenty-five miles or less, and increases one-quarter of a cent for each additional ten miles up to 400 miles, which takes a rate of eleven and one-quarter cents. The order, which becomes effective on Nov. 10, was made after lengthy hearings had been held, at which both the ralfroad representatives and those representing the lumber interests had been heard in full.

The consideration of the rates came up upon application of the rallroads for permission to raise the old rates. At the hearing the shippers argued that the old rates were too high, and should be lowered instead of increased. In view of these facts the lumbermen are very much elated over their victory.

Will Experiment With Fireproof Paint

Tests of alleged fireproof paint will soon be made by Howard F. Weiss, director of the Forest Products Laboratory at Madison, Wisand by Herman Von Schrenck, a well-known St. Louis chemical engineer. This will be done as the result of a conference in Chicago, Oct. 20, between representatives of the Forest Service, National Lumber Manufacturers' Association and the Educational Bureau of the Paint Manufacturers' Association of the United States. If the tests prove satisfactory it is the purpose to patent the paint in order to guarantee its purity. The paint may be applied either with a brush or by dippling.

Forest Fires in North Carolina

Joseph S. Holmes, forester of the North Carolina Geological and Economic Survey, has published a bulletin in which he gives statighted intended to prove that the state loses large sums annually for the want of better methods of combatting fires. The loss last year was about \$1,500,000, and much of it was due to fires which might have been prevented if the people had been properly organized and instructed. This is the situation in many states. The time to attack a forest fire is before it begins. Mr. Holmes is one of the most aggressive and progressive state foresters in this country. He is always pounding away on the subject of tree growing and forest protection, and if North Carolina does not come out of the wilderness of conservatism and take high rank among progressive states it will not be his fault.

A Book on Logging

A look containing nearly six handred pages has been issued from the press of John Wirk & Sons, of New York and London, the well known polarisher of standard looks on all phases of forestry, legging, and lumbering. The author of the work is Ralph Clement Bryant, pressor of lumbering in Yale University. The book was prepared for use as a textbook in forest schools, but its usefulness will not stop there, for it is valuable to the operator in the woods, to the sawmill man, and to the timber owner. It is not only a textbook for the student but it is a readable, interesting, and instructive treatise for all who work in the woods or with forest products. It covers the field more thoroughly than any other single book.

After a very full discussion of forest resources, timber ownership, corumercial tree species, timber insurance and timber londs, the subject of logging is taken up. Beginning with labor, camps and tools, the discussion fellows the various operations, such as felling the trees, meaning the logs, transportation from forest to mill, skidway and storage sites, and all else that the practical operator should know. In the matter of log transportation alone, the foliowing topics indicate the scope of the discussion: "Hand logging and animal snaking," "sleds and sled lauding," "wheeled vehicles," "power skidding," "aerial transpays," "timber slides and cluttes," "forest railways."

The construction and operation of the logging railroad is an interesting subject which the author handles from the engineer's and the practical man's standpoint, separate chapters being given on "inclines," "motive power and rolling stock," and "loading and unloading log

Water transportation is treated no less fully than is transportation by land. Chapters under this heading are "floating and rafting," and "flumes and shites." Another valuable chapter gives a summary of logging methods in specific regions. The minor industries, which include turpentine orcharding and the barvest of tan bark, are given a prominent place.

The appendix is a veritable encyclopedia of useful information for the logger and lumberman, and consists of terms used in logging, log rules and tables of cubic contents, log grading rules, wage lists, stumpage values, and estimates of standing timber in many of the states. The book is illustrated with 133 pictures of scenes, processes and operations. Numerous books and reports are cited for the guidance of persons who may want fuller information on particular subjects.

It was inevitable that such a book as this should appear, because there is a genuine demand for it. It will not displace any other work on the subject, but will occupy a place of its own. The author states in his preface that the work was prepared for forest schools, but it is a safe prediction that the largest buyers will be lumbermen, from the lumberjack to the largest eperator. The price is \$3.50 net.

Lidgerwood Overhead Skidders

The Lidgerwood Manuficturing Company of 96 Liberty street. New York, has issued bulletin 54, setting forth the merits of the latest improvements in overhead skidders, as they have been developed by usage with the large timber of the Pacific coast. This logging device is the result of constant improvement during twenty-seven years, since it was first used in southern eypress swamps. Its field has been calarging ever since, and logging by that method is now common in all important timber regions. By its employment, logging can be done on tracts where horses and oxen cannot go, and, where the construction of steam roads would be expensive if not impossible. Overhead skidding lands the log more cheaply and in better condition than it can be done in any other way. The logs are brought in with one end suspended, or if necessary, they can be carried bodily through the air. The apparatus is operated by a crew of from nine to thirteen men.

The Future Cut of Southern Pine

Yale University has published a bulletin dealing with the future possibilities of shortleaf and loblolly pine in the South. The study was made on a large tract in Arkansas and Louisiana, and the conclusions apply particularly to that locality, but with certain modifications they may be applicable in many parts of the South. It is claimed that for a period of one hundred years a tract should produce 150 feet, board mensure, per year, under forest management. Part 1 of the bulletin was written by Herman H. Chapman, professor of forest management in Yale. A second part, dealing with utilization of timber with a view to reducing waste to a minimum, was written by Ralph C. Bryant, professor of lumbering.

Triangular Crossties

The Great Northern Railway has been experimenting with three-sided ties. A considerable number have been in use for some time and the result is said to be satisfactory. As far as saving timber is concerned there will be no economy, since the new style tie contains as much wood as the old. The upper face is twelve inches. The claim is made that the shape causes the piece of timber to imbed itself in the ballast more firmly, and it is less liable to become loose and roll about as the trains pass over.

Connecticut Forest Study

Yale University has published a bulletin by Ralph C. Hawley, assistant professor of forestry in that institution, on "a working plan

for the woodlands of the New Haven Water Company." The interest of the public in this matter is due to the methods employed and the results attained in scientific forestry. Whatever proves to be practical on the tract of 8,000 acres in Connecticut may be safely undertaken on a larger scale where conditions are similar. The work has been in progress about twelve years, and the bulletin gives the result up to the present time.

An Excellent Arbor

E. C. Atkins & Co., Inc., of Indianapolis have just secured a patent on a sliding sleeve arbor for use on automatic saw sharpening machines. The machine insures the proper finish in both the face and back of the tooth, no matter how irregular the feed of the machine may be. It satisfactorily overcomes the burning of saw teeth, which hardens the metal, renders the tooth brittle, causes it to crumble in the cut, making it impossible to properly swage.

The accompanying illustration shows the arbor in position and attached to the head of a Hanchett machine. A Covel saw or any standard gummer can also be used in connection with this arbor, or it can be made of proper specifications for any grinding machine.

The upper or inside spring may be removed and the hub holding the grinding wheel adjusted to any desired distance from the stationary collar, thus giving an automatic grinding action. This hub may be placed against the collar, which will give a stationary grind on back of tooth.

The lower spring is held in place by two small jam nuts, which regulate the pressure on the spring. At no time will the wheel grind into

ATKINS AAA SLIDING SLEEVE ARBOR

the face or back of the tooth so as to injure it. After adjusting, its work will require no supervision from the filer, so there is no possibility of injuring the saw tooth.

It is stated in the instructions that should the feed finger fail to bring the tooth up to the correct position, the lower spring releases the grinding wheel sufficiently to prevent burning. If the feed finger brings the tooth to position too quickly, the upper spring releases the grinding wheel, thus preventing injury to the tooth.

The arbor is furnished complete with all attachments and wrenches for adjusting the collar to any standard automatic saw sharpening or grinding machine.

The Smithsonian Annual Report

Those who are interested in keeping up with the latest advance in Smithsonian Institution, Washington, D. C., for 1912. It is a volume of 780 pages, with numerous illustrations, and its scope is indicated by a partial list of the special articles it contains: The Year's Progress in Astronomy; The Spiral Nebulæ; The Radiation of the Sun; Molecular Theories and Mathematics; The Connection Between Ether and Matter; Experiments with Soap Bubbles; Mensurements of Infinitesimal Quantities of Substances; Latest Achievements in Chemical Industry; Holes in the Air: Recent Great Eruption of the Volcano Stromboli; The Glacial and Post-Glacial Lakes of the Great Lakes Region; Applied Geology; The

Relation of Parcobotany to Geology, A. Fripeto Madigassia. The Fernanting Climits of North America. Acts and Their Gorsts. Expedition to the South Pres., The Smar Proofens, and nearly others.

Help Wanted

Veneet man a returners are moss army on the Labit of buying in considerable quantities their veneer logs from selected trees picked up in small groups in different parts of the rural sections. The men who do the work of collecting and shipping these logs are usually not overly equipped in the matter of the finer points of modern schooling, nor are their business communications usually suitable as models for commercial school courses. A fair example of this type of communication is shown in this connection. This communication was received on a postal curd, offener for that it was a postal card in reading the fext)

"In Glost and 2 R1 of Laden God 1 Mor Car to Lode there ar

 $17~{\rm Lags}$ Wood like to laye the Mono, for the boding $^{\prime}$. It is interesting to note that the most clearly defined section of the communication is that referring to the r municiation requested.

Utilizing Dogwood Waste

The cuttings from bitlets constituting the raw material in shuttle manfacture are small pieces, but a way has been found of putting them to use in the manufacture of knife handles. The smallest of such are known in the trade as "scales"; that is, the sides of pocket knife handles. Expensive foreign woods are frequently imported for this class of articles; but dogwood answers the purpose nearly as well. It is not difficult to stain or dye the wood any desired color. Most of the shuttles used by textile mills in this country are of dogwood cut in the southern states, from Virginia to Florida, and west to the Mississippi river.

A New Clothes Stick

A genius with an inventive turn or mind has invented a clothes stick for manipulating launity in the wash tub. He will go a long way if he has something better than the sawed off broom bandle which has been used time out of mind in agitating the wash during the critical period which it spends in the boiler. If the new stick is not made of wood, lumbermen will have just cause to complain of the dangerous inroads of substitutes.

The Shoe Last Trade

America is not supplying the whole world with shoe lasts, but is furnishing lasts to a large portion of the world. They go to all the leading countries. Even China, where the usual kinds of shoes are not much worn, is a regular customer of American shoe last factories. Most lasts are of maple. It is popularly supposed that large quantities of beech are used in this business, but statistics do not show it. The quantity is very small. No lasts are made of soft woods, but "forms" and "trees" are manufactured of basswood, vellow poplar, and various other species. These are used in making rubber boots and shoes, and for inserting in shoes to hold them in shape when not in use.

Austrian Wainscot Oak

American oak competes with Austrian oak in the European markets. The London Timber Trade Journal says that a remarkable state of affairs exists in Slavonia, the region which supplies some of the best Austrian oak.

On the one hand, there is a slump, while on the other there is a rise in prices. The really first-class lots, from which the export material, such as wainscots, squares, etc., is produced, show a steady advance, but in the forests where material of lower quality is to be found there has been a decided, drop in prices. The most important point is the fact that the production of sawed wainscot, which was decidedly reduced last year, will be still more curtailed this year. Firms which previously produced sawed wainscots in large quantities are being pushed out of the market, as the forests suitable for making that class of wainscots are being held by firms who are selling the wood in the round to Germany. Consequently, a great reduction is to be expected in the production of sawed wainscots, and it is almost certain that no large quantities of this wood will appear on the market next year. The general opinion is that wainscots will rise in price, and even should one or two merchants have a larger quantity on hand, which they could, if so disposed, sell at the old prices, there is no doubt, on account of the absolutely small stock, that a rise will be the result.

Canal's Effect on Trade

The revolution in transportation of the world, which will follow the completion of the Panama canal, is proving a subject of increased interest in Japan, according to a recent issue of Trade and Transportation.

From the standpoint of distance the new trade route opened by the Panama canal will place Japan in a much better position than she occupies today. The course from Yokohama to New York, Japan's great silk and tea market, will be shortened by some 3,500 miles, as compared with the route by way of Suez, and for steamers maintaining a speed of twelve knots this will mean a saving of about twelve days. For ports southward from New York the distance will, of course, be still further reduced, while by way of Suez increases the distance. Thus, from Japan to all points south of New York there will be a saving of from 3,500 to 5,700 miles as compared with the Suez route, and the saving in time will be from nine to twenty-six days, according to the size and speed of the steamer.

For Japan's more important exports, however, the route by Suez is too slow to be of practical utility, and such goods as tea and silk have to

the whole tavorable to herself. Trade with America has in the last few

000,000 yen; Germany, 68,000,000 yen; France, 49,000,000 yen;

foreign trade, and of this 142,000,000 yen represents exports. The

In other respects American exports to Japan would be affected favor-Europe; but the new route will probably turn this order to America, The same will likely prove true of cars, engines and freight wagons. In regard to leather, paper and petroleum the future is supposed to

The Brittons Rejoice

Some of the business men in England are just now congratulating themselves on what they term Great Britain's diplomatic victory over the United States in the matter of tolls at Panama. The President is quoted as saying that he has come to the conclusion that the British contenion has been correct "that free tolls for American shipping are a violation of treaty obligations," and the conclusion is added that the "administration is confident that it will now be able to secure the repeal of the clause." If the outcome proves as satisfactory to our cousins in Great Britain as they anticipate, there will be no occasion for them to carry out their threat to build a canal of their own.

Repairing School Furniture in London

The London school board maintains a shop for the purpose of repair ing school furniture. This shop has been in operation ten years or more. For some reason, which has not been explained, repairs are growing smaller and fewer, and in order to keep the shop busy, the men were recently set to work making new furniture. That course did not meet with approval from the authorities, and an order was passed that the shop should confine itself exclusively to repair work.

British Columbia's Timber

David F. Wilbur, United States consul at Vancouver, British Columbia, recently supplied the government with interesting figures in degard to the timber resources of that province. The total wooded area is placed at 100,000,000 acres, and the quantity of timber at 300,000,000,000 feet. The area is large, but the total stand is less than many have supposed. The state of Washington alone contains a third more timber than the whole of British Columbia. The present annual sawmill cut in that province is not one-third that of Washington. It fact, it is approximately the same as that of Arkansas. The annual growth is estimated to exceed the cut five fold.

The province has organized a forest service and has it in good working order. An export tax of one dollar a thousand feet is charged on timber, but there are exceptions. The export tax brought in \$35,225 last year. from a total of 53,280,000 feet shipped. More than half of the total exports was western red cedar.

British Columbia mills are unable to sell their low-grade lumber in the United States because of the tariff, and it is shipped across the Rocky mountains to the prairie regions of Canada. Here it comes in competition with lumber shipped from the United States. In 1912 the imports from the United States into the prairie region of Canada amounted to \$3,309,-

This competition is keenly felt in British Columbia, and was referred to in the provincial forester's report as follows:

"The total quantity of the lumber imported into British Columbia's field of trade in the first ten months of 1912 was 257,053,000 feet. The average price of this lumber was from \$11.07 to \$11.44 per 1,000 feet, which shows that the market could have used the low-grade lumber from the British Columbia mills. As the direct result of this importation from the United States, approximately 250,000,000 board feet of timber were left lying in the woods of British Columbia or went to the incinerators.

"The importation of American lumber was 15.8 per cent greater in 1912 than in 1911. The imports of American cedar in particular have increased most rapidly, being 381 per cent greater in 1912 than in 1911. This choking of the natural market with foreign low-grade material is seriously impeding the development of forest conservation in British Columbia. The American manufacturer pays no duty on his sawmill He produces lumber more cheaply than it can be produced in Canada. On the average there is a larger proportion high-grade timber in the United States than in Canada; a larger percentage of uppers and clears is produced than is possible in British Columbia. The American

manufacturer makes a profit on the uppers and clears and can afford to realize on the low-grade stock at a low price.

"This is not the case in British Columbia. Both in the interior and on the coast conservative logging would produce a large amount of low-grade material. But the trouble is that the British Columbia millman can not sell his low-grade material; the British Columbia logger can not sell his low-grade logs, therefore the low-grade lumber goes into the burner or is used for fuel, and the low-grade logs stay in the woods."

The British Columbia lumber exporters are looking forward with interest to the completion of the Panama Canal, expecting that it will largely increase the lumber exports of the province, as the shippers of British Columbia lumber will be enabled to land their product at Atlantic coast ports for about one-half the present rate overland by railroad, and also cheaper than the Pacific coast states, on account of transportation on other than American vessels.

Oak Leaves as Silkworm Food

The leaves of the white mulberry tree have been regarded as the only possible food for silkworms for generations. Even the red mulberry has been tried and found wanting. Worms which feed on leaves of any other tree than the white mulberry produce silk of a quality so inferior that it has little chance in the market. At least, such has been the understanding of silk dealers in this country.

However, that belief seems to have been not well founded. Recently U. S. Consul Julean H. Arnold of Cheefoo, China, investigated the silk Industry of Shantung province, and was surprised to find that the Chinese were feeding the worms on oak leaves and were manufacturing the product into pongee silks, for which that part of China is noted. Between fifteen and sixteen thousand men are engaged in the industry.

In that part of China practically the only wheeled vehicle known is the wheelbarrow, of which thousands are in use. They carry as much as 2,000 pounds, but in that case a donkey pulls while the coolle pushes. The silk trade in that region is said to be steadily increasing, though modern improvements have scarcely made any inroad upon the people's ways of working.

Building Operations for October

Building operations are fluctuating this season from month to month. In August tast year was unfavorable. In September the showing was favorable. In October the pendulum swings back to the other side. The statements of building permits issued by 56 cities and received by the American Contractor, Chicago, reach a total

value of 845,004,116, as compared with 852,167,800 for October, 1912, a decrease of 14 per cent. Twenty-three cities, however, report gains, Among the more notable of these are Albany, with 114 per cent gain; Colar Rapids, 195 per cent: Columbus, 72 per cent; Dallas, 89 per cent; Kansas City, 72 per cent; Peoria, 92 per cent; Pittsburgh, 71 per cent; Toledo, 115 per cent.

The fabulation for the first ten months of the year also makes an unfavorable showing when compared with the splendid construction work

Scattle in October issued furlding permits to the value of 8474,190, Comparisons in a tail are as follows:

News Miscellany

=< MISCELLANEOUS >=

The Williamson Lumber Company has been incorporated at Lexington, Ky., with \$50,000 capital stock.

The Little Motor Car Company of Flint, Mich., has been succeeded by the Cheverlett Motor Car Company.

The Bridgeport Spoke Works is the style of a concern incorporated at Bridgeport, Ala., with \$10.000 capital stock.

The Peoples Manufacturing Company recently organized at Greenfield, Ind. This concern will manufacture refrigerators.

H. L. Hall, secretary and treasurer of the Excel Manufacturing Company, Shelbyville, Ind., has sold his interest in that concern.

The T. C. McVey Lumber and Tie Company has been incorporated at Charleston, W. Va. The company has \$25,000 capital stock.

The Columbia Furniture Company has started business at Canton, O. The concern is incorporated and has a capital stock of \$10,000.

The D'Heur & Swain Lumber Company of Seymour, Ind., announces

that on Nov. 1 it changed its name to Swain-Roach Lumber Company.

The George Webster Lumber Company, Springfield, Mass., has increased

its capital stock from \$100,000 to \$200,000, one-half of it to be preferred.

The Jacob Wiser Company is the style of a recently organized concern which has incorporated with \$75,000 capital stock to manufacture chairs

Burton Hull and E. E. Wadsworth have engaged in a partnership to conduct a wholesale bardwood lumber business at Kendallville, Ind. The

company will occupy an acts of ground and have 600 feet of track tot switching and will carry in stock about 125 cars of hardwood bunder from West Virginia mills.

=**≺** CHICAGO **>**=

The Austin Eager Veneer Company is the style of a recently organized concern which will do a general lumber and veneer commission business at Chicago. Sidney Austin and William Eager are the incorporators. Headquarters are in the Steinway building.

J. C. Knox of Cadillac, Mich., secretary of the Michigan Hardwood Manufacturers' Association, stopped at Chicago last week on his way to Eau Claire, Wis., where he attended the meeting of the Northern Hemlock & Hardwood Manufacturers' Association.

George E. Foster of the Foster-Latimer Lumber Company, Mellen, Wis., and R. B. Goodman of the Goodman Lumber Company, Goodman, Wis., spent several days in Chicago following their attendance at the meeting of the Northern Hemlock & Hardwood Manufacturers' Association at Eau Claire.

William Hopkins of the New River Lumber Company, Cincinnati, O., was in Chicago several days of last week.

M. L. Pease of the Galloway-Pease Company, Poplar Bluff, Mo., spent most of this week with the local trade on busines

C. H. Barnaby of Greencastle, Ind., president of the National Hardwood Lumber Association, was in Chicago last week in conference with Frank F. Fish, secretary of that association.

F. W. Hanley of the Williamson-Kuny Mill & Lumber Company, Mound City, Ill., spent most of last week with the local trade.

James F. McSweyn, president and general manager of the Memphis Band Mill Company, Memphis, Tenn., spent Wednesday and Thursday of last week with the local trade.

H. C. Hossafous of Dayton, O., prominent as a veneer manufacturer, was in the city a couple of days last week

G. H. Evans of the G. H. Evans Lumber Company, Chattanooga, Tenn., spent several days of last week in Chicago on a business trip.

W. W. Gillespie has sold his interest in the veneer concern of Houghton & Gillespie, to his former partner, T. E. Houghton.

HARDWOOD RECORD is in receipt of a postal card from R. S. Bacon of the R. S. Bacon Veneer Company, North Ann street, Chicago. Mr. Bacon has been making an extensive trip abroad investigating the source of supply of Circassian walnut. He wrote from Tiflis, in the province of Trans-Caucasia, Russia, which is in the heart of the Caucasus mountains, from where comes the Circassian walnut of commerce.

H. C. Miller of the Hardwood Mills Lumber Company, Chicago, left on Thursday of last week for a two weeks' hunting trip in Wisconsin. He went directly to Merrill, from where he struck out into the country. He is equipped for deer hunting and anticipates an enjoyable vacation.

Thomas McFarland of the Thomas McFarland Lumber Company, Cairo, Ill., was a recent visitor to the local trade.

———≺ PHILADELPHIA ≻—

Charles K. Parry of Charles K. Parry & Co., sole selling agents for the Carolina Spruce Company, Pensacola, N. C., recently returned from an extended stay at the plant, with the report that they are cutting 90,000 feet of spruce and hardwood a day. Mr. Parry says the logs they are turning out, especially in chestnut, oak and ash, are of the highest grade and the best they ever marketed. Mr. Parry also visited their plant in Selma, N. C., where they are shipping short and long leaf pine, of which they have a cut ahead which will keep them busy for the next five years.

The Whiting Lumber Company reports more liberal orders recently with business keeping fairly steady on the whole. No decided improvement in trading is anticipated until the disturbing local and national questions

are settled.

Robert W. Schofield of Schofield Brothers, owners of the Saltkeatchie Lumber Company, Schofield, S. C., who recently returned from their mill, says they are pushing their plant to full capacity getting out excellent stock, among which is some fine poplar and cypress. Mr. Schofield says business is only fair at this time, but they have many large orders on hand which will keep them busy for some time.

J. H. Campbell of Currie & Campbell reports business spasmodic and prices weak. They are cutting lumber every day at their mill, but are

not inclined to force it on the market.

Frederick S. Underhill of Wistar, Underhill & Nixon says they are feeling the potent changes in the administration, but there is nothing to denote a panicky condition in the near future. Orders are booked right along, but it requires more hustling to get them as buyers are conservative.

William P. Shearer of Samuel H. Shearer & Son reports business running along fairly well, with perhaps a shade of improvement. He does not look for normal trading until the various disturbing political questions are settled.

Frank T. Rumbarger, well-known lumberman of this city, has joined the selling staff of the Thomas E. Coale Lumber Company

The Frackville Lumber & Supply Company, Frackville, Pa., was recently chartered under Pennsylvania laws, capitalized at \$5,000.

The Current River Lumber Company, New York, was incorporated under Delaware laws, Capital \$100,000.

Application was made recently by the Pacific Timber Company to change its name to the California Timber Company, with a capital stock of \$500,000.

≺ NEW YORK >-

The annual meeting of the New York Lumber Trade Association will be held at headquarters on Wednesday, Nov. 12.

The Empire State Forest Products Association will hold its annual meeting and dinner in New York, Nov. 13. This association includes nearly all of the lumber menufacturers of northern New York and some of the pulp and paper interests. It has had a good influence on forestry legislation in the state. The meeting will be held in the rooms of the Merchants' Association, Woolworth building.

Vicegerent Kammer is working hard on the Hoo-Hoo concatenation to be held Nov. 14 at Lisenweber's. A good class of kittens is assured.

The Astoria Veneer Mills & Dock Company has lately installed a new seven foot Clark band mill. The company installed this additional equipment to take care of special requirements of the trade during the active period for log importations. The log pond has been enlarged to accommodate 3.500,000 feet of logs in storage.

II. L. Black, known to the local hardwood trade through former connections, is sales representative in this section for Caffish Brothers, Jamestown, N. Y. Mr. Black's headquarters are at the Monticello hotel, 35 West Sixty fourth street. H. W. Alling, sales manager of the company, spent several days in town during the fortnight.

The A. Sherman Lumber Company, wholesaler of hardwood lumber and flooring, will handle the output of the Redwood Manufacturers' Company of San Francisco, in local and Long Island, eastern Pennsylvania, New Jersey and New England territory.

E. S. Foster, for many years a figure in New York hardwood circles, is president of a new corporation known as the Woodbury-Foster Lumber Company, W. H. Woodbury, Askeville, N. C., is treasurer. The company operates a hardwood mill on the Southern railway and will have an assembling yard at Askeville with dry kins and planing mill. The company will specialize in dressed stock, dimension, moulding, trim, etc., in addition to rough lumber business. Mr. Foster is located at \$1 East One Hundred and Twenty-fifth street, selling office.

L. H. Street, selling representative for Clark Brothers, sawmill machinery house, Olean, N. W. was a recent visitor to New York. He reports good business and has made several sales in the metroplitan district.

George H. Reeves, prominent lumberman and box manufacturer of Brooklyn, died Oct. 25 at his home in Greenport, L. I. He was 75 years old. His entire business career had been in the lumber and box business, dating back to 1870.

A. C. Tuxbury, head of the A. C. Tuxbury Lumber Company, Charleston, S. C., and the Northern Lumber Company, North Tonawanda and New York City, died at his home in Montelair, N. J., Oct. 28. He was well known in the hardwood trade of New York.

——≺ BUFFALO >—

The Automobile Club of Buffalo held a Hallowe'en celebration on Oct. 29 and the lumbermen were largely represented among the several hundred who took part in the festivities. The committee in charge was headed by I. N. Stewart as chairman, and among the other members were O. E. Yeager, C. Walter Betts, J. B. Wall and A. W. Kreinheder. The clubhouse and grounds were decorated appropriately for the occasion.

According to Edward N. Smith of Watertown, who delivered an ad-

According to Edward N. Smith of Watertown, who delivered an address at the state waterways association meeting at Albany on Oct. 31, the water power of New York state developed to its full capacity would give employment to 3,000,000 persons and support a population of 12,000,000. He argued for the adoption of the proposed amendment to the state constitution permitting the flooding of state forest lands for the construction of storage reservoirs.

The hardwood firm of I. N. Stewart & Bro. has been dissolved, Hugh A. Stewart retiring and I. N. Stewart continuing the business, in which he has been interested for twenty years. H. A. Stewart has gone to the Pacific coast, where he will probably engage in lumber business.

W. K. Jackson of Jackson & Tindle, who recently returned from a business trip to Michigan, is now spending some time at his new timber tract in northern Ontario.

Hugh McLean has returned from a short vacation trip to Gatineau River, Canada. While away he attended the wedding of his niece, Miss Edith McLean, daughter of Angus McLean of Montreal, to Dr. A. L. Gilday of that city.

S. B. Taylor has returned from a long trip to the lumber centers south of the Ohio, where he found business decidedly quiet. He considers the difficulty to have been an overbuying of stock late last season.

difficulty to have been an overbuying of stock late last season.

Alfred Swanson has been spending some time in Pennsylvania lately, looking after the shipping of hardwoods for J. M. Briggs & Co. He has

also been doing some pheasant hunting during the past month.

B. F. Ridley of Davenport & Ridley, has been spending a good deal of time during the past month in Pennsylvania, shipping chiefly basswood and maple, for which the yard has a fair demand.

The Standard Hardwood Lumber Company has been getting in some oak, chestnut and poplar lately and reports that there has been a very fair demand for hardwoods in general.

Miller, Sturm & Miller are getting in fair-sized stocks of oak, chestnut and maple and state that business, while not very active, is better than it was during the summer.

-----≺ PITTSBURGH ≻=

Henry Vanosdell, Fred Edwards and W. D. Hanville have being at the Garretson lumber yard at Ashland O, and will run it under to notes of the H. V. & E. Company.

Caughey Lumber Company, according to Manager S. Seaman, is doing well this tall. Tell's out out its original operation in Butler county, but has recently secured another nice tract of hardwood timber there, also an operation in Center county, Pa., and one in West Virginia

Jos. W. Cottrell is doing a fine business in mining stock from the branch office at Uniontown, Pa. He has a splendid lot of mixed hardwoods available for this purpose

The engagement is announced of A. Adelman, president of the Adelman Lumber Company, and Lillian Adelman of New Jersey. The wedding will probably take place late this winter.

The Freehold Lumber Company has added a new salesman and is working the Ohio trade very hard at present. Sales Manager Robert Gannon is not at all discouraged over the outlook, as business is coming right

The Duquesne Lumber Company broke all records in October for ship ments from its big plant at Braemer, Tenn. President A. Rex Flinn spent a few days at that plant last week.

Building operations in Pittsburgh in October made a substantial gain. The total for last menth was 204 projects, amounting to 81,362,387, as compared with 8797,300 in October, 1912.

= ≺ BOSTON >=

The Perry Lumber Company has been organized in Eastport, Me., with a capital stock of \$10,000. Ambrose S. Blanchard of Eastport is president and treasurer.

Swain & Baggs have organized at Berwick Me., for the purpose of carrying on a wholesale lumber business. Charles B. Swain of Medford, Mass., is president, and Francis G. Baggs of Hingham, Mass., is treasurer. Both Messis, Swain and Baggs are well known in the lumber trade in Boston

Thomas Alfred Wilson, manager of the Wilson Lumber Company, Concord, Mass., was married Oct. 25 to Miss Bessie Alice Hunt, daughter of Mr. and Mrs. George W. Hunt.

The final certificate of dissolution of the States Lumber Company, New Haven, Conn., has been filed. This certificate states that the assets of the company have been divided among the stockholders.

The Lincoln County Lumber Company of Bath, Me., has been reorganized under the name of the Bath Box Company. Arthur J. Dunton has been elected president and Wellington Moore treasurer.

Fred A. Crossman of Kingfield, Me., is reported to have opened a new woodworking plant at Rochester, N. II. He is located in a part of the building occupied by the' Rochester Lumber Company.

Elmer E. Doc, who for several years has been manager of the E. L. Chandler Lumber Company, Orleans, Vt., has been elected a director of the Parker-Young Company and the Rickford Lumber Company, two wellknown Vermont lumber companies.

The E. O. Lake Lumber Company, Boston, was recently incorporated with a capital stock of \$50,000 by Elmer O. Lake, Carl E. Milliken and Belmont Emerson.

=≺ COLUMBUS ≻=

The Churn & Washer Company of St. Marys, O., has taken over the plant and patent rights of the Easy Washing Machine Company.

A movement is on foot among business men's organizations and architects' societies in Ohio to have the Ohio Industrial Commission, which has taken over seven state departments, take up the matter of having supervision over state buildings. It is claimed that the law creating the Industrial Commission gives it power to take over the regulating of state build-In case the courts do not uphold that view of the matter, steps will be taken to have it passed at the next session of the Ohio legislature.

The Celina Hardwood Company of Celina, O., has been organized with a capital of \$10,000 with the following officers: J. E. Raudebaugh, president; A. R. Hunter, vice president; O. J. Myers, secretary, and E. Bourrelle, treasurer. The new company will be located on the Cincinnati Northern railroad near Celina.

The King Lumber Company of Canton, O., has been incorporated with a capital of \$25,000 to handle lumber by W. E. King, J. M. Beck, George H. Walker, and H. E. Andress.

The announcement is made that George H. McMullen & Co., a newly organized concern, has taken over the handle business formerly conducted by George H. McMullen.

The Breece Manufacturing Company of Portsmouth, O., manufacturing rims and spokes, is considering plans for the erection of a large drying house near its present plant.

The David Lumber Company of Toledo, O., has gone out of business. At East Liverpool, O., the East End Lumber Company has recently started in business.

The Wood Lumber Company of Lorain, O., contemplates making a number of radical changes in its plant. One of the changes will be the installation of twenty-one individual motors, each of which will operate a separate machine.

The Indiana Board and Filler Company of Decatur, Ill., has purchased

Auron L. Kelsey, one of the oldest lumber dealers of Toledo, died recently at the age of ninety one years. He came to Toledo in 1850 and six years later started in the lumber business with Nathan Reeve.

R. W. Horton, sales manager for the central division of the W. M. Ritter Lumber Company, reports a good demand for hardwoods from both dealers and manufacturing plants. He says prices are well maintained and the prospects for the future are good. Dry stocks are light. Dealers are only buying what they want for immediate needs.

—≺ BALTIMORE ≻—

George Esselmann, maanfacturer of picture frames at Sharp and West streets, Baltimore, whose place was burned out last spring, has decided to discontinue business. The plant has been taken over by Milton Bosley, who was superintendent of the plant under Mr. Esselmann, and there is to be no change in the general method of conducting the establishment.

The R. E. Wood Lumber Company reports an excellent run for its sawmill plant in Tennessee during October, the returns showing that the mill, which is a seven foot band, turned out upwards of 900,000 feet of hardwoods during the month. It was the best record made there.

William Akers of the William Akers Lumber Company of Atlanta, Ga., was in Baltimore ten days ago in the course of a business trip. He spoke conservatively about the trade situation.

President Fred Arn of the National Lumber Exporters' Association has appointed as delegates of the organization to the annual meeting of the National Conservation Congress: Richard P. Baer, Richard P. Baer & Co., Baltimore; J. M. D. Heald, Price & Heald, Baltimore; Harvey M. Dickson, Dickson Lumber Company, Norfolk, Va.; R. J. Camp, the Camp Manufacturing Company, Franklin, Va., and R. J. Darnell, R. J. Darnell, Inc., Memphis, Tenn. It is hoped that all of the delegates will be able to attend, as much interest is expected to attach to the proceedings.

George Grauer, eighty years old, lumber and wagon manufacturer at 326 Belair avenue, died on Oct. 23 at his home on Erdman avenue, of a stroke of paralysis sustained the previous Saturday. Two sons, Henry and George, and two daughters survive. Mr. Grauer came to the United States from Germany when he was fifteen years old, and has contributed much to the development of the section in which his yard is located.

=< INDIANAPOLIS >-----

G. W. Bennett, formerly in the lumber business at Logansport, has taken a position with the Hotel Severin, Indianapolis.

On suit brought by Wertz and Amos, hardwood dealers of Edinburg, William F. Pell has been appointed receiver for the Schoentrup-Worden Rack Company, Shelbyville.

The death of James L. Barley of the Haas, Spencer and Barley Hardwood Company, Vincennes, and manager of the Barley and Spencer Lumber Company, Marion, occurred at his home in Marion on Oct. 23. Mr. Barley was sixty two years old and had wide business interests. A widow, one daughter and three sons survive.

On Oct, 26 the Indiana Hardwood Flooring Company and the B. D. Brooks Lumber Company, together with the Sattley Machinery Company, suffered a loss of about \$15,000 from fire. A building and machinery owned by the B. D. Brooks Lumber Company, but occupied and used by the two other concerns, were destroyed.

A general lumber business will be conducted at Jasonville by the newly organized Harris Lumber Company, which has been incorporated with an authorized capitalization of \$25,000. Those interested in the company are Curtis Harris, Alfred Harris and Blanche O. Baker.

Sheriff Theodore Porticus has sworn in two hundred prominent business men to serve as deputy sheriffs in connection with the Indianapolis street car strike. Among them are James T. Eaglesfield of the Eaglesfield-Stewart Company and Eaglesfield & Shepard hardwood concerns; Harry C. Atkins, Fred C. Gardner and Nelson A. Gladding of E. C. Atkins & Co. and O. D. Haskett of the Burnet-Lewis Lumber Company.

=**≺** MEMPHIS **>**=

The Gayoso Lumber Company is installing a hardwood mill here which will have a capacity of about 40,000 feet per day. The mill was purchased from the Fair-Crittenden Lumber Company a short time ago and although it has been used slightly it is in first-class condition. The Gayoso Lumber Company owns a large amount of timber in Tunica county. It has been bringing the logs to Memphis and having them cut at custom mills. As soon as its own mill is installed, however, which will be about Jan. 1, it will do its own sawing. The firm has also increased its yarding capacity to take care of the output.

The big new double band mill of Russe & Burgess, Inc., has been completed and was placed in operation a few days ago. This mill has a daily capacity of about 50,000 feet, which is an increase of approximately fifty per cent over that of the mill which was dismantled in July.

Business conditions here, taken as a whole, are quite satisfactory. Bank clearings during October broke all records in the history of this city, exceeding last year by more than two million dollars. While the big sales of cotton at unusually high prices account for a considerable portion of this increase, it is pointed out that lumber interests have made a substantial contribution through the increased business done during October this year as compared with the same month in 1912.

The Yazoo and Mississippi Valley road has begun work on the big yards to be established at Noncommah and on the shops which are to be located at the same point. The Vazoo and Wississippi Valley road is a most important factor in the hardwood lumber industry in this city and section as it handles a big portion of the timber from the Mississippi valley to this city and as it also plays an important part in the handling of export shipments by way of New Orleans. Lumbermen are, therefore, very much interested in the increased facilities which will result from the work now under way. It is estimated that it will involve a total of \$500,000.

=≺ NASHVILLE >=

Barber & O'Connor are having installed near Sparta, Tenn., a new plant for the cutting of shuttle blocks and dimension stuff of dogwood, blekory and oak. The plant of the company will be on Rural Route No. 3 in a section well timbered with blekory, dogwood and oak, which has not been developed. The firm expects to have the plant in operation about the middle of November.

Olin White has been appointed vicegerent for the Middle District of Tennessee of the Order of Hoo-Hoo, succeeding Charles M. Morford, who has held the position for the past year. Mr. White is manager of the local interests of Wistar, Underhill & Nixon of Philadelphia, and has resided in Nashville four years. He is a prominent member of the Nashville Lumbermen's Club, a director of the local Board of Trade, and a live wire.

Building permits for the month of October in the city of Nashville called for improvements to cost \$73,496, compared with \$65.518 for the corre-

sponding month of 1912.

It is probable that the Nashville Lumbermen's Club will carry its grlevance as to milling in transit, and also the question of "policing logs" to the Interstate Commerce Commission. The transportation committee, of which A. B. Ransom is chairman, has been authorized to take action. Local shippers want such privileges as are accorded other cities. An attorney representing Evansville and Louisville on similar complaints appeared before the local club, and made a proposition to have Nashville folin those cities, and if the committee deems it wise this will be accepted.

The car shoringe in southern territory has been steadily growing more serious. Lumber shippers have been feeling the effect of the shortage to some extent, but not as greatly as some other industries. Railroad officials have been almost begging shippers and consignees to co-operate in prompt loading and unloading of cars, in order to relieve the situation,

—≺ LOUISVILLE ≻—

The annual meeting of the Louisville Hardwood Club will be held at the Seelbach hotel Nov. 11. This meeting will conclude five years of work on the part of the club, which has met over 250 times during that period. The present officers of the organization are Edward L. Davis, Edw. L. Davis Lumber Company, president; D. E. Kline, Louisville Veneer Mills, vice-president; C. M. Sears, Edw. L. Davis Lumber Company, treasurer, and G. D. Crain, Jr., secretary.

Lumbermen took a prominent part in the hearing of the complaint of the Louisville Board of Trade against the Louisville & Nashville railroad, Involving the switching regulations of the road, which have been the source of much criticism. Among those who testified were T. Hoyt Gamble Gamble Bros., whose plant is at Highland Park, a suburb of Louisville; J. W. Oden of the Oden-Elliott Lumber Company, Birmingham: G. E. Evans, Chattanooga; John F. Frey of the Frey Planing Mill Company, Louisville, and others. The general line of the testimony was to the effect that on account of the L. & N.'s switching rules many lumbermen were unable to buy to advantage on other lines; that unreasonable delays Intervence between the sbipment and delivery of the lumber, and that Industries isolated on L. & N. switches suffered loss and inconvenience on this account. The hearing was continued until Nov. 20 after the evidence for the complaint had been completed.

Robert V. Board, the new president of the Kentucky Wagon Manufacturing Company, one of Louisville's leading woodworking industries, was formerly in the lumber business at Hereford, W. Va

Edward L. Davis, the local hardwood man, has returned from Canada, where he took a vacation and indulged in his favorite sport of hunting. Mr. Davis has the reputation of being the best shot in the hardwood business.

J. V. Stimson & Co., the Owensboro. Ky., sawmill operators, developed an interesting idea in connection with a display at the "Made-in-Owensboro" exposition held the last week in October. A mountain chalet was made of log slabs with the bark on, the roof being covered with autumn leaves. The interior was finished in native hardwoods, forty varieties being represented. The display attracted wide attention.

Louisville was represented at the recent red gum conference in Memphis by Harry E. Kline, superintendent of the Louisville Veneer Mills. Mr. Kline does most of the log buying for the local concern, which is prominent in the manufacture of figured gum veneers and panels.

Nov. 6, arbor day in Kentucky, was celebrated particularly at Frankfort, addresses being made by the Governor and others. The arboretum, planted at Frankfort last year, was shown to be in a flourishing condition, containing about 120 varieties of trees native to Kentucky. It is one of the few establishments of the kind in this country.

State Forester J. E. Barton has appointed most of the men who will be used as patrolmen in connection with protecting the forests from

You Know Something About the Land of Last Supply

You know, of course, that the nearest source of adequate lumber supply are the forests of the west, the inter-mountain pines and the fir, spruce, cedar and hemlock of the Pacific Coast.

In a broad sense, we are at the beginning of an era of

Competitive Demand for Western Timber

Mills of the South are exhausting their supply and are seeking new locations.

Timber is disappearing from the market, but not so rapidly now as it will on a constantly increasing scale during the next decade. Every tract taken off the market decreases the supply and increases the desirability and value of those remaining.

The best go first. Investigate now.

James D. Lacey & Co.

Timber Land Factors

Chicago, Ill., 1750 McCormick Building Portland, Ore., 1104 Spalding Building Seattle, Wash., 1009 White Building nre during the dauger period, which will end about Jan. 1. He has secured the co-operation of large mine operators in eastern Kentucky, and they will maintain patrols for the same purpose. A forestry association is to be established shortly in Rowan county by leading timber owners.

____ < ARKANSAS >-----

The old Garctson-Greason hardwood mill at Kilgore, Ark., which has lain file for several months, will again be put in operation in a few days. A new manager has been placed in charge, and the machinery is being repaired. This plant is located on the Prescott and Northwestern railroad, about two and one-half miles west of Blevins. It is thought that it will be ready for operation in about two weeks.

That Harrisburg, Ark., is to have a new cooperage plant is now assured. Bott Brothers, who operate cooperage plants at Alexandria, Mo., and Warsaw, Ill., and who also operate a stave plant in Harrisburg, visited the last mentioned town recently and made a proposition to the town wherely Bott Brothers would establish an up-to-date cooperage factory at Harrisburg if the citizens of the town would raise a certain sum as a bonus. The bonus has been raised, and it is now assured that the new plant will be built and operated.

On Oct. 28, forty suits were filed in the Outchita County Circuit Court against the T. S. Grayson Lumber Company of Finns, Outchita county, Ark., charging the mill with having violated the ten-hour labor law by compelling its employes to work eleven hours per day. The suits were filed by Deputy Prosecuting Attorney L. B. Smead, who will be assisted by R. K. Mason, attorney for the mill employes. The pennity prescribed by the law is a fine not less than \$25.00 and not more than \$200.00 for each offense. T. S. Grayson, president of the company, states that if he has violated the law it was through ignorance. Attorney Mason states that the main purpose of the suits is to stop the practice of overworking the men.

There now seems little doubt that the strike which was made by the members of the Coopers' Union at Paragould some weeks ago will soon terminate in a complete victory for the manufacturing employers. The employes went on the strike to obtain recognition of their organization by the plant owners, not having any kick to make against wages, hours and treatment. This demand for recognition was denied the union, and the plants were temporarily closed down. J. C. Clary, commissioner of labor statistics of Arkansas, and his deputy, M. J. McMahon, went from Little Rock to Paragould in an effort to settle the difficulty. The strikers finally reduced their demands to the recognition by the companies of a grevance committee, which should at all times handle the grievances of the employes. Even this was refused by the plant owners, who declared that they would remove the plants from Paragould before they would deviate in any manner from the manner in which they had operated the plants before the strike.

About the hardest and the most telling blow that was dealt the employes came last week when a statement was given out over the signatures of some fifty or sixty business men of the town in which the strikers were condemned in the matter, and declaring that those business men would not loan money or extend credit to the strikers further. It is believed the men will go back and that the plants will be operating as before within another week.

=≻ WISCONSIN **≺**==

The Success Stave and Heading Company, Athens, has been incorporated with a capital stock of \$15,000. William L. Erbach, William C. Klann and A. C. Rietbrock are the incorporators.

The Rusk Box and Furniture Company, Hawkins, has filed an amendment to its articles of incorporation increasing its capital stock from \$17,000 to \$35,000.

The Quinlan Timber & Log Company, Soperton, has been incorporated by M. J. Quinlan, John V. Quinlan and H. E. McGraw. The capital stock is \$50,000.

The Ventilated Closet Seat Company, Wausau, has been incorporated to manufacture principally a new patent closet seat. Max Tisch, F. O. Crocker, Samuel Livingston and others are interested. Capital, \$15,000. Work has been started on the new plant of the recently incorporated

Manifowoc Church Furniture Company at Waukesha. Reinforced concrete will be used throughout the building, which will be 60 by 400 feet in size. The concern is operating a temporary plant.

The latest achievement of the Forest Products Laboratory at Madison is a commercially successful process of drying wood for vehicle stock material. The kiln has been perfected and is being used to dry wood to be used by vehicle manufacturers. In curing wood by artificial heat, manufacturers have never been successful because uneven drying caused checking, warping and other losses. Many woods which possess qualities for vehicle construction are discarded because they can not be successfully dried. Many of the discarded timbers are now being successfully used in vehicle construction after drying in the new humidity regulated kiln. The variety of woods which can be used will be increased as the kiln is perfected. The new process will aid all manufacturers, particularly those using expensive timber. The initial cost of curing by the new method is slightly in excess of that of the old process, but the saving in material will more than offset this increased expense of curing. The laboratory recently succeeded in making wooden shingles fire-resistant by the use of chemicals and is now

working on reducing the cost of operation of the process which cost litteen dolars per thousand. Both of the processes when made commercially available will be of immense importance to the lumber trade

The Racine Stool Manufacturing Company, Racine, is making improvements to its plant to double its capacity and take care of the ever increas-A new power plant is under construction and will be equipped ing business. with two 150 hars power boilers, a modern engine and a new generator,

The Sawyer-Goodman Company, Marinette, is about to start up the No. 1 mill which was closed for some time. Two new boilers have been installed and a new resaw, which will increase the output, is being placed. The

additional power is needed for the resaw.

The Automatic File & Italex Company, Green Bay, is erecting a large addition which will provide for 6,000 feet of additional floor space. The oulding is of frame construction, covered with sheet iron, and measures 40 by 50 feet. It will be two stories and basement. Additional machinery will be installed. A new dry kiln and furnace room were recently completed. A vencer department is being considered and will probably be installed in spring

The Menasha-Neenah Lumber Company, Menasha, is rushing the work of crecting its new office and large lumber sheds adjoining the North-Western tracks at Commercial street. The sheds will be arranged to form a hollow

square, and will have a large capacity.

The Kaukauna Lumber Company, Kaukauna, is awarding contracts for erecting a new mill to replace the burned structure. Work has been starfed on the concrete foundation by a local contractor. The building will measure 64 by 80 feet and be one story high. White sandstone, brick walls, concrete floor, steel truss and composition roofing will make it absolutely It will be completed this month.

The Edward Hines Lumber Company, which owns 500,000,000 feet of timber near Winter, Wis., has opened several camps in that district. Over 200 woodsmen have been placed at work. The logs cut this winter will be decked and left until it has been decided at which mill they can be sawed into lumber most advantageously.

William Merik has opened a woodworking shop in the old Pankratz mill building at Sturgeon Bay and will manufacture various kinds of wooden-

ware articles and cabinets.

The Merrill Woodenware Company, Merrill, is erecting a new fireproof dry-kiln just south of the factory. It will be 25 by 105 feet, of concrete and tile construction, with tile roof and iron supports. The company Is enjoying splendid business. The plant will probably not be closed down for repairs this year as these were taken care of during the summer.

The Badger Basket & Vencer Company of Burlington has requested the Business Men's Association to extend the time for first payment of the plant occupied by it and erected by the association. When the concern located in that city five years ago the association furnished the funds to erect the plant. One-third of the amount was to be repaid within five years and the remainder at the end of seven years. Because of improvements contemplated, such as a new veneer drying plant, additional shed room, sprinkler system for fire protection and additional machinery, the company asks to have the first payment deferred until the entire amount is due. The company is now progressing nicely and is continually increasing its capacity and the number of employes so that the business men are confident that their money is safely invested.

The handle plant of L. S. Barber & Sons, at Butternut, is about completed and ready for operation. A concrete structure, 42 by 100 feet, has been completed and the machinery is now being placed. A feature of the drive is having the shaft and pulleys under the floor and bringing the belts through it to the machines, thereby eliminating much danger to the workers. Broom handles will form the first product, the capacity being

about 7,000 daily. Other lines will be added later.

One of the strangest cases that has been brought before the Wisconsin Industrial Commission is that of a claim of the administrator of Nils Nilson against the John M. Kaiser Lumber Company of Eau Claire. The memorandum on a report blank reads: "The death of Nils Nilson, employed by the John M. Kaiser Lumber Company, Eau Claire, was caused by a porcupine derailing a handcar." Nilson was employed by the lumber company and was riding on a handcar with three others. The car hit a porcupine and threw the men off, Nilson being killed instantly when his head struck a tie. The administrator has filed a claim. A brother and sister of Nilson living in Norway are dependent upon the deceased for support, it is claimed. A legal battle doubtless will be fought in which the activity of one porcupine promises to play a leading part.

Lumbering circles are interested in the announcement of the new railroad company, the Minneapolis, Merrill & Marinette Railway, which has been formed in northern Wisconsin. A line will be built from Merrill east to Antigo and from Merrill north to Athens. It will provide additional facilities for the many lumber concerns in that section, as it will

pass through many of the large timber tracts.

George H. Buckstaff, retired lumberman, Civil war veteran and former state senator from Winnebago county, passed away at his home in Oshkosh recently at the age of sixty-seven years. Mr. Buckstaff was a native of Canada and came to Wisconsin in 1850. With his father and brother he was interested in lumbering for some time before the Civil war. After his return he was interested in the Buckstaff Brothers & Chase lumbering concern for twenty years. The business, which confined its operations principally to the Wolf River district, was wound up in 1887, and Mr. Buckstaff retired because of ill health. He is survived by a son, George E. Buckstaff, one sister and a brother, all of Oshkosh,

Kraetzer-cure

TRADE MARK

- ¶ Kraetzer-Cured lumber is susceptible of being thoroughly air dried or kiln dried in less than one-half the time ordinarily required for seasoning unsteamed wood.
- ¶ Kraetzer-Cured lumber does not caseharden, check, end-split or stain, and dries without warping or buckling.
- ¶ Kraetzer-Cured lumber has a uniform tone of color. Its working qualities are greatly improved, and the beauty of the flake on quarter-sawed stock is enhanced.
- ¶ Kraetzer-Cured lumber dries out to materially less weight than unsteamed wood, ranging from 200 to 500 pounds per thousand feet.
- ¶ Kraetzer-Cured lumber will neither shrink nor swell, and the grain will not raise when water stains are employed in finishing.
- ¶ Kraetzer-Cured lumber is not impaired in strength or quality by the process.
- ¶ Kraetzer-Cured lumber eliminates all glue-joint troubles and "will stay where it is put."
- ¶ A list of manufacturers of Kraetzer-Cured lumber will be supplied on application.

Wesley Wells, aged forty two, son of A. R. Wells, and a nephew of John W. Wells, Menonimee Imberiman, was killed on Oct 31 at Whitelsh, Mont, when his automobile was struck by a train. Wells was in charge of the Somers Lumber Company at Kalispell. The body was brought to Menonimee for Interment.

A report from Catawba states that one of the largest and most Important deals in the history of that place was made when the saw and planning mills of the Red Birch Lumber Company were disposed of to the Beyer-Morner Lumber Company of Prentice. The deal includes the sawmill, planing mill, machine shops, lumber sheds and all the land occupied by the extensive plant. The Beyer-Morner Lumber Company has been engaged in the lumber business at Prentice for many years. C. G. Beyer, the senior member of the firm, owns and operates a mill at Worcester station, just north of Prentice. The Beyer-Morner company has large timber holdings in the vicinity of Catawba and will undoubtedly bring many of the logs to the newly acquired mill to be manufactured into lumber.

=≺ ST. LOUIS >=

Juring the mouth of October the receipts of lumber at St. Louls were 18,030 cars. In October last year the receipts were 16,295, or a gain during October this year of 1,735 cars. Shipments of lumber by rail last October were 11,310 cars. This October the shipments were 11,998 or a gain this year of 658 cars.

Frank Liebke of the C. F. Liebke Hardwood Mill & Lumber Company reports that he received a big shipment of ash a few days ago. This shipment, approximating one million feet, will be sawed by the St. Louis mill. The company is now operating its mill fourteen hours a day in order to catch up on orders.

W. W. Dings of the Garetson-Greason Lumber Company is in Chicago on business this week. Before leaving he said that business was quite satisfactory. The company's mills in the South are all running but some time has been lost on account of the scarcity of logs that it could not get to the mills from the woods because of heavy rains. This year the rains have been heavier than for many years.

E. W. Blumer, sales manager of the Lothman Cypress Company, recently returned from a selling trip. He said conditions in the East, where he has been traveling, were quite good and lumbermen were very optimistic over the prospects for the fall.

E. H. Luchrmann of the Chas. F. Luchrmann Hardwood Lumber Company reports an improvement in business. He is well pleased with the volume of business now being done. A great many inquiries are coming in, the principal demand being for oak and gum, with quite a lot of ash being sold.

W. E. Barns, E. C. Robinson, S. H. Fullerton, C. A. Antrim and C. E. Jennings have been appointed delegates to the Fifth National Conservation Congress to be held at Washington, D. C. on Nov. 18-20.

The Hardwood Market

— < CHICAGO >=

Locally the condition is not satisfactory, but it can be safely stated that nothing has developed during the last week or ten days that could be used as an indication of any condition that would justify unusual apprehension. The local trade has been promising itself an early renewal of activities and it is disappointed in the postponement of return to normal conditions. It is very probable that local lumbermen will have to prepare themselves for further disappointment in this line, although the local trade is not justified in assuming an unusually pessimistic attitude. Orders have been hard to get and when they are secured they are not of entirely satisfactory proportions. These conditions mean, however, that the securing of business requires greater effort, but it unquestionably is there for the right man to secure.

Local wholesalers are complaining somewhat on account of the close adherence to a satisfactory level of values on the part of northern millmen. They say they cannot realize a fair profit from transactions in northern stock. It is to be hoped that this condition of sale will eventually affect the state of mind on the part of the trade which prevails with the operators themselves. The price-cutting method has not evidently developed any further than it had several weeks ago, although most of the hardwood stocks being offered in the local market are below what they should be worth.

—≺ NEW YORK >=

The hardwood market is still moving on a small volume of business. The much-looked-for improvement has not yet materialized and some of those who were most optimistic a few months ago are turning the other way. This does not mean that there has been any bad break—prices have been well maintained,—but a little more snap to the market would work a vast difference. Reports are that stocks at mill points are not large but dealers here do not seem to fear a shortage. The volume of business does not exceed that done in September. Poplar is in fair call but chestnut and gum are slow.

=≺ BUFFALO >=

The hardwood trade has been rather quiet of late, with sales largely in mixed cars, in which a number of woods are moving in tairly good shape. The test do in is so or October made a tair showing with most yards, though some found it less than a year ago. Stocks here are in quite good assortment and the tavorable location of the market makes it a favored locality with eastern bayers, who for the most part are anxious to get the lumber delivered to them very promptly. There is very little tendency to buy stocks ahead. Prices are generally holding steady.

The demand covers about the usual woods, with oak holding a prominent place. It does not bring quite the strong figures of a few months ago, but lately there has been much steadiness to the market. Quartered oak is not moving very fast, but the upper grades are doing quite well, and the prediction is made that before very long it will take the place of such expensive woods as mahogany to a large extent. Ash, birch and maple are among the best sellers and fair stocks are moving. Poplar is not doing much, except in the lower grades, where the demand is good.

=≺ PHILADELPHIA >=

Reports from the hardwood trade vary according to character of sales, and although there are signs of weakening in values in some lines, prices on the whole are well sustained. Furniture factories and most of the other wholesale consuming industries continue busy, with favorable outlook as to winter trading. Buying, however, is still conservative. Building work has advanced somewhat but the bulk of the extensive work planned probably may not materialize until the money market is easier. Local yardmen are all relying mainly on their stock and evidently looking for lower prices, a change which does not seem imminent judging from the reports by those who have recently toured the mill districts. Many of the eastern cities are in the throes of desperate local political struggles, which, combined with the alarming Mexican situation and the much discussed currency bill in Congress, are having a disturbing effect on the commercial and financial market. The conservative merchant does not dare predict a return to settled normal conditions before next spring at the nearest.

Among the hardwoods oak, both red and white, continues unchanged from a fortnight ago. In high-grade chestnut there is a slight improvement of late, and No. 3 common sound wormy chestnut has been increasingly active; poplar in most grades is stronger; there is no change in basswood; high-grade ash is scarce and in good call; birch and beech hold steady place; there is no weakening in hickory; mahogany and veneer are firm.

=-< PITTSBURGH ≻=

Hardwood matters are in very good shape here considering the big slump in prices of other lumber stocks, noticeably yellow pine and hemlock. Hardwood prices are holding firm. Oak is bringing the best price for years. Medium-grade hardwood needed for piling and railroad operations is selling at a good figure. Furniture demanded is lighter than some time ago but prices hold well. Low-grade hardwood is being cut, especially in mining stocks. Demand, however, is big along this line so that the size of the orders helps to make up the deficiency in price. Hardwood mills in Tri-State territory are running nearly or quite to capacity and stocks are not piling up to any great extent. Yard trade is falling off, due to the close of the season. Some trouble is reported in getting cars on branch line railroads.

=====< BOSTON >=

There has been very little change in the market for hardwood lumber. The cutting up trade is using a fair amount of lumber every week, but so far as demand goes, the average buyer is making purchases in a very conservative manner. There are some buyers who believe that the firm and high prices of the past few months cannot continue much longer, but the reports from dealers who have visited the producing centers of late indicate anything but weakness. Some of the largest manufacturers of hardwood lumber report that they have been doing a little larger business of late. Stocks of desirable lumber at mill points are very small as compared with past seasons.

The demand for plain oak holds good, but from some places the offerings have been a little larger. Quartered oak is very firm with a good demand from most buyers. The call for birch and maple is fairly large. Brown ash has been attracting a fair demand. Offerings are not large and prices hold firm. There is some talk of a car shortage but so far lumber dealers say that their shipments from the mills have been delayed very little on this account.

=≺ BALTIMORE >=

It does not appear that the hardwood trade has made any special headway during the past two weeks. As far as surface indications go, decided quiet prevails, though the members of the trade somehow always manage to come out fairly well at the end of a given period. It is much the same with prices, which fluctuate to some extent and reflect the uncertain feeling in the trade. The movement should have been decidedly active by this time, but as a matter of fact, the sellers never feel quite sure just where the business is to come from, though in the end the orders ultimately turn up and maintain the average fairly well. Whatever the

OAK BUYERS

Increased timber supply makes us one of the largest oak producers in the country.

¶ Our white and red oak timber is of a quality that enables us to guarantee to properly meet your requirements for anything in this line. We can supply large quantities, running strongly to 14′ and 16′ lengths—a good proof of the character of the timber.

¶ We are ready to cut red or white, quartered or plain, 3/8" to 8/4", and will carry in stock a complete assortment of all thicknesses.

¶ All our lumber is made with the most perfect machinery obtainable—band saws used throughout our mills.

¶ We pride ourselves on the character of our edging, trimming and piling, which insures straight, cleanly-made lumber, uniformly dried.

¶ In these days of quick shipment you are interested in prompt delivery. Our extensive organization and facilities from the tree to your yard, place at your disposal the most perfect lumber delivery service in existence.

¶ We would like to explain further why we can please you, and if you are in the market for anything in southern hardwoods now, would appreciate your writing us today.

^{*} Indicates stock dry enough to ship within 60 days; remainder of items ready for immediate shipment. The item of Core Stock is a special grade, suitable for veneering over. This is thoroughly dry and we are prepared to quote an attructive price.

All Red and Sap Gum in grades of No, 1 Common and Better is Kraetzer-Cured, insuring the lumber to lay straight and flat and to be absolutely, free from stain. Kraetzer-Cured lumber is of a soft mild texture and uniform color.

We have facilities for kiln drying and surfacing. Oak timbers, switch and cross-ties, car stock, bridge and crossing plank, we specialize on.

VIEW OF MILL SKIDWAY, WITH PART OF LOGS STORED IN BACKGROUND—WE HAVE 6,000,000 FEET OF SELECTED HARDWOOD LOGS STORED ON OUR MILL YARD.

trouble may be that keeps the trade in a state of uncertainty or even of apprehension, the cause is not in any way associated with the direct demand for hardwoods, our must be looked for an another direction. There can be little doubt that the unsettling effect of the tariff, followed by the currency discussion bear nucle, if not all, of the responsibility for the unsatisfactory state of affairs. With leading bankers making very pessimistic predictions in case the currency bill becomes a law, and with the power of the government to impose its will upon Congress so plainly manifested in the tariff act, it is not surprising that hardwood men, along with all others in business, should held back.

Notwithstanding all these drawbacks, the inherent strength of the hardwoods cannot be entirely overshadowed. It shows itself in the continuance of a good movement at price levels that encourage the millmen espec-The producers state that they have been able to lay aside smaller stocks than usual against the deficiency of the winter, and they are not in the least disturbed over the prevailing state of affairs. In the main the quotations are acceptable, and while items here and there show measure of recession, no real slump is to be noted in any direction. The interest in stocks shown especially by buyers in the North keeps up, and a very considerable number of orders has been taken. It does not appear that the aggregate of the movement is smaller than that for the earlier portion of the year, and at least in point of quantity hardwoods make a good showing. Oak has eased off in some of the grades, with chestnut a little lower, while gum and basswood are among the relatively active sellers. The export situation is still affected by the high ocean freight rates, which exceed the advance the foreign buyers are willing to make on stocks, so that the exporters are still handicapped. Meanwhile, however, stocks on the other side are being reduced, which is desirable and promises well for the future. In the main the tone of the export trade is improved.

— ⟨ COLUMBUS >=

The hardwood trade in Columbus and central Ohio has been fairly active during the past fortnight despite the approach of the semi-annual inventory period. Both factories and yardmen are buying and the volume of business is pretty evenly divided between the two. Prices generally are well maintained and the outlook for the future is not considered bad at all.

One of the worst features of the trade is the increasing car shortage, which is delaying shipments somewhat, especially on some of the southern roads. Even worse than the car shortage, however, is the lack of motive power and terminal fatilities which is delaying the movement of the equipment on hand. The effect of the car shortage is to maintain prices where other conditions might tend to decrease them.

Factories engaged in manufacturing furniture, implements and vehicles are the best buyers of hardwoods. Automobile concerns are buying the wide sizes of poplar faster now. Dry stocks in the hands of mill owners are light which tends to maintain prices. Retailers' stocks are also light and the policy of yardmen is to buy only what is desired for immediate needs.

Oak, both quartered and plain, is strong and the volume of trade is satisfactory. Both red and white oak are selling readily. Chestnut is also strong, especially sound wormy. There is a better demand for poplar, especially the lower grades. Basswood and ash are in good demand and other hardwoods are unchanged.

---≺ INDIANAPOLIS ≻=

There has been a fairly active demand for hardwoods during the last two weeks, the only discouraging feature being the fact that automobile concerns have not been buying to any extent. Automobile companies throughout the city and state are suffering from lack of working capital, due to credit limitations placed by banks. Four automobile companies now are in the hands of receivers.

Furniture and vehicle manufacturers report an excellent business, equal to, if not better, than that of this time last year. Hardwood prices are holding their own in this locality and while there has been some inconvenience from car shortage, this has not affected the trade seriously.

==< MEMPHIS **>**=

The hardwood market continues steady but the volume of business is a little disappointing. The demand in some lines is active but general buying is not aggressive and lumber is not moving as freely as was antici-There is a free movement in the lower grades of cottonwood and The box factories continue to do a large business and their needs are quite full, with the result that prices are well maintained. There is likewise a good call for the lower grades of oak which are also bringing relatively good prices. Offerings are not heavy. The upper grades of oak have not eased much as to prices but the demand is only fairly active and the movement is but moderate. Sap gum is moving well and prices are held firm. Red gum shows a better tone but no actual advance has followed the recent conference held here. However, the disclosures made at this conference regarding the comparatively small stocks on sticks have caused holders to go a little more slowly in offering their red gum. Much interest attaches to the adjourned meeting of red gum manufacturers to be held here Nov. 15, at which time a permanent organization will be effected and it is expected that steps will be begun at that time looking to a decidedly broader market for this wood.

Ash is selling well in all grades. Cypress is going all right in shops

Mahogany and Circassian Lumber & Veneers

¶ The largest assortment of finest figured Mahogany Logs, Lumber and Veneers in the country can be found at the Chicago plant of C. L. Willey.

¶ We are just in receipt of fifteen cars of remarkably superior Circassian Walnut Logs, large size, well-figured and of good color, which are now being cut into Veneers.

¶ A visit or correspondence from discriminating buyers of all varieties of fine Imported and Domestic Cabinet Woods in Lumber and Veneer is solicited.

¶ You will not only find the Willey warehouses well stocked with a superb collection of Circassian, Mahogany, Vermilion, Black Walnut and other fancy foreign and domestic lumber and veneers, but buyers are assured of prompt and painstaking service, and a quality of product not usually obtainable.

¶ To visit the plant take Blue Island Ave. car at the postoffice to Robey Street.

and there is a fair call for selects but the upper grades are rather slow. Export business is quite up to the average for this time of the year. The car situation is interfering comparatively little with lumber deliverles.

=≺ NASHVILLE **>**=

The hardwood situation in the local market has shown some improvement the past week. There is a good demand for both plain and quartered oaks. Ash and hickory come in for numerous calls. The low grades of poplar are selling, while chestnut is selling in only moderate way. Although business is not up to the greatest expectations of members of the trade, it is of sufficient volume to keep the mills in this dis-trict running at about the usual capacity. The box business and flooring trade are about up to the normal.

—≺ LOUISVILLE ≻———

Though the election played a comparatively slight part in influencing business this year, the lumber trade has picked up somewhat as to sentiment, at least, as the result of the passage of Nov. 4. Business men invariably feel the effect of the election activity, which results in public attention being distracted from business to the matter of current interest. and with this factor out of the way trade should be quick to resume larger proportions. Business is not so active at present as hardwood men would like to see it, though it is probably true that the demand for oak, ash and other woods used in factory work is more active than for softwoods, the principal use of which is in construction operations, as this class of work has been slumping for some time. Quartered white oak is the one best bet at present, quartered red being in small supply and plain oak being less active than heretofore, though a good quantity of all grades is moving. Low-grade poplar is active, and sound wormy chestnut is well cleaned up. Cottonwood is selling well, and ash continues

=≺ ST. LOUIS **>**=

The local hardwood trade has been fairly good during the past few weeks. The majority of the orders have been small but they made up in the aggregate. The consumers are buying in a hand-to-mouth way, getting only what they absolutely need for immediate requirements. Reports from the South are to the effect that the weather in that section has been exceedingly bad for logging and sawmill operations. The heavy rains have put the woods in very bad shape and have compelled suspension of operations because there was no available timber on hand for cutting. The larger mills have fared the best in this respect as they have had logs in their yards, but if the weather continues as it has for any length of time, their supply will be exhausted also. From present indications there will be a serious shortage of timber in some sections before the late fall and early winter rains give way to severe cold weather. Stocks in the hands of manufacturers are of fairly good proportions. They have more dry lumber on hand than they have had for some time, but as this is in strong hands, it will probably be held for better prices. Plain sawed white oak, red quartered oak, choice red gum and ash are in moderate demand. Poplar is more active than it was and cottonwood shows improvement. Prices are more firm.

=≺ MILWAUKEE ≻=

The hardwood market is somewhat firmer, due evidently to the fact that stocks, in some instances at least, are getting into strong hands. Business is beginning to ease up somewhat, due to the fact that building operations are not quite so active. Wholesalers, however, feel that trade will be fairly good from now until about Christmas, when conditions will be dull until after the first of the year. Stocks in most lines are light and this is expected to keep the market steady.

News from the northern Wisconsin lumber country say that logging operations are opening up on a larger scale than usual and that the output will be heavier this season. The lumber business has been good during the past season and stocks have decreased to the point where it will be necessary that most of the lumber companies saw more logs this winter.

The local sash and door and interior woodworking concerns are inclined to buy carefully and are placing orders only for what lumber they absolutely need. Stocks on hand at all these plants are light and a good business is bound to develop from this source later in the year. furniture manufacturers are getting some good orders, and most of these people are buying rather liberally. The farm implement plants all over the state are entering upon an active season and are in the market for hickory, ash, oak and other hardwoods. Business with the farm implement people has been good throughout the past year and the output at all the factories will have to be much larger in order to meet the demands of jobbers and retailers.

Building operations in Milwaukee during the month of October showed a slight gain. About 362 permits were issued, representing an investment of \$1,214,638, as compared with 423 permits for buildings to cost \$1,187,766 during the corresponding period in 1912. Building Inspector Harper is confident that the high record of last year will at least be attained before Jan. 1.

Maple, birch and elm seem to be in leading demand among the northern hardwoods. More maple for flooring purposes than is arriving in the local market could be utilized just at the present time. Plain and quartered oak and ash are holding the top among the southern woods.

band mill. Timber consists of N. C. pine, cypress, poplar, gum, oak and ash. Mill is 8 ft. Filer & Stowell, complete, with 2½ miles R. R. Price \$135,000. Write for particulars. This is the biggest bargain in the South.

J. P. MULHERIN, Augusta, Ga.

MISCELLANEOUS

OAK, POPLAR, ASH

and all other hardwoods, in all grades and thick nesses, can be readily seld if advertised in the Wanted and For Sale section of HARDWOOD RE-ORD. If you have a large stock you want to sell try a few lines in this department and see what a lot of inquiries they will bring you

For sale by HARDWOOD RECORD, 537 S. Dearborn St., Chicago, Ill. 50 CENTS EACH.

The Logical Location for Wood-Working Factories

With the scarcity of timber in your locality and the ever increasing demand for higher wages among employees, doubtless you find it difficult in your present location to realize the profits you once made.

If you are manufacturing furniture, carriages, automobile parts, barriels and boxes, crates or any product that requires wood, the Southeastern States of Virginia, North and South Carolina, Georgia, Florida, Alabama, Missispipi, Tennessee or Kentucky offer numerous excellent openings for any of these lines of business. The greatest supply of oak, gum, ash, walnut, hickory, pine and other timbers are obtainable in nearly every section of the Southeast.

Power is furnished at very reasonable rates

Power is furnished at very reasonable rates while labor is plentiful at a very favorable wage scale. Labor troubles are practically unknown in the South.

Along the Southern Ry., Mobile & Ohio R. R. and Georgia Southern & Florida Ry. are many cities and towns offering liberal inducements for the location of new industries. We can put you in touch with these parties if you will express a desire.

GIBSON TALLY BOOK

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets— $4\frac{1}{4}x8\frac{3}{4}$ inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket. Gives large area of four tickets for compli-

Gives large area of four tickets for complicated tallies, or straight grade can be made on one page.

Accommodates any form of tally ticket desired.

Special, patented, triplicate tally tickets supplied, printed on waterproof paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability-covenience, accuracy, and for systematizing the inspection and measurement of lumber

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

ADDRESS DEPT. "L"

D. ACKLAND & SON, LTD., WINNIPEG, MAN., CANADA

HARDWOOD RECORD is a different kind, and altogether better lumber newspaper than has hither to been published. This is made possible by the loyal co-operation and support of the hardwood element of the lumber industry. If you are a subscriber you will agree.

American Forest Trees

"AMERICAN FOREST TREES" is a comprehensive work of more than seven hundred pages, illustrated by more than one hundred full page pictures of forest types of tree growth, and hundreds of minor pictures.

It answers every question worth asking about the infinite variety of forest growth in this country, and the utilization of these woods in lumber and other forms. The opinion of an

expert on this work is:

"AMERICAN FOREST TREES" is the foremost contribution that has ever been made to American forest and lumber literature.

The price of this work is Six Dollars (\$6.00) net. It will be sent on receipt of price, prepaid, subject to return and refund of payment if it does not prove satisfactory.

The very complete character of this work may be judged by the index following:

Westinghouse Motors form the Reliable Drive for Wood=Working Plants

A FTER Westinghouse motors are properly installed in a wood-working plant, the only attention they require is an occasional cleaning, inspection and lubrication. Beyond this, there is nothing to be done.

They are ready to start any moment they are wanted and they keep the machines they drive in continuous operation until the power is shut off. They are very rarely out of commission for repairs. Their life is very long; some of the first Westinghouse motors are still in successful operation.

Such reliability is the result of long experience in design, thorough study of operating conditions, and great care in manufacture. These factors combine to make Westinghouse motors more reliable than the service conditions, for which they are intended, require

Of course, like any other machines, these motors must be properly installed. Westinghouse service takes care of this detail by giving full information on the installation of Westinghouse motors in any plant.

To receive full assurance of motor reliability, specify "Westinghouse Motors."

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.

VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak. We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you,

Veneers and Panels with a Reputation

WE manufacture Veneers in all the native woods and for all purposes. Also Built-up Panels in native and foreign woods—three and five-ply—and have established a reputation for furnishing high-grade material. Send us your inquiries and orders and become one of our satisfied customers.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the lest evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free

The T. Wilce Company

Review and Outlook

General Market Conditions

CONSERVATISM IS THE KEY-NOTE of lumber buying at present in all classes and varieties of lumber. In southern pine, of course, the condition can be said to be more than conservative, and in fact, decidedly slow, but in hardwood the former description describes the situation accurately. The most pessimistic note seems to come from the East, where are located several prominent exporting centers, this tone being the reflection of poor conditions prevailing in all stocks of export shipments. This condition is a reflection of two causes abroad, one being over-stocks in British markets, an in fact in markets generally throughout the continent. This overstock condition is the result both of easing of demand and of overshipments. In Germany, where a considerable market usually lies for American lumber products, the economic crises which that country has been passing through on account of recent conflicts has resulted in a scarcity of available funds and a general letting up in business activity. It is encouraging, however, to note that in no case is there any tendency to consider the situation as of a panicky character, there being simply the same feeling of conservatism that is apparent pretty much all over the United States.

In this country there has been very little change since the last report two weeks ago, with the exception that sawmill operators in the Memphis territory and all through Arkansas are in a much more favorable frame of mind regarding log supply, as the opening up of excellent logging conditions means that they will be able to keep their mills running in good shape. In fact, there are very few shut-downs due to a scarcity of logs, those mills which are down being stopped because of a necessity for overhauling and general repair work.

It continues to be a fact that nowhere at the mills either north or south is there any too much lumber, and also because of the fact that buyers have been going slowly, stocks in consumers' hands continue to be of moderate proportions. In spite of this condition, however, the general run of hardwood stocks is not selling up to normal market values, even oak being shaded somewhat. This may not be the result entirely of reduction in the total consumption of hardwood lumber. The conservative buying that prevails, resulting in the placing of small orders, means that hardwood firms must necessarily put more effort into the securing of each order, and while the aggregate amount of lumber moved might be pretty near to normal conditions, the result of this strenuous seeking of business means that salesmen are more apt to shade prices than they would be if the same amount of lumber were moving in a smaller number of larger orders.

As stated, oak is off in some quarters, although it could be truthfully said that this condition prevails more with the weaker houses than it does with the bigger manufacturers of sufficient strength to

hold their prices. In fact, some of the big oak mills of the country are realizing consistently satisfactory prices for their lumber.

Gum has felt a slight stimulation on account of the recent organization of gum manufacturers and the facts which developed at the recent gum meetings showing that gum stocks are not in as serious a shape as had been thought. Following the first meeting there was a more firm tone noted on quotations on red gum, but this sentiment did not crystallize into any uniform shape until after the formal organization of the association and the outlining of plans for improving the gum market. The lower grades of red and sap gum are in a more favorable condition than they have been, while sap gum generally speaking, is slightly stronger.

With but normal stocks prevailing at northern mills, and in fact in some cases stocks below normal, no particular apprehension is felt in those quarters although there are rumors of quite a little price buying in northern hardwoods.

The general business situation continues to be affected by various political causes, chief among them being the rather slow progress and unsatisfactory status of legislation looking toward the making over of the currency system of the country. The banking element continues to maintain its hesitant position regarding money loaned, and as a result collections continue to be poor, and industrial and speculative departments are held back.

The imminence of the semi-annual inventory season is also having some effect on trade, and this can be said as truthfully of lumber, and probably more truthfully than of almost any other commodity.

On the whole the general indications are that business men are simply marking time until they are able to more fully analyze the prospects for 1914, and shape up policies which will be in conformity with conditions and circumstances that will prevail at that time. The conditions which probably are causing this uncertainty more than anything else are the matters at Washington relative to legislation, the uncertainty of the Mexican situation, the lack of definite ideas as to how the recent changes in tariff will affect business in this country, the proposed general advance of freight rates, which would mean raising the prices of all commodities, and the general disposition to hold up pending some definite information as to how the many new policies and ideas as advanced by the administration at Washington will eventually pan out.

Landed at Last

THE COVER PICTURE which illustrates this number of HARD-DD RECORD may not suggest the title, but the fact is well expressed, because the abnormal trunk now growing on land once stood in water. The tree is the mangrove. The picture was made in South Florida. Many mosts begin their lives at water and end them on land, but to a plants do t. The morgious is an exception; but it is the exception only in exceptional cases. Ordinarily the mangrove is a water tree. It is planted in water, grows from a seed designed by nature to take root in the bottom of shallow water; and millions of the trees roan the low shores in southern Florida never stand anywhere but in water. They fringe the dismal shores of ponds and banks of rivers in dense masses, rising usually from ten to twenty feet above the water's surface. The trunks under such circumstances range from one to four inches in diameter.

Their branching habits are peculiar, and resemble those of the banyan tree of India, though mangrove and banyan are not closely related. After the stem has obtained its start and has developed a small crown of branches, aerial roots put in an appearance. These spring from the branches and hang down like rope ends, slowly increasing in length until their tips touch the mud at the bottom of the water. There they anchor. A single small tree may have dozens of such roots, each an inch in diameter and ten feet or more in length. They look like slender props placed to sustain the tree's limbs. The shores of some of the tidal estuaries in South Florida are so thickly fringed with growth of this kind that it is almost impossible to make a landing from a boat. These fringes often stand in water from one to three feet deep.

When the trees increase in size they are apt to careen, and the tangled mass then defies efforts of man and of most animals to penetrate. The stems are stronger and more elastic than the toughest hickory. In time of storms, waves sometimes sweep in from the sea and beat and maul the mangrove thickets for days, and scareely a branch or trunk is broken.

The mangrove is a land builder. The thickets collect sediment and drift, and in course of time the water is displaced and the thicket stands on land which is dry most of the time. The tree is not in the least discommoded by the change. In fact, it usually grows faster after it gets out of the water. The largest trees are on land, and they quit sending down roots from the limbs; but those already established continue to grow. Some of them attain diameters of several inches, while the main trunk grows to a diameter of two feet or more. The picture shows such a tree that has been a long time on land and has outgrown most of its aquatic habits.

Mangrove wood is exceedingly heavy. Dry logs rolled into water sink like stones. This adds to the tree's value as a land builder; for when trunks fall they do not float away, but sink to the bottom where they assist in collecting sediment and debris, and the mass gradually rises above the surface of the water to form flats and islands.

Destruction or Conservation

A WRITER ON WOOD TURNING couples this statement and advice: "In the wood turning business there are but two grades, good and poor. Send to your customers the good grade, to your fireman the poor."

If the manufacturer of products of the lathe were the only person concerned the policy might be good from his selfish standpoint, for it would raise the price of his output. The prospective buyer who could not afford to pay the price could go without the article; but this is not in accord with the spirit of conservation which now is abroad in the land. Forward-looking lumbermen and all wood manufacturers are trying to lessen the activities of the waste burners at their factories. It is devoutly hoped that the time will speedily come when the smoke of the burner will ascend no more, and when the last board-end, the last truckload of shavings, and every shovelful of sawdust can be put to some good purpose, with profit for all who handle them. The tendency is to decrease, not to augment the profitless ash heaps when fire has burned the waste from wood-using factories.

It would be pretty hard at this day to go back to the custom once prevalent in white pine sawmills where the best went to market and the rest went into the river or into the fire; yet that is what is advocated as the policy of wood turners. It has been demonstrated many times that some industries can make money from materials which others throw away. Progressive manufacturers are searching

for means of earrying such utilization still further. If there are buyers for turned stock of low-grade material, such material should be sold then, and not burned. It is a short-sighted policy which would destroy part in order to get a better price for what is left. The better plan is to devise means of getting profit on all. This usually results when one industry uses all of its material that will pay, and turns the remainder over to some other industry to convert into other commodities.

The Income Tax

THE INCOME TAX came so suddenly that little time was given the public to analyze and comprehend its terms. It was a case of leaping first and looking afterwards, and the leap having been taken, the business men of the country are beginning to look. The prospect is not reassuring, according to an address delivered a few days ago by Levy Mayer before the Chicago Association of Credit Men. He declared that when the income tax has been added to the taxes levied for state, county, and municipal purposes, the total rate will exceed that of any European country whose people are loaded with taxes to support enormous standing armies, and navies of corresponding size.

The law is clumsy in construction, bewildering in its details. Lawyers are uncertain of its meaning, and cannot intelligently advise their clients on certain questions which have already come up. Decisions of courts will be necessary to settle points which ought to have been made so plain that any one could understand them. The more the law is studied after its enactment, the more apparent becomes the fact that it was not studied before its passage. It betrays the work of theorists who are always strong on generalities and deficient in particulars; who pile up deek loads totally out of proportion with ballast, and who put to sea without regard to storm signals.

Mr. Mayer suggests that there should be a department at Washington to draft and write the laws. Experienced men could at least formulate laws which could be understood and applied. One of the blunders of the income tax act has already become widely known; it relates to the tax on the income of married persons. The makers of the law supposed they were favoring marriage, but as a fact they discouraged that step by an extra tax on married people, both of whom have taxable incomes.

No protection is given in case of an absconding collector who runs off with his employer's money. The latter must pay the income tax on what he lost.

The analysis has just begun. Every day brings to light new crudities and eccentricities. In some instances, it is claimed, it will cost bankers two hundred dollars to collect twenty dollars tax from their clients and turn it into Uncle Sam's strong box. The government compels citizens to collect this tax without pay. In some instances it would be cheaper for them to pay it out of their own pockets than to try to collect it. It is a similar case to that in Irving's Knickerbocker History where the judge ordered each litigant to give the other a clear receipt, and compelled the constable to pay the costs.

There has been little or no opposition to the income tax on principle. The criticism appears to be directed wholly against the kind of law and the manner of its enforcement. It has been denounced as impracticable in its present form, and the only remedy seems to lie in amendments.

Another Convert

THE NEW YORK TIMES, in an issue of recent date, gives further evidence of change in sentiment on the part of the more intelligent and fair-minded editors of the daily press regarding the justice of substituting the steel car for wood. This issue contains an editorial entitled "After Steel Cars—What?" The article quotes from the Sague report on the use of steel cars in the United States for diminishing fatalities as follows: "It must be acknowledged that the wheel weights now being used upon both cars and locomotives in the United States are so great as to be entirely without precedent in railroad history, and the combination of speed and

heavy wheel weights, together with the extremely severe track conditions frequently met in winter operations in this country, often produce conditions which are most difficult to meet."

The editorial then comes out point-blank with the following statement: "This means simply that steel cars not only fail to prevent railway accidents,-in the nature of things, they could not prevent them,-but because of their weight causing rails to spread and break and the difficulty of stopping the heavier trains in emergencies, they actually increase the danger of collision and derailment." The editorial then goes on to outline wherein the railroads are weak and to point out the real cause for the many fatal accidents on the railroads of this country. It says that steel cars are a poor makeshift and cannot replace the vigilance, loyalty and devotion that should be demanded of the railway operatives. It is needless to say that with the proper attention given to these conditions the ratio of accidents in this country would soon be reduced to such a low figure that the public would have no special interest whatever in the type of cars in which they were riding and would not make the extravagant and foolish demands which they are reported to be making. which, if ultimately granted on a general basis, would mean the entire replacement of substantially built wooden cars by another type of car concerning which there is absolutely no proof of its right to

A Questionable Policy

T IS REPORTED THAT MANUFACTURERS of furniture and other similar articles in which veneer is utilized have decided

that their best interests are not served through the use of the word "veneer" in explaining the construction of their goods. It is claimed by these people that the use of the word "veneers" gives to the public mind the impression that there is something shoddy in the construction of the article in question, and that it will not stand up to the test of time, and that it is really but a poor imitation of something that ought to be better.

Having convinced themselves of this fact, they announce, it is reported, that they will endeavor to substitute for "veneer" the words "reinforced wood," contending that veneer is really reinforced wood in

that the piano, table top or other article in which veneer is used is really made of several layers of veneer, one reinforcing the other. This, of course, is true, but it is extremely doubtful if the establishment and maintenance of such a policy will be of any benefit to them or to the furniture manufacturers and other handlers of furniture, and it is practically certain that it would be anything but a benefit to manufacturers of veneer. If such a plan really exists, it would seem that it would be to the best interest of the veneer and panel concerns of the country to investigate in order that their products may not be forced to sell under false colors before the eye of the general public.

It is true that with the average individual the word "veneer" is synonymous with "inferior quality," and in fact this word has become established as an expression for almost anything which, while it appears all right on the surface, is really not of much real value. That a properly constructed panel is really stronger in many cases than the solid lumber, and that the employment for face panels of high-grade veneer offers a much greater variety of figure, is too generally recognized among those interested in the handling of lumber and veneers to need any argument, but evidently the public has not come to realize that this is true, and it is certainly not a good thing for the veneer trade to let this misconception continue or

to allow without protest any such campaign as is suggested that will rob veneer of its identity,

Veneer is coming to command more and more popularity, but such popularity should be founded on a proper understanding of its value, purpose and apphention and not upon any false pretenses such as are being \$1.22 sted as above noted.

Important Precedents Established

A DECISION WAS RENDERED on November 17 b. S₁, all Master J. C. Wallace in the famous Arkansas reparation case at Little Rock, Ark. The decision stated that the consignee is entitled to the relate for excessive freight charges and as a result manufacturers and wholesalers have entered formal appeal to the federal court. However, the special master will be unable to file a complete list of settlements. Hence there is no probability of the case being ready for the appeal for some little time.

About \$300,000 will be paid back to the consignees on the basis of this decision, unless an appeal is sustained. This is the amount of excess freight paid, which constitutes about one-third of the amount of the statute rate, which continued in force while the injunction of the railroads against the state rates was pending.

The question of reparation was brought to an issue with the filing of a plea of intervention to collect rebates on shipments made by the Wisconsin-Arkansas Lumber Company of Walco, Ark., on shipments within the state. At the same time the East Arkansas Lumber Company, one of its consignees at Paragould, Ark., filed a similar plea of intervention, in which it claimed that the consignee was

entitled to a rebate.

The decision as rendered would establish the fact that shipments in transit are the property of consignee, and that the real price of an article was the price f. o. b. mills to which the amount of freight to any destination was added.

The court held that the consignee was not only the owner of lumber while in transit, but really paid the increased rate on it at the increased price of delivery. This condition, according to the decision, was not affected by the fact that mills in some instances made concessions which amounted to absorbing part of the amounts themselves, the court ruling that in this case they acted on their

By M. J. Walirich, Pres.

own volition, not being compelled to make such concessions.

Are You Aware

THAT THERE IS USED in the United States over six times as much wood per capita as is used in Germany and over twelve times as much per capita as is used in England, and that we are using in this country today about twice as much wood per capita as we did fifty years ago?

These figures might appear somewhat of a surprise to the lumber trade in view of the much lamented increase in the use of substitutes for wood for various purposes. The lumber trade has been rather startled by the remarkable progress made in the field of wood substitutes and, being fully alive to the situation, is preparing in various ways to combat its progress. We should not figure, however, that because we use six times as much wood as they do in Germany per capita that we possess any more complete understanding of the workable qualities of wood and its adaptability to different uses or that the lumbermen of this country have been any more progressive in marketing their product than have the lumber producers of Germany and England.

As a matter of fact, it is all a question of economics, and it may be said that these figures have some significance as an indication of a possible condition to prevail in the future. The use of any commodity is dependent upon its adaptability for specific purposes as combined with its relative value as compared to other commodities of equal adaptability.

The fact that but one-sixth of the amount of wood per capita is used by the Germans does not necessarily indicate that those thrifty people could not secure more wood if they wanted it, but rather that they have found substitutes which serve their purposes and which they can secure at a less cost. The use of other materials than wood, such as stone and brick, in house construction in Germany does not signify that that type of architecture is specially preferred, but rather because of economic consideration it is the style of construction best suited to the purpose.

It is a well-known fact that native-grown lumber in Germany commands excessively high prices as compared to lumber used in this country produced from our native forests. Also, the cost of importing foreign grown lumber, added to the value of the lumber itself, means that the ultimate cost of foreign lumber to the German consumer is high. The whole question, however, really hinges on the fact that domestic lumber within the boundaries of the German empire is not plentiful and hence commands a high price. It is not likely that conditions such as exist in Germany today will exist in this country for a good many years to come, but that we are working toward that same end is undoubtedly true. Therefore the logical course to follow would be the employment of more detailed merchandizing methods looking to the gradual increase in the closer utilization of our trees and more detailed attention to specific lines of consumption for different grades and varieties of lumber in order that each grade and kind of wood may be put to the use for which it is best adapted, thereby insuring the fullest possible profit to the lumber trade. This condition will come about as a gradual evolution, and it is encouraging to note the tendency even now shown on the part of American manufacturers to put such methods into practice.

An Intelligent Safeguard

THE BROADCAST ADVANCES in freight rates which the railroads announce and which have been generally suspended by the Interstate Commerce Commission pending investigation have undoubtedly had some effect in retarding the placing of orders for shipment during the next few months. The fact that the increase would mean advance in price of from five per cent up in selling price of lumber has unquestionably resulted to a degree at least in effecting a more hesitant spirit on the part of the buyers who desire shipments some time after orders are placed. This uncertainty as to possible change in value in various commodities has made necessary the employment of such means as will successfully overcome this excuse on the part of the buyers for further holding off in their purchases for 1914. In this connection a prominent Wisconsin firm has evolved an idea which appears to be most excellent.

This company is now stamping all quotations for delivered shipments with the following words: "On account of pending advances in freight rates this quotation is based on present rate of --- cents per hundred pounds for prompt shipment and subject to any increase of rate on acceptance for deferred shipment."

Seeking Independence of America

LONDON TRADE PAPER rejoices in the prospect of extending Russian railways into the Caucasian timber region in order to bring out logs to supply some of the markets of western Europe. It is claimed, "Europe would be rendered more independent of America for mahogany and walnut." It is not easy to see in what way the mahogany supply will be affected by the building of railroads into the mountains of western Asia, since not a stick of mahogany grows in that region. Neither is it apparent how there can be competition with America in walnut, because the kind of walnut growing in Caucasia is not found in America. The Asiatic species is the Circassian walnut which has never been an active competitor of black walnut of American growth, because of the great difference in cost between the two woods and also because of difference in color. If there is to be serious rivalry between woods of Caucasia and those of the United States, the competition will lie between Circassian walnut and red gum. Though the later is much cheaper than the walnut from Asia, the figure schemes of the two are so similar that a considerable quantity of the wood passing as Circassian walnut is red gum from Tenessee, Arkansas, or some other southern state. No matter how many new railroads are built into the timber regions of Caucasia, there is no possibility of bringing out enough walnut to have an appreciable effect on the quantity of red gum sold in Europe. There can be no competition in price, and as to figure, the gum, if well selected, can hold its own any day and anywhere.

Car Statistics

THE AMERICAN RAILWAY ASSOCIATION in Bulletin 155A gives its usual figures on car surplus and shortage,

On November 15, 1913, the total surplus of cars as reported was 46,059, as against surplus on November 1 of 38,276. Comparison of figures for November 7, 1912, at which time the total surplus was 19,897 cars, would indicate that there is some little laxity in shipments this year as compared with November of last year. This suggestion is more or less borne out by comparison of shortages, as on November 15 of this year there was a shortage of 23,407 cars. as against a shortage of 71,156 cars on November 7, 1912. On November 1, 1913, the shortage was 40,118 cars.

Where Were the Lumbermen?

DAILY CONSULAR REPORT contains an account of a build-A DAILY CONSULAR REFORM Contains and ing exhibit which was held at Glasgow, Scotland, the early part of October. The report says that the exhibit was very elaborate and embraced almost every conceivable article required for construction and fittings of almost every class of building. It is interesting, then, to note the description of the various materials and appliances noted. This description starts out with concrete mixing, concrete blocks, brick machines, drain and pipe cleaners, and the different kinds of instruments used in surveying and mapping work. Under the head of building material are listed marble, brick, cement and ornamental interior finishing of mosaic and cement work. Then come the plumbing exhibits, embracing all the latest and most modern plumbing supplies. The next exhibit was of interior finish, and, according to report, included electric and gas devices for heating, stoves, ranges, private telephone apparatus, carpets, rugs, matting, draperies, and, finally, at the end of the list, furniture,

It is significant that the only mention made of any commodity in any way related to lumber was the one word "furniture." It would seem that the members of the lumber fraternity located in Scotland are even more remiss than their American brothers in the matter of adequately exploiting their products, for, while American lumbermen have been rather delinquent as to adopting modern methods, it would seem that the Scottish lumbermen overlooked an opportunity that confronted them, whereas the members of the American trade have simply not had the opportunity and heretofore have not created it.

Important to Northern Operators

ON THE OCCASION OF THE RECENT MEETING of the Michigan Hardwood Manufacturers' Association R. S. Kellogg, secretary of the Northern Hemlock & Hardwood Manufacturers' Association, made the interesting observation that the tendency on the part of northern operators would be to hold very firmly to prices during the coming year because of the fact that there is promised an increase in logging costs of from twenty-five cents to one dollar a thousand. It is probable that the reason for this is two-fold. On the one hand the lumber jacks are demanding and receiving better wages then ever, and on the other hand they are actually being housed and fed in comparative luxury when are considered the conditions under which the lumber jack existed in former days.

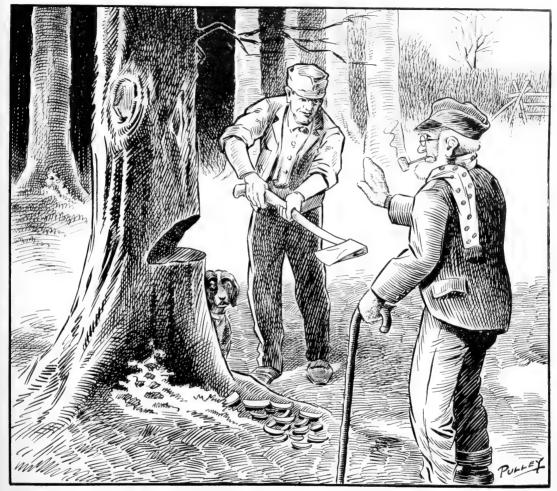

In addition to this the various necessities for logging operations have gone up in price proportionately. That the seriousness of the situation is understood and that it is realized that steps must be taken to effect some sort of a favorable change is seen in the fact that sometime during the present month there will be a conference of representatives of loggers in Michigan and Wisconsin, who will get together at Green Bay.

E. GARY, TURRELL, ARK., SECOND VICE-PRESIDENT

🗱 Red Gum Manufacturers Organize

Following the first gathering of prominent manufacturers of red gum which took place at Memphis several weeks ago, it was confidently predicted by those actively participating in the meeting that at the second meeting which was called for Saturday, November 15, at the Hotel Gayoso, Memphis, a permanent organization would be perfected. That the predictions of these men have proved correctthat such an organization is now an actual fact-can rightly be the cause of considerable satisfaction to the gum interests of the country. The formation of such an organization, considering the importance of this most excellent domestic hardwood, and further con-- sidering the extremely unsatisfactory conditions which have been prevailing in its market for some little time, has come to be deemed an absolute necessity. With the increased facilities which will be furnished for gathering statistics as to condition of stock supply, reasonable values, specific information as to treatment and uses and proper methods of publicity, the condition of the gum market should be very materially improved during the next few years.

As stated, the meeting was held at Memphis on Saturday, November 15. There were in attendance between fifty and sixty men prominent in the manufacture of gum lumber. The various proposals and reports of committees were well received, and while the entire attendance was not secured for membership, those hesitating about signing their names were held back not because of non-belief in the possibilities and good to be derived from the association, but by other conditions that made it necessary for them to postpone such membership.

The meeting was called to order by temporary chairman W. E. DeLaney of the Kentucky Lumber Company, Cincinnati. J. W. McClure of the Bellgrade Lumber Company, Memphis, was temporary secretary, elected at the first meeting, and the session opened with a reading of the minutes of that meeting by Mr. McClure.

Following Mr. McClure's report, M. B. Cooper read a report of the attendance committee. Mr. Cooper read the names of 700 gum producers who were invited to attend the session, and stated that the object has been to secure the small operator for membership, as well as the large operator.

Following Mr. Cooper's talk, cards were passed around on which were listed the amount of gum produced by each manufacturer present. These cards when handed in and the information tabulated, developed the fact that the production of those in attend-

ance aggregates about 154,360,000 board feet of sap gum, and 71.054,000 feet of red gum, making a total production for those present of 225,414,000 feet. It was further developed that 21,-341,000 board feet is used by manufacturers for their own consumption in boxes and various other ways. Additional information covered figures submitted by firms who were interested in the proposition, but were unable to attend. These figures developed a production of 3.788,000 feet of sap gum and 650,000 feet of red gum, a total in addition to above figures of 4,528,000 feet. There were represented at the meeting producers of 7,180,000 feet of gum lumber in addition to those listed at the first report.

Following the issuance of these statistics, the committee on by-laws reported. E. A. Lang of the Paepcke Leicht Lumber Company, Chicago, read the constitution and by-laws as framed by the committee appointed at the first meeting.

The name of the association is The Gum Lumber Manufacturers' Association, and its objects and purposes are to secure a full understanding of conditions surrounding the gum industry in the territory covered by mills operated by members of the association, and also to adopt such measures as will provide for improved methods of manufacture and marketing. It is also the purpose of the organization to disseminate such information as will tend to promote the general welfare of gum manufacturers.

The membership is open to any person, firm or corporation engaged in the manufacture of gum lumber, the initiation fee being \$25.

The dues are to be assessed by a committee, and to be paid in twelve monthly installments not to exceed fifteen cents per thousand feet log scale, based on the annual production of the membership. It is provided that the minimum dues shall be \$50. Power is given the secretary and treasurer to pass one or more monthly assessments when sufficient funds are in the treasury. The usual arrangements are made as to delinquents and resignations.

It is provided that a regular annual meeting for the election of officers shall take place each November, and that semi-annual meetings shall take place in May on due notice. The president is also authorized to call special meetings.

Article 5 of the constitution is devoted to the nominating of officers and the manner of their election and appointment.

Article 6 has to do with the holding of meetings. The board of directors has the power to hold meetings at such time and place as it may think proper, and to select a chairman of the board of

S. M. NICKEY, MEMPHIS, TENN TREASURER

I B ROBERTSON MEMPHIS TENN DIRECTOR

FOR GALD CHRISTON HIL DIRECTOR

directors, to appoint committees from the membership of the boatst of directors, or of the association; to receive money and dispose of same, and to devise and carry into effect such measures as it may deem proper. In case of vacancies in the directorate or in any of the official offices, same shall be filled by the board of directors at any meeting.

Article 7 is given over to the discussion of the duties of the various officers.

Article 8 specifies that the attendance at any regular or called meeting of twenty members of the association in good standing shall be regarded as a quorum.

Article 9 states that the board of directors shall be authorized to amend the by-laws, while article 10 concludes with the statement that the articles may be amended at the annual or semi-annual meetings of the association by a majority of the members present, but no amendment shall be considered at any such meeting unless written notice shall have been given to the membership by the secretary at least thirty days previous to such meeting.

The by-laws follow the usual form in connection with procedure of meetings and the administration of the officers of the association. They provide in addition that the president shall appoint standing committees with power to act subject to ratification of members at the next following called or special meeting, as follows:

Committee on membership; committee on assessments; committee on finance; committee on technical research; committee on complaints; committee on form of price list; committee on advertising; committee on entertainment.

Following the reading of the constitution and by-laws, they were taken up section by section, and discussed in detail.

While a discussion developed as to the amount of initiation fee to be levied, a \$25 fee was finally decided upon, as a larger fee would be apt to keep out the smaller manufacturer.

Another section that was discussed was that giving the committee on assessments power to assess members for money needed by the organization. It was finally decided to estimate the annual cut of each member and assess him what was deemed necessary, said assessment not to exceed fifteen cents per thousand feet log scale, and to be paid monthly in advance. This money is to be collected by the secretary and given over to the treasurer.

Another point brought out was the discussion of a \$50 minimum assessment of those whose estimated cut at the estimated rate would fall below that amount annually. It was finally decided that the cut should be based on log measure.

The constitution and by-laws were adopted as amended.

Leaders in the discussion as to various features of the constitution and by-laws were: S. M. Nickey, E. A. Lang, Thomas W. Fry, B. F. Dulweber, W. E. Heyser and C. L. Harrison. Following the adoption of the constitution and by laws, the next order of business was the signing of applications for membership, which resulted in the enrollment of thirty one members to start with

The committee on nominations appointed by temporary-chairman W. E. DeLaney, then reported. The following officers and directors were recommended:

Phase S. C. L. Housen, Himmoderler Harrison Lumber Company, three Girards, at Mo.

Phys., View Phys. 94 N. J. W. M. Clare, Bellgrade Lumber Company, Memphis, Tenn.

Second Vice Paismanns 1 H. Gary, Baker Lumber Company, Turrell, Ark.

Theast one S. M. Nickey Green River Lumber Company, Memphis. Tenn.

Directors were recommended as follows:

P. Robertson, American Tully Company, Memphis, Tenn.

F. R. Gold, Wisconsin Lumber Company, Chicago, III.

E. A. Lang Paopoko Loient Lumber Company, Chicago, Ill.

Thomas W. Fry. Charles F. Luchrmann Hardwood Lumber Company, St. Louis, Mo.

DIRECTORS FOR ONE YEAR

H. B. Weiss, George C. Brown & Co. Proctor, Atk.

M. B. Cooper, Three States Lumber Company, Memphis, Tenn.

L. P. DuBese, Lamb Pish Lumber Company, Charleston, Miss. W. C. Romor, J. H. Benner & Sens, Heth, Ark.

These officers and directors were elected as recommended.

President Harrison then addressed the meeting. He spoke of the object of the association and the various conditions which have led up to its formation. He dwelt upon the good to be derived, stating that the main benefits will be the establishment of uniform selling plans, a more staple and higher level of prices, and the general education of the consumer as to the value of gum. He then spoke of the necessity of having a competent secretary, dwelling upon the duties, necessary qualifications and the possibilities to be realized by the association from the employment of such a man.

President Harrison then reviewed the work done by the cypress and birch associations and went into detail as to the excellent results they had obtained. He pleaded for a close co-operation between the officers and the membership in order to develop the fullest efficiency possible for the association.

President Harrison was followed by the vice-presidents, J. W. McClure and F. E. Gary, and by Treasurer S. M. Nickey, and Director F. B. Robertson, all of whom spoke encouragingly of the possibilities of the new organization.

Following these talks the meeting adjourned.

The following standing committees were appointed for the ensuing year:

ASSESSMEN TO L. U. W. M. Ciure, chairman, E. B. Norman, M. H. Mossoo, E. A. Late, W. E. Hyde,

Expert View of Export Conditions

John L. Alcock, of John L. Alcock & Co., Baltimore, Md., returned last week from a six weeks' trip to Europe and talked interestingly about market conditions on the other side. He went over strictly for business and gave all of his time to a study of the situation in the different countries visited, which included the United Kingdom, Germany and France. Mr. Alcock is a close observer and his opinions, therefore, possess exceptional value. Speaking of the United Kingdom, he said that the trade was quiet, with prices relatively low because of large accumulations there. Stocks of lumber and logs had been going forward in such volume that the buyers had come to look for an easing off and had delayed placing orders in the expectation that this could be done on a lower basis. In addition, the requirements had not been especially large, so that the general effect was to depress values. Furthermore, American woods were encountering a greater competition from the woods of other countries. Japanese oak, Mr. Alcock found, was entering the British markets in increased volume and was held at prices that made it a serious competitor of American oak. It was of a good white color, singularly free from pin worm holes, and found much favor. The invasion by this Japanese oak would have to be taken into account by the American shippers in their calculations.

The trade in Germany had been and continued unsatisfactory, the demand being restricted and the buyers being indisposed to place orders. Germany had gone through something of a financial crisis within the past six or eight months. That country, Mr. Alcock explained, had financed the war of Turkey with the Balkan countries, which took larger sums out of the country, this money being withheld from other channels into which it would have gone but for the needs of the Ottoman Empire. Furthermore, the outcome of the conflict made it very doubtful if any of the loans would ever come back, thus further straining the resources of the country and causing the bankers to draw in wherever they could. Something like a real monetary stringency had prevailed in Germany, credits were narrowed and enterprises generally found themselves on short rations, so to speak. The buyers were not in a position to place orders for lumber with the same freedom as before, and the effect generally had been unfortunate. In addition, there is a large supply of logs in Germany. Mr. Alcock stated that while he was in Hamburg not less than 18,000 walnut logs were on the market, a number greater than almost at any previous time. More or less congestion also prevailed in other centers, and the outlook was anything but bright. In France, trade was better, and values had been less unfavorably influenced there than almost anywhere else. The improvement, however, did not exceed moderate proportions and left room for gain. Mr. Alcock spent a busy six weeks while away, but the frequent change of scene and other things proved of decided benefit to him, and he came back feeling in fine shape.

About the simplest way to increase the capacity of a single band hardwood mill making lots of boards is to add a resaw.

Some Fallacies of the Forest

ARTICLE ONE

Can a man find his way through a forest by noting the moss over trees and the roughness of the back?

Some men may do it sometimes, but no man can all the time. It is widely believed that this art is one of the first things the woodsman must learn, and that until he learns it he must be regarded as only an amateur in wood-raft, a sort of novice who has no business out of sight of blazed trails. Books that tell about pioneers on the wooded frontiers, and hunters in the pathless wilderness, are filled with allusions to finding courses by observing the rough sides of tree trunks, the moss, and the length of branches on one side of a tree, compared with the other side. This alleged forest lore has been repeated and ground in so long that by a sort of common consent people accept it as true.

There is just enough thread of truth in it to tie a little argument on the affirmative side of the question. A good many people are firmly convinced that travelers who know how can take their course any direction they please through the woods by following the signs of the trees. Generally this is not possible, but in restricted localities and under peculiar conditions it may be done.

The theory that the trunks of trees indicate the points of the compass is based on the supposed (not real) fact that the bark is always roughest on the north side of a standing tree, that there is always more moss on that side, and that limbs which grow toward the south are longer and larger than those on the north side. If this were true, a little skill and experience in interpreting the signs would be all that would be needed to enable one to travel in any desired direction through unbroken forest.

This cannot be done. The best woodsman, caught in a fog in a strange region where the features of the landscape afford no hint of directions, is liable to lose his bearings utterly. This often happens on a cloudy day when there is no fog. The experience of almost every woodsman whose acquaintance has covered extensive regions, will verify this. The rough sides of tree trunks have often failed in the time of need, and the moss and the long limbs were either not to be seen or appeared on too many sides of the same tree.

First, consider the rough bark. There is no question that bark is often rougher on one side than on the other, and the roughness appears to be due, in part at least, to a diminution of light on that side. The tree's side facing north receives less light than the south side, if other things are equal, and this has led to the assumption that the north side of a tree is roughest. The observation of a few instances where it proves to be so is apt to be accepted as settling the whole matter in the affirmative beyond the peradventure of doubt.

It was stated in the preceding paragraph that the rule will hold "if other things are equal." Right there is the key to the whole situation—the weak place in the theory. Conditions vary within the widest limits. Take for example a forest in the eastern hardwood region, where the woods occupy a flat or nearly flat area, and the forest is mature, the trees old. Here the tree canopy is even the light comes in regularly from the south, and falls on all trunks nearly alike. Such is an ideal situation, and a woodsman in that forest would probably be able to follow any desired course by noting the rougher northern sides of the trees. To that extent the theory might work.

Take a forest spread up and down the steep sides of mountains, deep in ravines, on the brinks of cliffs and ledges, and on level tracts. The roughest bark is found on any side of a tree, wherever shade is deepest. It may be on the south side, if a ledge or clump of trees cuts off the light, and an open space on the other reflects surrounding light in. This often happens, as any woodsman has noticed many a time if he has used his eyes. A tree in the edge of a thicket may get most of its light on the east, or west, or even on its north side, and the roughest bark would be on the most shaded side. The trunk that leans sharply nearly always has its roughest

bark on its under side, no matter whether that is east, west, north, or south,

Trees of a whole tract often lean sharply in one direction, due to the prevailing direction of the strongest winds. This is most frequent in regions exposed to sea winds, but it occurs also on mountains. Trees thus thrown out of plumb by prevailing winds develop rough bark on the sides opposite the wind, though that might be west or east as well as north or south. It is apparent that a woods man who should try to use the roughness of bark under these cir reumstances as a compass to shape his course, would box many a compass before he would reach his destination.

These are not all of the troubles likely to be met in attempting to maintain the theory that the rough side of the tree can lead any sure or particular way. Forests are not always dense. They are often so open that light falls on the ground abundantly. Try to put the theory into practice there, and note the result. Try it among the mesquite, ebony, ratama, and cat's claw along the Rio Grande in southern Texas. Search as you may, not one particle of difference in the appearance of bark can be detected on the north, south, or any other side of those sun-baked trees, unless a chance instance where some unusual condition prevails. The reason is (probably) that the whitish, semi-naked soil reflects so much light that the twisted and deformed trunks in the Rio Grande forest receive about as much light on one side as on another. It would, of course, be impossible to apply the theory there.

Test it at another point on the United States map. In southern Florida, in the same latitude as the Rio Grande forests, there are dense stands of hardwoods called ''hammock lands.'' Instead of an open growth like that of Texas, it is so close that few trunks are ever touched by the sunshine. They grow in perpetual shade. The result is the bark is the same on all sides. There are no rough and no smooth sides, and plainly no woodsman could shape his course by any such characteristes.

Examples might be multiplied. The dense forests of the northern Pacific coast have no more roughness on one side than on another. High mountain trees, where the exposure is great, are apparently not influenced in the least by southern exposure, though sometimes the bark on one side is much rougher than on the other, due, in many instances, to beating hail in time of storms. Trees on some of the exposed crests of the Sierra Nevadas and the Rocky Mountains have little or no bark on the sides where the prevailing winds have full sweep and drive hail almost with the velocity of bullets,

It is apparent, therefore, that no dependence can be placed in the condition of bark on trees to indicate any particular direction. Local conditions govern. No general law will apply. Some hunter, whose whole experience was circumscribed within a few miles, might have found out how to shape his course by the bark of trees in that particular locality, and woodsmen within bounds little larger might do it; but it is not possible that such limited experiences can be expanded into a general law applicable to the forests of a continent, or even to a single state without numerous exceptions.

The moss and the long southern limbs of the trees have not been discussed. Both are unreliable guides in striking a course through the woods. A good deal of what is called moss on tree trunks is not moss at all, but it is not necessary to stumble over trifles.

In some forests it is possible that a north and south course might be laid by noting the presence of moss on one side of the trunk and its absence on the other; but such an experience would be rare. The same laws govern it that control the roughness of the bark on a certain side of a trunk; but usually an additional factor must be considered—dampness. Moss will grow where moisture is right, without much regard to the difference between sunlight and shade. This makes moss even less reliable than bark as a guide. In a particular region where the habits of the prevailing moss is well known, it might be some help in laying a course, but outside of that district it would be useless.

Moss on trees is no more universal than rough bark is. Sometimes it exists, sometimes not. Where it is not found, it is, of course, unavailable as a guide in shaping a course, and where it is abundant it may be equally useless. In Louisiana the so-called Spanish moss covers the trees completely. There is no difference as to the sides of trees. North, south, east and west all get it alike. The same observation holds for the greenish-yellow moss that clothes the forests on some of the far western mountains. The points of the compass apparently have nothing to do with its abundance or scarcity.

In the northern and eastern hardwood regions—that is, east of the Mississippi river—many people refer to lichens as moss. In some localities these seem to prefer the north sides of trees, but in other places no preference whatever appears to be shown. A person who would guide his course by this sign would as likely as not travel toward every point of the compass in course of a day in the woods.

"Large limbs pointing south" are likewise a delusion. Possibly the limbs on the southern side of trees average a little larger than those on the north side, but the differences are so slight and the exceptions to the rules so many that no practical advantage can be taken of the fact, if it really is a fact. Limbs and tree tops grow and lean toward light and open space. If these prevail on the southern side, the largest branches will likely grow there; but open space on the north and thickets and shade on the southern side, will induce the largest limbs to develop on the north side. Any woodsman knows that if two trees grow close together with open

space all round, they will have few limbs on the sides facing each other, but long ones on the sides opposite. Points of the compass have little to do with it. Local conditions control. Frequently the prevailing wind has more influence than all other forces combined. If the prevailing wind is from the south, the longest limbs will point north, away from the noonday sun; if the wind is from the east, the dominant branches will point west. This is one of the commonest sights on the Atlantic coast, while on the Pacific coast in California where the full sweep of the sea winds strikes standing trees on their western side, their largest limbs extend toward the east. There is a certain mountain in California so situated in relation to surrounding mountains that its summit is swept almost constantly by south wind. The trees have scarcely a limb on their southern sides, but stand like flag poles, with what few branches they have whipped out towards the north like streamers. In the southern Appalachian mountains the abnormally-developed one-limb character of the Fraser fir attracts attention of most people who travel through the high regions where it grows. These uncouth, overgrown branches are liable to point in any direction-straight north as often as straight south.

It ought to be apparent, therefore, that it is time to revise someof the old-time misconceptions of nature's guideposts in the forests. If there is any sure way of knowing north, south, east, or west by reading signs on the trees, some one ought to have made the discovery known before this time.

Measurement of Shrinkage

It is a matter of common observation that wood shrinks when it dries, but not equally in all directions. Shrinkage is due to the fact that while the cell walls grow thinner in drying they shorten imperceptibly. Other things being equal, the thicker the walls of the wood cells, the greater their shrinkage, but this applies only to different portions or specimens of the same species and cannot be used in comparing unrelated woods. For instance Osage orange is one of our hardest, heaviest and densest woods, yet its shrinkage in volume from a green to an oven dry condition is less than half that of some of the hickories.

If one takes an exact cube of green wood so cut that two of the faces represent cross-sections, two radial, and the other two tangential surfaces, and dries it out completely, he will find that while there has been little if any alteration in the length of the piece—that is, longitudinally or parallel with the fibers—the other dimensions have changed, the tangential shrinkage or in direction of the rings of growth being considerably greater than that along the radius—often twice as great. This is quite different from the behavior of a comparatively homogenous substance such as metal or concrete, and explains why shrinkage is so often followed by checking and splitting. Thus if one saws a complete section off the end of a green hardwood log and allows it to dry it will probably split to the center and in time a large V-shaped opening will appear. Upon subsequent soaking this cleft will close up. If shrinkage were uniform the section would merely grow smaller upon drying.

This question of shrinkage has a very important bearing on the use of wood. When squares are cut or staves made from green material it is necessary to allow for shrinkage, otherwise the final dimensions may be so small that the pieces will have to be culled. If wood once shrunk would remain in that condition one of the greatest ills of which wood is possessed would not exist. But the cell walls absorb water readily not only in liquid form but also from the air. Wood dried at high temperature "works" less than air-dried material, even after it is brought back to an air-dry condition. No matter to what degree of dryness wood may be brought in the kiln it is important that at the time of manufacture it should contain approximately the amount of moisture it will normally have in use.

The U. S. Forest Service has made a great many shrinkage measurements in connection with the tests on the strength values

of woods. The results obtained are for use as average working values rather than the basis for detailed study of the principles involved. A common method of making the tests is to take from each bolt two specimens one inch thick, four inches wide and one inch long. They are taken close together so that the results from the two will be comparable. One of the specimens is cut with its width in the radial direction and is used for the determination of radial shrinkage. The other has its width in the tangential direction and is used for tangential shrinkage. The specimens are carefully weighed and measured while in a green condition; they are then airdried and afterward oven-dried at a temperature of 212 degrees F., until a constant weight is obtained, when they are again weighed and measured.

To determine the shrinkage in volume the test specimens are submerged in water both before and after drying. The exact amount of water displaced by the blocks is measured, and corresponds to the volumes of the material. In the following table the results of the measurements on twenty hardwoods are given, the species being arranged in the order of their volumetric shrinkage beginning with the greatest.

SHRINKAGE IN VOLUME OF TWENTY HARDWOODS FROM GREEN TO OVEN-DRY

	CONDITION			
		Volume, er cent.	shrinkage,	Tangential shrinkage, per cent.
1.	Big shellbark hickory (Hicoria laciniosa).		7.7	13.2
2.	Pignut hickory (H. glabra)	18.2	7.2	11.6
3.	Mockernut hickory (H. alba)	17.7	7.7	10.9
4.	Swamp white oak (Quercus platanoides).	17.7	5.5	10.6
5.	Yellow birch (Betula lutea)	17.0	7.9	9.0
6.	Shagbark hickory (Hicoria ovata)	17.0	7.2	10.6
7.	Beech (Fagus americana)	16.5	4.6	10.5
8.	Post oak (Quercus minor)	16.0	5.7	10.6
9.	Slippery elm (Ulmus pubescens)	15.5	5.1	9.9
10.	Black oak (Quercus velutina)	15.1	4.7	9.5
11.	White oak (Quercus alba)	15.4	5.3	8.8
12.	Basswood (Tilia americana)	14.5	6.2	8.4
13.	Sugar maple (Acer saccharum)	14.3	4.9	9.1
14.	Hackberry (Celtis occidentalis)	14.0	4.2	8.9
15.	Red oak (Quercus rubra)	13.8	4.0	8.3
16.	Sycamore (Platanus occidentalis)	13.5	5.0	7.3
17.	White ash (Fraxinus americana)	12.6	4.3	6.4
18.	Tupelo (Nyssa aquatica)	12.4	4.4	7.9
19.	Osage orange (Toxylon pomiferum)	8.9		_
20.	Honey locust (Gleditsia triacanthos)	8.6		_

Regarding Black Walnut

The average householder, the home builder, or the passet by glancing casually into the modern show window of the up-to-date department store sees in the attractive and oftentime beautiful interior decorations the handsome pieces of furniture, the luxuriously faced piano, or in the highly artistic window ornamentation merely a beautiful exposition of something which for all he knows might have grown from the ground or fallen from the sky in exactly the form in which he sees it. It is natural for us all to accept things as we see them. We board luxuriously appointed Pullman trains

BLACK WALNUT LOGS AND BUTTS ON YARD OF FRANK PURCELL OF KANSAS CITY, MO.

feeling that they have come into being somewhat in the nature of the various creations which Aladdin produced by a simple rub on his magic lamp. We accept all these things as our just due feeling that we of the twentieth century naturally merit all of the good things, conveniences and the luxury that are provided for us. And as a general thing we do not even stop to analyze the possible processes of production of the many beauties and comforts that we can enjoy or that are placed at our disposal.

This is probably true more in connection with the many beautiful and highly useful articles made from wood than of any other class. We are used to sitting in chairs when we wish to rest during the daytime, and to lie in beds when we want to sleep at night. We have always eaten our meals at tables and generally speaking have built our houses of wood, but we accept all these things merely as something which is simply there for us to use.

It should be interesting for the layman to delve into the many steps which have been passed through, for instance, in creating a beautiful bedroom suit made from mahogany, a handsome chair made of oak, or a beautiful dining room table of walnut. The average individual has absolutely no conception of the many sources of supply of these various woods, nor as to the manner or form in which they were gotten from the woods and turned into the raw material from which the finished article is made. He might have an exceedingly limited working knowledge of some of the processes going into the manufacture of furniture, but going beyond that into the manufacture of lumber or veneers, he is entirely at sea, and when you go even further and ask him what he knows as to the method of selecting the beautiful walnut and the mahogany in the logs, and the pains necessary in getting them from the woods.

he understands about as much of what you are talking as he would if you were discussing Perry's data issued in proof of his discovery of the North Pole.

Considerable has been written as to the way in which mahogany is gotten from the woods, the way the trees are located and felled, and the way hewn logs are gotten down to the waterways, and from there to the ocean. Very little has been said, however, regarding the painstaking work necessary in selecting the raw material and producing the beautiful pieces of furniture made of our own domestic walnut. Ten or fifteen years ago walnut in furniture, stair work and interior trim was considered the height of fashion and luxury, but possibly because of the inability of the wood finishers at those times to create the bright, cheerful finishes which the average home-builder now demands and possibly also to a degree because of the increasing prices of walnut, this most desirable wood gradually lost its popularity until up to a few years ago it commanded but a very small proportion of the prestige which it formerly enjoyed.

Of late years, however, considerable advancement has been made in the matter of finishing walnut. In fact, in a great many cases the old, sombre pieces of walnut furniture which when properly put together will last practically forever, have been brought down from the attics and refinished with the modern idea of cheerfulness, and bright beauty in mind. As a result, a more complete realization has come as to the possibility of creating a renewed demand for household articles made from this wood dressed in its more modern attire.

Furniture manufacturers, piano men, and those contracting for

SOME HIGHLY-FIGURED BLACK WALNUT BUTTS ON YARD OF FRANK PURCELL, KANSAS CITY, MO.

handsome show window displays have been venturing further and further into the use of walnut with the proper finish, and in fact some of the productions of the highest type of furniture in Chicago and other markets are displayed more and more frequently in bed room suits, dining room suits and in fact in some cases in living room suits, made of walnut throughout.

The character of the wood used in the ordinary run of various types of household furniture does not necessitate any unusual effort as far as the selection and manufacture of the wood is concerned. As a general thing the logs are picked up by men and concerns who make a business of buying walnut logs in small lots and disposing of them to concerns who manufacture them into lumber and veneers For this purpose the ordinary run of plain walnut is used without any special regard to figure or curl. The wood used for this purpose is merely in the form of logs and is sold as such, and from them manufactured into lumber and veneers for furniture and similar purposes. However, there is a splendid demand which is never quite taken care of for this wood in the more luxurious form, and that is the wood with the beautiful mottle; the so-called figured and curly walnut which commands excellent prices and is highly thought of for all character of high-class cabinet work. In fact it is difficult to find any character of wood growth which shows a more beautiful surface when properly finished than this highly figured curly stock. It is in this line of work that the walnut log men take the greatest pride. In fact it is necessary that these men have a wide and varied experience that they may make a success of the accumulation and disposal of curly and figured stock.

While the plain wood is gathered and sold merely in the form of logs, the curly and figured stock on the other hand is almost always secured from the sources of supply in other forms. The figure and the curl are the result of natural freaks in the growth and formation of the wood. As a general thing instead of being found in the logs, they are found in the stumps or in the "burls," which to the layman in the ordinary form present an appearance about as attractive as an ultra-mature tree toad.

The experienced walnut man, however, quickly determines whether or not such a "butt" as he calls it will develop figure or curl, when he has gone so far as cut the tree. He takes great pride in his ability to tell in a general way just what character of figure each stump that he selects will develop in the veneer or lumber. It is not to be inferred from this that the walnut man merely goes through the woods, looks at the walnut tree, and is able to ascertain exactly for what use it is best suited. As a matter of fact there are usually but one or two trees in every hundred cut which develop any figure worth while that will justify their being placed in the class of figured walnut.

The work of selection of figured butts is exceedingly tedious, and when the walnut man discovers one which he considers marketable, that is, a butt that shows that it possesses a strong suggestion of figure or curl, he has it shipped to his assembling yard. Here it is split and the bark and sapwood trimmed off pretty closely to the heartwood. In the figured stock the sapwood is of no commercial value. Various methods are used to preserve the butts after they have been prepared in this way to minimize checking and other deterioration. In this connection one of the oldest of the walnut asemblers of the country. Frank Purcell of Kansas City, Mo., says that after he has split and trimmed his butts he buries them in sawdust immediately, which procedure keeps them in a most excellent condition for an indefinite period.

The veneer manufacturer is a man interested in the purchase of these fancy butts, and as soon as he hears of any special offerings he makes a journey to the assembling yard and makes his purchases. The butts are then shipped to the veneer plant, where they are sliced up into the required veneer which is further matched up in the piano manufacturer's panel plant for high-grade piano facing.

As suggested, the proper selection of walnut in the stump is really more of an art than a cold-blooded business proposition. A man has almost to be born to this work and to pass through years of training in order that he may be able to recognize the beauty he is seeking when he finds it. There are not many men in this country who are able to produce in this way, and among the biggest handlers of walnut today, Mr. Purcell ranks probably as one of the most expert from whom the big veneer people buy their butts. In this connection are shown two photographs which do rather poor justice to some of Mr. Purcell's selections. The true beauty of the walnut butt is not developed to the eye of the average mortal until it is opened up in the form of veneer. Hence, the camera is a poor means of conveying to the average individual an idea of what a walnut butt really looks like. However, these illustrations will give an idea as to the manner in which these butts are treated after their arrival at the assembling yards in preparation for their further manufacture into high-grade veneers.

The Lumbermen's Round Table

ADVANTAGES OF SALESMEN

Houses which have assumed the somewhat heavy expense of sending traveling salesmen out on the road to sell lumber sometimes wonder, especially when business is coming in rather easily, whether it is worth while to maintain an organization for sales purposes in the field. But when trade is draggy, and when it takes real salesmanship to move the stock, the boys on the road are the very backbone of the business. If getting orders is like pulling eye-teeth, it's certain that the traveling man, coming into personal contact with the consumer, can come closer to achieving this difficult dental operation than the chap who has to depend on cold type for expression.

"I don't know what we should have done recently without our salesmen," said the head of a large hardwood concern recently. "Our mail business has fallen off to practically nothing, but in spite of this the men on the road are still sending in the orders. Right now they're our best asset."

THE OPTIMIST AND THE PESSIMIST

Everybody has heard the definition of the pessimist as the man who sees only the hole in the doughnut. That simply indicates that the way one looks at things determines the way things are—as far as the individual is concerned.

A lumberman sat in his office recently, chewing his nails and looking moodily at the rather cheerless outlines of his air-tight heater. "Nothing doing," he growled. "Never saw business so dull. I

don't believe anybody is cutting up lumber any more."

Just half a dozen blocks from him was another hardwood man, whose smile was not of the made-to-order variety. He looked cheer-

ful, talked cheerfully, and in fact was cheerful.

"Oh, everything is all right," he said. "Business is good with us. Sold seventeen cars last week, which is pretty good for a young house like ours. It's just a case of getting out and hustling for the orders, that's all."

Disregard the hole in the business doughnut and consider only the light and appetizing circumference. It's there, all right.

STUDYING OUTPUT OF LOGS

A sawmill man who has had more than average experience said recently that one phase of the business which is rather neglected is comparison of the results of manufacturing given lots of logs, not only as to footage, but grade.

"The only way to tell whether a bunch of logs was a good buy," he pointed out, "is to cut them up, figure the output as to grade and get at the value of the product accordingly. If the sawmill man fails to do that, he is never in a position to tell his buyer whether to go shead on purchase in a certain territory or whether he is to stay off."

The importance of this proposition is appreciated when it is remembered that the percentage of low-grade is constantly ascending, and that the millman must keep in touch with the changes in this respect, in the timber he is buying in order to know whether he can purchase at current rates and have a margin for profit.

That is to say, if records for one section for a certain period indicate that the mill is getting twenty per cent of firsts and seconds, sixty per cent of No. 1 and No. 2 common and the remainder lower grades, it is important to know whether those percentages still hold good on logs from the same territory.

THE LOG BUYER'S OBSESSION

"The trouble with most log buyers I have known," declated a hardwood manufacturer," is that they are obsessed with the idea that their worth to the concern employing them is determined by the quantity of logs which they buy. In other words, they are constantly striving to get footage, without regard to much else. The result is that the log man not infrequently purchases timber which the owner of the mill would have turned down. Poor judgment, you may call it; yes, but poor judgment induced by the overwhelming desire to make a showing in feet."

If it is true that the log buyer is obsessed with this idea, the only way to get rid of it is to make it perfectly plain that his compensation is to be fixed not with reference to the quantity of logs purchased, but altogether with reference to the desirability of the logs secured and the profitableness of those logs when put through the mill. Of course, it is hard to tell in advance whether an apparently sound log will cut up into good lumber; but, in general, if the buyer looked first to the question of ultimate profits, fewer lots of second-rate logs would be picked up at first-rate prices.

The trouble is, to be entirely frank, that the millman hires the log buyer to get material with which to keep his plant in operation, and finds fault if he doesn't do it. With this situation confronting him, it is quite natural for him to lapse into the error of putting quantity before quality.

THEORY VERSUS PRACTICE

One of the best known hardwood salesmen in the East gets most of his business, according to his friends, on account of his ability as a conversationalist and his knowledge of furniture design. He calls on a manufacturer, makes himself interesting, gives him a few ideas about styles he has picked up from reading or observation, and incidentally pursuades him to accept a carload or two of lumber.

This method has its advantages, especially from the standpoint of those who believe in "service," and in giving something other than

the goods in return for the business of the customer. But, on the other hand, it exposes the solicitation of the salesman of this type to attack from the man who gets down to brass tacks, quotes prices that look better than the other fellow's, and simply convinces the buyer that he should have the order.

"Give me first and foremost," said a lumberman, "the man who knows hardwoods, who can walk through a factory and see just what the consumer wants. The only way to please a customer is to sell him lumber he can use to advantage; and the theorist, who has had no practical experience at the business end of a rule, is badly handicapped in selling the stock of the hardwood lumber-yard."

DO THE INSPECTORS KNOW THE RULES?

The statement was recently made at a gathering of lumbermen that most inspectors, in the yards of sawmill men and jobbers, are not technically informed as to the grading rules. This sounded like a case of stretching the long bow at first, but the speaker went on to explain that he had tested the matter out.

"I went into the yard the other day," he said," and asked the inspector how he had graded a board he had just turned over.

- "' 'It's a No. 1 common,' he said.
- " Why? I asked him.
- " Why, I can just look at it and see that it is,' he said.
- "I found most of the other men the same way. They had a rough, rule of thumb idea as to grades, but when pinned down for a reason, they could not analyze the proposition and tell exactly why a given board was No. 1 common instead of a first and second or a No. 2.
- "After that I gave orders that the inspectors study the rules, stating that any one who failed to show proper knowledge would be fired. In a little while you could see them getting down and marking off the boards to figure cuttings, and studying the lumber from the technical standpoint. Such knowledge is absolutely necessary, and it is surprising to find how many men who are regarded as good inspectors are without it."

The White Man's Burden

Domingo L. Diaz, one of the forest rangers in the Philippine Forest Service, has taken up the "white man's burden" of which Kipling speaks, and is overseeing a large number of the unfortunate "twilight people," "half devil and half child."

In the United States the forest rangers deal with all sorts of wild animals from weasels to grizzly bears, destroying those that are harmful, protecting those that are beneficial; but the forest rangers in the United States have no wild people to look after.

It is different in the Philippines. The hardest part of the ranger's work there is often connected with the people who live in the woods. Mr. Diaz's work is along that line. He is responsible for the wellbeing of a thousand or more negritos scattered like rabbits through the woods. Centuries of warfare and cruelty under Spanish rule kept these people savage. They considered every man's hand against them, and they were against every man. The Spaniard's civilization, such as it was, never reached them, and the Americans, when they came into possession, took up that part of the "white man's burden," and they are trying to carry the burden with justice and humanity.

The following extracts are from a recent report by Ranger Diaz who finds himself in charge of scattered bands of these wild men:

"No form of local government has ever been enjoyed by these people and without some such form of organization it would be impossible for them to be protected against the injustices of the surrounding people and against their own vices and defects. These conditions aid not please the Secretary of the Interior and the Director of Forestry, for after the last visit of the first and the frequent visits by the latter, both being acquainted with the existing conditions among negritos, they asked me to take the necessary steps in the formation of a plan of government for these negritos.

"The officers of the Bataan forest were pleased to write a plan of government for them, under the recommendation of the Secretary of the Interior, which is being followed and no doubt will change the aspect of the deplorable situation of the tribe, opening to them a new era of moral and material progress.

"The form of government is essentialy paternal, and the man in charge of the negritos assumes many of the duties and powers of a government council. The principal object is to help the negritos in the establishment of a local government and to make them a self-supporting people. To carry out this work it has been considered best to first establish two schools where will be taught elementary agriculture, weaving and other convenient industrial work which will serve as a fountain of resource for them although special attention will be given to instruction in practical agriculture.

"It is planned to build the school house in the center of a twenty-five-acre tract of land which will serve as a nursery for plants which will be distributed to all the neighboring negritos and at the same time will be a garden where the students may do their planting, and grow such products as will be needed in feeding the students at school. In addition to this large garden, every family will be allowed to occupy and cultivate eight acres and with similar areas of other families will form the jurisdiction of a permanent settlement.

"A negrito with his family can clean and cultivate several acres of land and being planted with permanent crops such as coffee, pineapple, cacao, bananas or kapoc in combination with rice and corn, ordinary crops of a farm, their lands will become improved and the desire to seek a new home will be reduced to a minimum.

If the Philippine Bureau of Forestry can carry out the policy outlined the results in twenty years will amount to more than was done for the bushmen in three hundred years under Spanish rule.

The Export of Oak Lumber

More than forty countries, so ided in ad of the five continents into which the world is divided, receive oak fumber from the United States. In addition, the islands of Oceania draw supplies of this wood from America. The amount sent away from this country last year, to find markets in every climate of earth, was 222,266,000 feet, worth \$9,729,443.

No classes of oak are recognized in export statistics, as far as species are concerned. The broad divisions, white oak and red oak, are not even made; nor is account taken of dimensions. The bare fact is given that so much oak bunder is exported to such a country, and its value is shown.

It is a matter of common knowledge, though not found in statistics, that most export lumber is white oak; but there are a number of kinds. The most common white oaks in the export trade are the following: The common white oak which grows in the whole eastern half of the United States; post oak, which occupies practically the same range as the common white oak; bur oak, common in the morthern and central states as far west as Minnesota and Kansas, but not abundant in the South; overcup oak, known in the South as forked-leaf white oak; chestnut oak, found from New England to Alabama; cow oak, common and of good quality in the Middle South.

Probably most of the red oak that goes abroad is the common northern red oak, and the abundant southern or Texas red oak, though there are a dozen other species of red oak which are occasionally cut for lumber, and some of it may find its way abroad in small amounts.

The following table gives the exports of oak lumber of all kinds, but not oak logs or staves:

Dut not oak logs of staves;		
EXPORT OF OAK LUMBER	, 1912	
Destination	Feet B. M.	Value
Austria-Hungary	13,000	\$ 520
Belgium	31,548,000	1,284,778
Denmark	1,481,000	63,318
France	3,945,000	161,451
Germany	8,860,000	368,261
Italy	803,000	31,996
Netherlands	8,696,000	401,541
Norway	860,000	33,844
Portugal	42,000	1,865
Spain	1.338,000	52,740
Sweden	330,000	13,797
England	87.136.000	3,675,693
Scotland	8.432,000	375,910

The export of oak logs, round or hewed, is not included in the above figures. Approximately 2,000,000 feet of round oak logs leave American ports yearly for distant kinds, and a considerable, though unknown, quantity of hewed oak timbers. It is probable that the square timbers exceed the round logs. Of round logs in the export trade, oak amounts to only about one-third as much as walnut.

Little information is to be had concerning the uses to which oak lumber is put in foreign countries. It is evident that the uses are many, for the wood reaches so many ports that commodities must differ greatly. It is known that furniture, house finish, parts of machinery, vehicles, railway cars, and ships take much of the oak. Flooring is an important place filled by this wood in some countries; but its use as tongued and grooved flooring is not large. It is worked into parquet floors where woods of dark and light colors are cut to geometrical forms to produce patterns, borders, and the like. In such work white oak is used to contrast with dark woods like mahogany and teak.

American oak naturally meets with many rivals among the oaks of other countries; but the two most often in evidence are the Siberian or Japanese oak, and the European oak in England and on the continent of Europe. The Japanese oak is successfully competing in California, Washington, and Oregon with American oaks, because, on account of water transportation, it can be delivered at a lower price. The European oak passes in trade by several names, among them being English oak and Austrian oak.

This is the most stubborn rival that American oak encounters in Europe. It is a wood of splendid quality and of fine figure, but it is expensive, and so far as price is concerned, American oak can beat it in most foreign markets. European oak, when brought to America, costs from \$150 to \$400 a thousand feet, and the cost of similar grades in Europe are not much less.

Fine American oak can be laid down in the principal markets of Europe at half these figures, or less; and since it is the equal of the native oak in all essential characteristics, it is natural that it should crowd European oak from many places formerly held by that wood. Europe buys twice as much American oak lumber as all the rest of the world, and Canada is the next best market. England and Canada are the two best customers for this wood, and together they buy sixty per cent of all the oak lumber exported from the United States

Wood Imports and Exports for September

The imports and exports of forest products during September, 1913, are shown in the following lists which are abridged from statistics compiled by the Bureau of Foreign and Domestic Commerce.

tistics compiled by the Bureau of Foreign and Domestic	Commerce.
Imports	
Briar root and ivy	\$ 14,013
Spanish cedar 1,082,000 feet	58,454
Mahogany 7,339,000 feet	516,451
All other cabinet woods	138,827
Round logs 9.393,000 feet	96.823
Pulpwoods	982,879
Rattans and reeds	81,547
Other unmanufactured woods	41,964
Lumber 97,707,000 feet	1,872,049
Lath 67.528.000	185,181
Shingles	157,965
All other lumber	156.367
Chair cane or reed	56,836
Furniture	82,847
Wood pulp	1,951,646
All other manufactured woods

Lumber213,654,000 feet	5,080,697
Furniture	625,323
Total agrants	20 014 001
Total exports	00,211,221

Ontario's Wood-Using Industries

A very complete and well-prepared report has been published at Ottawa by the Canadian Government Printing Bureau on the wood using industries of Ontario. It was compiled by R. G. Lewis and W. Guy H. Boyce, under orrections of R. H. Campbell, Princetor of Forestry, and is supplemented by a summary issued some time ago, The industrial conditions and forest resources of Ontario are much like those of Minnesota, Wisconsin, Michigan, Olno, Pennsylvania, and New York, and for that reason the report should have particular value on this side of the international boundary. The certainty that the new tariff measure will pass Congress and receive the President's signature adds an interest to whatever our Canadian neighbors are doing in the line of manufacturing lumber or other forest products. There will be free trade in many articles and a reduction in duty on most of the others, and there is no doubt that trade will be turned into new channels in a number of particulars. Whether the Canadians will buy more from us than they have bought heretofore, or pay more for their purchases; or whether they will sell us manufactured articles or raw material more cheaply than we have been able to buy them in the past, remains to be seen; but in the meantime business men will study trade relations between the two countries with more care than has been customary in recent years. The breaking up of old trade habits is bound to cause new alignments.

The report recently published includes statistics collected from 1,200 firms engaged in various kinds of wood-manufacturing. Thirty-six separate industries are listed and are presented with considerable detail. The annual demand for wood aggregates 807,456,000 feet board measure, at an average cost of \$23.73 per thousand, and a total cost of \$19,161,384. Thirty-four separate species of wood are listed, besides numerous others which are considered as groups only. White pine, which apparently includes Norway pine, leads all other woods in quantity, and is twice as much as any other in total cost. The finest remaining stands of white pine in the world are in Ontario, though the quality is not superior to this wood in the Lake states. The average value of the white pine delivered at the Canadian factories is \$25.60, which is from three to eight dollars higher than the average cost of this wood at factories in Vermont, New Hampshire, Massachusetts, and Michigan. It would not, therefore, appear reasonable that any change in tariff laws will enable buyers of white pine in this country to get it any cheaper in Canada. However, that is one of the problems to be worked out.

The wood used in next largest quantity is spruce at an average cost of \$14.21. This includes pulpwood, which is the largest item at \$12.45 per thousand feet. Maple is employed in larger amount than any other hardwood, and at an average price of \$21.13. The average cost of this wood at New Hampshire factories is \$20.73, in Michigan \$17.53; consequently there is little likelihood that maple logs or lumber will come from Canada into the United States, because commodities do not usually move from a region of high value to a region of low. Elm in Ontario costs the factories \$23.52, and in Michigan \$22.98. The difference is small, but is in favor of manufacturers in the Lake states. Ash is about a standoff between the two countries. In Ontario it costs \$35.05, in New Hampshire \$33.17, and in Michigan \$39.47. Hemlock, the third in quantity of the softwoods bought by Ontario manufacturers, costs \$16.34 in that province, \$14.98 in New Hampshire, and \$13.31 in Michigan. Ontario has large amounts of hemlock timber, but judging from the prices manufacturers are paying for it on the Canadian side of the line, there is small likelihood that hemlock logs or lumber will be shipped to factories in the United States.

It holds with most of the important woods which are used for manufacturing purposes in Ontario and on this side of the line, that this wood costs more in Ontario. Following are examples in addition to those given above:

	Cost in	Cost in
Wood-	Michigan	Ontario
Basswood	\$20.79	822.72
Balsam	11.68	14.23

Chestnut	12.57	25.77
Douglas . r	37 60	42.00
Cottonwood	200 821	51.00
Tamarack	13.91	15.59
Sycamore .	26.41	0.4 51

The difference in cost for all of these woods is sufficient to bar their shipment as raw material across the line into the United States in large quantities.

The average cost of all the wood used in Ontario is slightly above the average in Michigan, but the difference in the average cost for a number of industries is decidedly in favor of Michigan. That is, the Michigan manufacturers are able to buy their material for less than it can be bought in Ontario. Among such industries are the following:

	Cost of wood	Cost of wood
Industry	m Onfario	ın Michigan
Boxes	818.53	815.25
Flooring		18.94
Vehicle supplies	52.13	34.27
Musical instruments	38.22	34.37
Cars	35.12	25.18
Handles	29.99	13.36
Woodenware	17.86	15.62
Sporting goods	37.48	30.49
Laundry appliances	28.84	23.93
Ships and boats	45,60	44.08

In a few industries the cost of raw material appears to be in favor of Ontario as compared with Michigan, which is shown as follows:

	Cost of wood	Cost of wood
Industry—	in Ontario	in Michigan
Sash, doors and blinds	824.59	827.78
Furniture	30.59	41.13
Agricultural implements	35.43	38.99
Coffins	23.84	31.10

The manufacturing of wood is much more highly developed and concentrated in Michigan than in Ontario. Michigan's area is only one-fourth that of the Canadian province, but its annual output of manufactured forest products is more than fifty per cent greater, both in feet and in cost of materials.

Ontario procures eighty-two per cent of its raw material at home, and four per cent of the remainder from other Canadian provinces, while less than fourteen per cent is imported from foreign countries. Most of the imports are drawn from the United States. In speaking of the increasing cost of certain woods the report says:

"The scarcity of wood and its rapidly increasing price is being felt by every industry using wood. In the case of some of the hardwoods, such as white oak and hickory, the native supply is practically exhausted with the exception of odd trees and groups of trees in farmers' woodlots. The prices of these two species have increased at an alarming rate and even in the United States where the bulk of the supply comes from, a shortage is being felt and the center of supply is constantly shifting to new regions. It is probable that the price of each kind of wood will continue to increase until it equals or exceeds the cost of growing that particular wood in the forest."

The policy which Ontario should pursue is clearly and forcibly explained in the following paragraph:

"A forestry policy for the province, which has as its aim the management of forest lands to produce a steady supply of wood is the only solution of the problem of how to perpetuate the wood-using industries of Ontario. Canadians cannot count on foreign countries to supply them forever. The economic balance of exports and imports must be insured by the growing of trees adapted to this climate, and in sufficient quantities to supply the local demand and provide a surplus for exportation to other countries. There are millions of acres of land in Ontario that are unfit for agriculture and still are suitable for growing forests. Such land should be withheld from homestead entry and managed as forests. In some parts of the province large areas of deserted farmlands are found, and lands that are not suitable for growing crops but which are being held by farmers who are too poor to move to more fertile regions."

The Veteran Veneer Man Talks

"I see by the proces," said the veteran veneer man, as he stid back in his chair, planted his crossed feet on top of the table opposite him and thrust out his stogic at a dangerous angle, that a new veneer mill is to be started in the Ohio valley, and will be equipped with four saws. I know of a concern further south which has begun the manufacture of sawed veneers, and has put in two or three saws. A company which had the misfortune to lose its mill by fire some time ago apparently has not profited by its opportunity, for it is going back in with four saws to be kept going on oak veneers. And a company which is manufacturing lumber in Arkansas has been attracted by the apparently easy money in veneer manufacture and has been looking around for one or two second-hand saws with which to manufacture thin stock."

"That is very interesting," remarked his visitor, "but rather pointless. What's the answer?"

"Just this," said the veneer man, taking his feet down from the table and his stogic from his mouth with a single motion. "We are getting too many saws for the veneer market to take care of. I happen to have equipment for making any kind of stock the consumer may want. We'll give him sawed stock if he wants it, slice-cut if he prefers that, or rotary veneers if they will serve his purpose. Consequently I don't believe I am prejudiced one way or the other on the subject. But I am convinced that some of us are going to find it rather hard to sell sawed veneers at a profit before very long.

"Good sliced stock has always constituted the bulk of the business in figured oak veneers. It has with us, and I suppose with other members of the trade as well. There are a certain number of consumers who appreciate the fact that sawed veneers can't be beat, and that the material is much more likely to be sound and to remain without defect during the entire period of its use than sliced stock, the fibers of which may have been ruptured in cutting, and which consequently may not give perfect satisfaction. But the difference in quality is so slight that only the top-notchers are willing to pay the considerable difference in price which is entailed by the increased cost of manufacturing sawed stock.

"With the market thus limited, and with those already in the field never having had any difficulty supplying the demand, it is a question as to how enough business is to be created to keep all these new saws busy."

"Changing the subject," interposed his visitor, "have you ever found much of a demand for gum veneers for crossbanding purposes?"

"We make some gum stock for that purpose," replied the veneer man, "but frankly I do not believe that gum can be successfully substituted for poplar in this connection. In the first place, gum is not so easy to handle as poplar, and the chances of trouble are not desirable, even though with proper handling gum crossbanding will give satisfaction. But poplar is so easy to work with and is so thoroughly dependable that there is little question as to which is the more desirable.

"I have always had a leaning toward poplar, and while I know that it has been displaced in a good many industries in favor of gum, cypress and other cheaper woods, it has always been a question of price rather than quality. At least that is my view of the matter. But in the veneer business the difference in cost between poplar and gum crossbanding is so slight, amounting to between \$1 and \$2 a thousand, that it hardly pays to risk the experiment of using an indifferent substitute in order to save this relatively small amount."

"What are you getting ready to do out there?" inquired the caller, noting preparations for construction work in the yard of the veneer plant.

"We're going to build a new steaming vat," said the veteran manufacturer. "Our old one is getting leaky, and we need a bigger capacity, anyhow, so we are going to put in a new tank. We have been considering cutting out wood and substituting concrete. Wood is all right, because it's cheap and answers the purpose, but it makes repairs necessary and doesn't last as long as one would like. With concrete, however, you build but once. Where have I heard that phrase before? If I can work out plans which will not require too much of an outlay, I think I shall use cement instead of wood.'?

"By the way," interposed the other, slyly, "I believe you are heartily in favor of wood office furniture instead of steel?"
"Oh, certainly," replied the veneer man. "It's not only a

question of self-interest, but wood is handsomer, lasts just as well, looks a whole lot better and protects the contents from fire just as efficiently as most of these tin boxes they're putting out."

"'Very good, sir," was the retort; "but don't you think it is rather inconsistent to boost the use of your own product if office equipment and then give the boot to the product of some other lumberman when it comes to building a steaming vat?"

"Inconsistency your grandmother!" was the somewhat heated reply. "My buying a few dollars' worth of lumber isn't going to help the business very much, while patronizing the eement trade to the extent of a few barrels won't enable them to pay many dividends. I figure it's up to me to get the best for my individual work, without regard to its possible effect on the trade at large. That may be a selfish view to take of it, but we must necessarily look at business propositions from that angle."

Seeing that it was politic to direct the conversation along other lines, the caller asked what the manufacturer had heard about the use of veneers for wall-paper.

"The idea is an excellent one," he replied, "and I have seen some beautiful results secured in this way. The material used in this class of work is little more than paper, some of it being cut 120 to the inch. It is laid over a base of composition or other material, and takes an excellent finish. Most of the wallpaper dealers carry lines of paneling, so-called, for use by those who want to get the effect of a wood finish without going to the expense of having the entire interior trim of the real article. By the use of a cheap base of the kind I mentioned, covered with a thin face veneer, one is able to get a very attractive interior at a most reasonable price. However, the idea has not been in use long enough for final results to be stated. I don't really know whether the novelty can be said to have become a staple as yet or not, but I have heard of some veneer houses, especially those cutting mahogany on a large scale, having sold a good deal of stock to wall paper manufacturers for use in this way.

"And that reminds me," he continued, with a ghost of a smile, "of a unique suggestion which was made in one of the trade journals. I thought at first the writer of the article must be 'kidding' his readers, but as far as I was able to determine the suggestion was made in all seriousness. It was that in order to eliminate the troubles of the finishing-room, and to determine whether defects appearing later were due to the veneer or the varnish, the veneers be finished before they were laid! If one were disposed to treat such an idea with any degree of seriousness, of course, it would be proper to ask what he meant by the term veneers: What thickness, for example, between a fourth and one one-hundred-twentieth of an inch? Certainly no one would attempt to finish a sheet of veneer cut in the latter dimension, and even with thicker stock it is quite evident that the result of finishing it would be to make it draw up into a regular gutter. Without wishing to call anybody names, I must say that it certainly took a good brand of dope to produce an idea of that kind."

Just then the mill clerk came in a with a batch of cost sheets showing the day's operations.

"I believe that the veneer interests, including the panel men,"

said the observer, "are doing more real, sure-enough practical work along the lines of cost accounting than any other set of manufacturers in the country."

"True enough," replied the vencer man; "and yet, strange to

relate, we still find people selling their stock for less than it costs to produce it, and others refusing to find out what the cost

6 D. + ., Jr.

Fungus Enemies of Oak Trees

Decay of wood is caused by fungus, and without fungus there can be little decay. Scores and probably hundreds of kinds of fungus are concerned in the rotting of various woods and under different circumstances; but the present article will consider less than half a dozen kinds, and only those which are well known to most people who cut oak trees and manufacture the wood into products. In order to still further restrict the inquiry, only those kinds of fungus will be considered which affect the heartwood of oak trees while they are still living, and which produce results that are easily seen and which greatly lessen the value of the wood.

When a woodsman cuts an oak tree and finds the heartwood in a state of decay, he cannot possibly make a mistake if he lays his loss to the work of some species of fungus that in some manner has found its way to the interior of the trunk. It may not make much difference whether the particular name of the destroying organism is known or not, its effect is the most important matter, when measured by dollars and cents. It may, however, be of some assistance to be able to detect the signs of such decay before the trees are cut; and in a good many instances this can be done very accurately. though in other cases it is much more difficult.

It is quite generally known that fungus of every species and kind is a plant of a low order. There are thousands of kinds. In fact, there are so many kinds that no botanist in the world pretends to know them all. Specialists in that branch of botany spend years in fields and woods, and are constantly finding kinds unknown before. It is impossible, and fortunately unnecessary, for the business man to do more in this field than to get acquainted with the few kinds of fungus which directly concern his particular branch of business. The lumberman who works in the woods can easily do this, and he may turn his knowledge to account in a number of ways. So various are the forms that almost every person knows a few. Mushrooms and toadstools are best known, because they are large, plentiful, and easily recognized. A common sight in the woods is a shelf-like growth on old stumps, logs and living trees. This is the fruiting body of fungus, the outward, visible portion, while the roots are hidden within the wood. The terms "fruit" and "roots" express the facts in a general way; but to be scientifically precise, other terms would have to be used. Under present circumstances, however, this is unnecessary

A prevalent defect in oak trees is commonly called white heart-rot. It is caused by a fungus known as "false-tinder," but among botanists it is called Fomes igniarius. It is designated tinder because when flint and steel were the usual methods of striking fire, before the invention of matches, the tinder or punk was often made of this fungus. The outer rind was pared off, and the remainder was boiled in lye, dried, and pounded to soften it. Sometimes it was boiled with saltpeter.

False-tinder is a shelf-like growth on the trunk of the tree, resembling a horse's hoof. There are other kinds of fungus which produce shelf-like growths, and some of them might be mistaken for this one; but after a person has made a few examinations there will be little likelihood that mistakes will be made. The tinder fungus grows on living trees principally, while most of the others are found on dead trees or on logs and stumps.

This fungus is probably the most widely-distributed plant of the whole vegetable kingdom. It grows all over the world, wherever there are trees in considerable variety. There may be localities where it is not found, but its range is known to be world-wide, and that can be said of few other plants. Climate has little to do with

Almost every lumberman or dealer in forest products is acquainted

with the effect of tinder tungus. It produces the white heart-rot so common in timber. The shelf which grows on the outside of the tree is a result, not the cause of the heart-rot. Decay is usually pretty well advanced before the hoof like shelf appears. This outside growth is the fruiting body of the fungus that is rotting the tree's interior. The fruiting body must develop on the outside of the trunk, but the real damage is done inside where decay spreads up and down the trunk

The seeds of fungus are called spores. The shelf on the trunk produces them by thousands from its underside. They are too small to be seen except as a cloud of dust. The individual spores are invisible under ordinary circumstances. They are carried long distances by the wind, and unless they come in contact with a wound or injury in the trunk of a tree they cannot grow. They may lodge on a tree's bark, but it is believed that they never grow in the bark; when the spores happen to enter a wound made by the breaking of a dead limb, they find a growing place. Hair-like roots, called hyphæ, are quickly developed, and they penetrate the wood, growing inward until they reach the tree's heart, and there they begin to spread up the trunk and down.

That is the origin of the white rot which the timber cutter so often finds. He may see no sign of it on the outside of the trunk, but encounters decay in the heartwood. Sometimes one shelf occurs, sometimes there are several. The first one usually shows itself at the opening of the wound where the fungus found entrance to the tree's interior. This is generally the stub of a broken limb, as already

Tinder fungus attacks heartwood only at first, but in advance stages of decay the sapwood may become affected also, and the rot may finally reach the bark, and the death of the tree speedily follows. Death always follows an attack by this enemy. White heartrot is an incurable disease. As far as known there is absolutely no hope for a tree when the thread-like roots of tinder fungus once insinuate themselves among the fibers of its heartwood. It is like leprosy in its slow, sure work. Death may be a long time in coming, but it is certain. The tree decays more and more each year. In the early stages most of the trunk is suitable for use; but in course of time the disease spreads from branches to roots, and the unsightly growths on the trunk tell that not only is the tree's doom sealed, but the wood has become worthless.

It is believed that tinder fungus never attacks young trees. They must be old enough to have developed heartwood. Neither does it fix itself on a perfectly healthy tree. It cannot do so, because it must enter through a wound. Trunks without breaks in the bark are safe; but let an injury show itself, and there is the point of danger. Much of the beech of northern Louisiana falls a victim to the tinder fungus which enters through stubs of dead and broken limbs. In some localities mills make little effort to saw beech logs because so few of them are worth sawing.

This fungus determines the length of life of many trees. It is the disease which ultimately kills them. The proper course is to cut trees as soon as the first evidence of the disease appears. If that is done, some of the wood may be saved. It is generally not practicable to do this under forest conditions. It would cost more to go about a large tract, picking out diseased trees and cutting them, than the timber thus saved is worth. The chief saving, however, would consist in preventing the spread of the disease to other trees.

White heart-rot is not the only disease that destroys the valuable wood of living trees. Another is known as red heart-rot. It is produced by a growth called sulphur fungus (Polyporus sulphureus) on account of its yellow color when mature. It develops on tree trunks in much the same way as that which causes white heart-rot; but the shelf or truiting body is quite different in appearance. It is one of the most conspicuous fungi found in the forest. The growth develops as a series of shelves, from two to twenty or more, overlapping one another. The shelves are sometimes fairly well separated and distinct; at other times they are so close together as to form a mass five or six times as large as a cocoanut. When these shelves are young their upper surfaces are bright orange red, with a deeper red at the edges. Their upper surfaces are very moist, somewhat hard, and when bruised, they turn brown. The whole growth is soft and fleshy when young, and when squeezed, a clear, yellowish juice exudes. The fungus becomes harder as it grows older, and at maturity is brittle. It has by that time assumed the sulphur color which gives the name by which it is generally known. This fungus is edible, and is in the class of valuable mustrooms and is eagerly sought. Various tribes of hungry insects have also discovered that it is good to eat, and if mushroom hunters do not quickly gather it, insects do.

The wood user's interest in sulphur fungus has little to do with its eating qualities, but relates to its destructive effect on timber. It is a heartwood enemy, the same as the tinder fungus, but not so exclusively. It flourishes on dead wood as well as living; but what it does to dead timber is not directly interesting to the man who deals with live trees.

This fungus attacks many trees, conifers as well as hardwoods. It is particularly destructive of oak. The decayed wood in the trunk looks like reddish-brown charcoal, hence the name red heart-rot. There are various degrees of discoloration, depending upon the species of tree attacked. It is darker in most species of oak and lighter in walnut and chestnut. It frequently appears in maple, alder, locust, apple and pear. It is widely distributed in the United States and Canada, as well as in Europe. The decayed wood is characterized by cracks which radiate from the center like spokes of a wheel, and also run round with the annual rings. These cracks develop as the wood is destroyed, and are due to shrinkage as the wood decays. The cracks are not open but contain sheets of fungus, resembling thin leather. These sheets consist of masses of interwoven threads of fungus. If a piece of the wood is shaken or struck, fine dust falls out, and leaves a skeleton of sheets and cross-sheets of fungus. The dust that falls out is brown and brittle. It is reduced to fine powder when rubbed between the fingers.

The decay caused by sulphur fungus is easily recognized by the peculiarities described. In oak the broad medullary rays are the last part of the wood to fall to pieces. As with white heart-rot, young trees are exempt, for the probable reason that they have little or no heartwood, and also for the reason that very young trunks have few wounds through which the spores or seeds of the fungus can enter. In almost every instance the disease begins in the tree's crown. This is shown by the number of spike-topped trees in old forests. They die at the top first; but the decay works its way down through the heartwood the whole length of the trunk, and finally reaches the ground and finishes the destruction of the trunk.

The fruiting bodies appear on the outside of trunks after decay has made considerable progress, and they develop in the latter part of summer. They do not last long, because the swarms of waiting insects pounce on them and devour them in a few days, but not until the millions of spores have fallen out to be borne away on the wind to infect other trees within a radius of miles. The quick destruction of this parasite explains why nobody ever sees an old shelf of it on the side of a tree, as in the case of tinder fungus.

It seems to be a saprophyte as well as a parasite—that is, it lives on dead and decayed woods as well as on the living. Sulphur fungus flourishes on old logs and decayed stumps. It is offener seen there than on the trunks of living trees, probably because it is closer to the ground and more apt to be noticed. It sometimes grows where logs or stumps have so completely decayed as to be little more than heaps of reddish dirt. It is probable that the fungus does not start new growth in such places, but that the fruiting bodies that appear come from old threads which ramified through the trunk while the

tree still had some life in it, and continued to grow after the trunk decayed and fell.

The lumberman's direct interest in the fungus ceases when it has ruined the tree; but the insideous parasite still has power for harm; for every fruiting body that develops a yellow mass on stump or rotten log throws off clouds of spores to float away and find lodgment in the trunks of trees.

No remedy is known. The cutting of diseased trees, as in the case of tinder fungus, lessens the danger by reducing the number of centers from which new contagion will spread. It is to the timber owner's interest to cut and use trunks as soon as signs of disease are noticed, for some of the trees may still be unaffected, and the loss will not be total.

There are many other kinds of decay which affect living trees. Some are well known, others are observed only by specialists. The latter kinds are not of particular interest to the user of wood because they are not prevalent; but others cause much loss of timber. One such is piped rot, which is especially destructive of oak and beech. There is difference of opinion as to what fungus produces it. No growths appear on the outside of the trunk. The effect within is well known, and causes much loss, particularly among the hardwood of forests of the Mississippi valley.

The heartwood of diseased trees has a mottled appearance, and as far as reported, the sapwood is never affected. There are irregular, small, pocket-like patches of white fibers, separated by small areas of wood which retains almost its normal color. These white areas first appear lens-shaped, but they gradually become longer until they run together, and in course of time, as the disease progresses, there is a series of irregular white lines extending lengthwise with the wood. The small cavities often become filled with reddish-brown threads of fungus. In its last stages the diseased wood is composed of loose masses of white fibers mixed with brown threads, and enclosed by thin, unaffected layers of wood.

This rot may be easily distinguished from all other diseases of decidious trees on account of the speckled appearance of the affected wood. It attacks trees of all ages, provided they have heartwood. The spores are supposed to find entrance through wounds, such as are caused by the breaking of dead limbs. In oaks the disease generally appears near the tops, and in chestnut near the ground where it seems to originate in the dead wood of old stumps from which the chestnuts have sprouted.

A disease of oak commonly called soft-rot is due to a fungus known as polyporus obtusus. The fruiting body is hoof-shaped and nearly pure white when young, but turns darker with age. It never remains long on a tree trunk because insects soon destroy it as they do sulphur fungus. The usual mode of entrance into the trunk is through the hole made by some boring insect. The fruiting body generally grows at the opening of the hole. The threads of fungus follow the opening until they reach the heartwood and they then penetrate the solid wood both up the trunk and down, and in course of time what was solid wood is reduced to a soft mass. Deterioration is rapid. Trunks sometimes break and fall in a single year. The diseased wood in its last stages turns almost white, but it does not have the shrinkage cracks so common with some of the other rots which attack heartwood.

Injury from this disease is somewhat lessened by the fact that its worst attacks are made upon trees which are not very valuable, such as vellow and scrub oaks.

Imports From Haiti

During the year 1912 Haiti exported to the United States 335, 353 pounds of lignum-vitae and 848,100 pounds of logwood. The former is made into bowling balls and bearings for wheels, but the logwood has its principal use as coloring material. The intensely black pigments in the pores of the wood are extracted, purified, and prepared for use as dyes. The substance is then known in trade as "extract of logwood." The name logwood was given it originally because the shipments reaching England were in log form, and had no particular name.

New Farmers' Alliance Needed

ARTICLE FOUR

The farmer's generally septement to a man presspect to the alliances and he has found many of these alliances highly advantageous. There are openings for alliances in other directions that will prove to be no less profitable. One such association is three-cornered, and includes the farmer, the lumberman, and the paint store, with the wood-preserving plant considered as an adjunct of the paint store.

Few expenditures that the farmer can make in paint for his wooden buildings pay better than a judicious investment. The profit is two-fold. It pays in money saved, and it pays also in the improved appearance of the buildings. The wood lasts longer and it looks better, both of which are valuable considerations.

There was a time in the rural districts of the country when a painted residence was a rare sight, and no one expected to see a painted barn, cornerib, or smokehouse. Paint was costly and wood was cheap. It was less expensive and more convenient to put up a new building when the old had rotted down than to lengthen the service of the old buildings by painting them once in ten or twenty years.

A change has gradually taken place. Those who had houses of sawed lumber began to use paint when they felt they could afford it; and among the fairly well-to-do, the unpainted residences are now found principally on the frontiers or in remote settlements.

The trouble is, many a farmer imagines that he cannot afford to paint his house, though he is amply able to do so if he would properly consider the matter. Houses of that kind can be seen in nearly all parts of the country, even along the lines of railroads in old-settled communities, and they are more numerous in interior settlements somewhat removed from through routes of travel. It seems to be a characteristic of many farmers that the further they are removed from the sight of the traveling public the less inclined they are to fix up their premises. The prevailing idea with many seems to be that nice houses are chiefly to please the eye of outsiders. That view is proper as far as it goes, but it is very narrow.

Log houses and log barns are now searce in this country. Most that remain were built a long time ago and are serving their time and will disappear a few years hence. In the old settled parts of the country the log house is practically extinct. A few are still built on the frontiers. Log buildings were never painted. It would be of doubtful economy to paint them if they were still being built. But all buildings constructed of sawed lumber should be kept painted, except the very cheapest and the roughest.

It is argued by some that the lumberman's interests are inimical to the interests of paint stores, because the lumberman wants to sell as much of his product as possible, while paint preserves wood, and the more use of paint, the less call for lumber for rebuilding and repair. No progressive lumberman takes any such narrow view as that. He has no desire to see buildings rot down in order that he may sell lumber to build more. Experience has taught him that it is not the farmer who lets his buildings go to pieces for the want of paint who is the profitable customer of the lumber yard. Such a farmer is apt to be a makeshift man, living from hand to mouth.

The farmer who paints his buildings and takes care of them is the man most frequently in the market for more lumber. He is able to buy because he has taken care of his property and has derived a profit from it. Paint is to a large extent the visible index to the farmer's prosperity, progressiveness, and intelligence. Rightly or wrongly, the farmer is judged by the appearance of his buildings. If a lumber seller goes out to look for customers among farmers, he will not fool much time away about the premises where the unpainted ramshackle buildings tell a story of stupidity and stinginess, but he will go to the place where the buildings look prosperous.

Paint adds immensely to appearances, but its real value lies in its preservative properties when applied to wood. Aside from all questions of vanity or commendable pride, buildings ought to be painted. It pays well to do it. The man who buys lumber for out side work owes it to himself to use paint. Otherwise he is not getting the most out of his purchase. Billions of feet of as good lumber as ever grew have rotted in this country. That lumber would still be giving good service had it been protected by paint. Every friend and advocate of wood is interested in seeing it placed where it will give the best possible service, and treated in a way to insure it. Lumbermen would not sell a foot less material than they do if every board that goes from the mill were made to last twice as long as it does. There are so many ways to use wood that those who have found it profitable in one place will continue to buy it for service in some other capacity.

When wood is exposed to the elements, as in the case of weather boarding, it will last three or four times as long if protected by paint, and sometimes the increase is ten fold. In the eastern states there are houses of which painted weatherboarding has been in place much more than a century. A case to the point is the Washington mansion at Mt. Vernon. That has lasted more than 150 years with no visible sign of decay. Such long use affords a striking contrast with the rapid deterioration of house siding and other lumber exposed without paint to the influences of ordinary weather conditions.

The modern farm that deserves the name of up-to-date exposes very little lumber in an unpainted condition, in the buildings from the largest to the smallest. The residence, the barns, sheds, granaries, and even the poultry houses, are painted. Decay is powerless to work much harm to the buildings belonging to such a plantation. Yet that is precisely the place where lumbermen find their best market. What is bought in the way of lumber goes into additional buildings and not to replace or repair the old.

Another class of material goes to the well-regulated farm. It is posts rather than sawed lumber. Posts and other parts of fences are occasionally painted, but it is not customary on the ordinary farm. In many instances it would be profitable to do so; but the fencing material that goes to the farm is generally rather rough stuff, and sufficient paint to cover it would be quite expensive.

Preservative treatment applied to the posts is preferable to paint. It suits conditions better. The life of the post is doubled, unless it happens to be a wood that lasts a long time in its natural condition. Decay of fence posts costs the farmers of this country large sums yearly. Renewals are expensive in both money and labor. The post problem is becoming a serious one. In most wooded regions there is plenty of post material of kinds that decay quickly when set in fences, and little of the lasting kind.

Preservative treatment, for posts of that kind, acts like paint on weatherboarding. Woods of poor lasting properties, such as beech, sycamore, elm, and pine, can be made durable without excessive cost. By that means many a farmer can procure posts on his own land, or in the neighborhood, and will not be under the necessity of paying freight charges on material from a distance.

The tendency of the times is to make farm timbers last longer. Formerly little thought was given to that side of the matter. There was plenty to be had and loss from decay was lightly considered. Many farms were little else than rotting heaps for enormous quantities of forest material; but a change is taking place and it deserves to be encouraged.

Cost of Not Using It

The preservative treatment of timber is a potent factor in conservation, since it reduces the consumption and makes inferior species available. At present about twenty per cent of the crossties, but less than one-third of one per cent of the lumber used, is treated. The boy's definition of salt was: "Something that makes something taste bad when you don't put it on." The same definition, with a slight change, would apply to wood-preservation: something that costs most when you don't use it.

Oak Flooring and the Retailer

A great deal has been written about the care and handling of oak flooring after it leaves the retail yards, but very little has been said to educate the retail dealer in the proper storing and landling. In a great many yards oak flooring is handled very much like dressed rough lumber, stored in sheds that are open at both ends, thereby exposing the flooring to such an extent that it absorbs moisture from both ends, thus swelling the face anywhere from a thirty-second of an inch to one-sixteenth. When the floor layers receive flooring in this condition, it readily can be seen what an imperfect floor it will make. The floor layer and the dealer are always prone to blame the poor condition of the floor on the manufacturer. They seem to overlook the fact that all hardwood flooring will absorb moisture, and oak flooring is no exception.

In Kansas City a short time ago, 2500 feet of oak flooring was laid in a beautiful home and after the job was completed there appeared quite a number of unsightly cracks, mostly toward the ends. The dealer and the contractor blamed this condition upon the manufacturer of the flooring. He and a chief inspector travelled 500 miles to investigate this case. After spending a little time at the dealer's yard, they found the oak flooring stored within a few feet of a large opening in the warehouse and upon measuring many of the pieces, it proved that they were swelled about one sixteenth of an inch from the original manufacture. The period was during the winter season and practically the only protection that this flooring had was an ordinary roof and the rear boarded. The contractor, instead of keeping this flooring in a dry place in the house where it was to be used, for at least ten days, immediately laid it with the aforesaid results. After explanation to the architect, who was a broad-minded man, he agreed with the manufacturer that the direct trouble was in the abuse of the flooring by the improper housing given it by the retailer.

The above case is cited to point out the fact that the retail dealers should have better accommodations for the storing of oak flooring. The most modern retail yards have a certain portion of their warehouses divided off, double boarded and steam heated. Steam heat is very essential in the middle and northern climates during the winter season to keep the flooring in normal condition. The expense of this additional care is very trivial compared with the benefits derived. Floor layers and contractors will invariably trade with a yard that keeps the flooring in a good condition during the winter season. The modern retailer should be in a position to give advice to contractors and floor layers when it is necessary.

In Ithaca, N. Y., some time ago an eight inch brick wall was bulged out to the extent of two inches. After investigation, it proved that it was done by the oak flooring, which was abused by too much water being used in scrubbing the floor. Usually in a case of this kind, the floor will bulge upward about in the middle, but in this particular case it was found that nails were used very generously on an oak sub-floor.

Not long ago the writer was called upon to look at a beautiful oak floor that was very badly abused by the contractor who laid the sub-floor with apparently green stock, which shrank to such a degree that it opened up unsightly cracks in the top flooring. This was revealed by measuring the sub-floor from the under side in the cellar. The sub-floor should be reasonably dry and laid diagonally. Boards of about six inches wide are preferred and should not be put down too closely—at least an eighth of an inch should be between each board. All thicknesses of oak flooring should have a sub-floor. Many jobs are badly damaged by improper sub-floors, especially where three-eighth-inch oak flooring is used.

Atmospheric conditions peculiarly affect oak flooring throughout the season, and with this in mind, it surely would pay the retail dealer to give it more care, so that when the contractor calls for it for laying it will be in the proper condition for use.

The modern dealer in catering to the consuming oak flooring trade, would find it more profitable and advantageous to purchase in straight carlots. The cost is much less, besides assuring the arrival

of the flooring in better condition. It is just as important these days to carry a good stock of the various grades, faces and thicknesses in oak flooring as it is in yellow pine or sash and doors. The dealer who keeps a good supply of hardwood flooring of the various kinds on hand will find it to his interest to get more trade and is in a much better position to serve his customers than the old-fashioned dealer who buys two or three thousand feet at a time.

There are many dealers neglecting hardwood flooring by not carrying a sufficient quantity for their prospective customers and not pushing it by way of newspaper advertising in their respective towns, or by talking it to architects and contractors. W. L. CLAFFEY,

Reducing the "Working" of Wood by Kiln-Drying

A great source of annoyance to all woodworkers and users is the tendency of the material to shrink and swell with changes in atmospheric conditions. This is due to the fact that wood substance is hygroscopic—that is, it attracts or absorbs moisture from the air. Increase in the moisture content of fairly dry wood causes it to swell, and drying out causes it to shrink. This property of wood can be reduced, but not entirely eliminated, by subjecting wood to boiling, steaming, prolonged soaking, or exposure to high temperature.

To determine just what effect kiln-drying has on the subsequent moisture condition of wood as compared with simple air-seasoning, a number of tests were conducted by the Forest Service in co-operation with the Yale Forest School. The test specimens were of two sizes, 2x2x6 inches and 2x11/2x30 inches. Three sets of seven pieces each were taken for each of three species, and for each of the different temperatures used. One set was simply air-dried and used as a check (C) with which to compare the other two sets of that series. Another set (A) was first air-dried for about a year, then kiln-dried, and finally placed aside with the check specimens to air for a year or more. The third set (B) of the series was soaked from the green condition for the same length of time that the other sets were air-dried, was then kiln-dried with the second set and placed in the air with the others. The airing took place in the open under a shed on the north side of a building where they were protected from sun and rain. The comparative tests were all made at the same time which adds to the reliability of the results.

A comparison of the water content of the pieces that were kiln-dried first with that of the pieces that were only air-dried showed that in no case did the kiln-dried material absorb as much moisture as the other.

For example, air-dried and water-soaked red oak blocks were kiln-dried at maximum temperatures of 145°, 170°, 212°, and 274°. They were then exposed to the air for a year or more and their average moisture content at the end of that time determined. The results were as follows: At 145°, previously air-dried (A), 7.6 per cent; previously soaked (B), 9.6 per cent; check specimen, air-dried only (C), 12.4 per cent. Similarly for the other temperatures the figures were: At 170°, (A) 10.6, (B) 10.6, (C) 12.4; at 212°, (A) 9.4, (B) 9.5, (C) 12.0; at 274°, (A) 8.9, (B) 9.9, (C) 12.6. From these figures, each of which is an average of seven tests, the reduction in hygroscopicity due to kiln-drying appears to be a permanent change by some fundamental change in the wood substance.

The degree of dryness attained, when strength is of prime importance, should not exceed that at which the wood is likely to remain in use, but where reduction of the hygroscopic properties of wood are of first consideration it should be carried to as great a degree as possible and subsequently brought back to the condition under which the wood is to be used by exposure to the air for some time before the lumber is manufactured.

The wise lumber buyer looks not at price alone or too much, but also at how the stock offered will fit his needs.

※ European Dock Measurements Unfair 》

There are many questions with the experienced exporter takes into consideration in figuring up at the end of his year whether he has derived a reasonable profit from his efforts and investment in foreign trade. The long distance between seller and buyer in the ease of export shipments makes it necessary that in order to insure satisfaction on both sides and fair treatment of all parties concerned, uniform and practical methods should govern in all phases of such foreign shipments.

One of the features which the lumber exporters have been most opposed to is the practice prevailing on the part of the foreign dock companies in connection with the measurement of import shipments of lumber. A great hardship is worked upon exporters because of the practice on the part of the dock people abroad to make their measurements on a purely theoretical and technical basis, without regard for a practical method as accepted by the lumber trade throughout all the lumber-handling sections of the globe. This has to do with the measurement of thickness, the dock people ruling that a board that is a sixteenth inch scant on the thinnest edge must take the next thickness below what it was marked.

A recent issue of the Timber Trade Journal of London contains a fair exposition of this matter in the form of an interview given to that paper by a prominent American lumber shipper. His statement is as follows:

"More than a year ago a committee of the National Lumber Exporters' Association, with headquarters at Baltimore, U. S. A., composed of representative hardwood shippers, visited London, and had conferences with the hardwood section of the Timber Trade Federation regarding the technical manner in which the dock companies measured all parcels of American hardwoods landed in the London docks. Shippers have nearly always had shortages on shipments measured by the dock companies on account of the technical manner in which the thickness is taken, whereas shipments going overside into lighters for buyer's wharf and measured by the buyers seldom showed a shortage. The principal reason of these shortages is that the thickness, as taken by the dock companies, is not taken in a practical way. For instance, take one inch and thicker quartered oak, which wood always shrinks more on the heart edge than on the sap edge, and for which no accurate allowance when sawing can be allowed, as timber from one tree shrinks more than from another, being of different texture. The dock companies, when finding a piece one-sixteenth inch scant on the thinnest edge (always the heart edge), put such a piece down to the next thickness. Supposing the goods happened to be 11/4 inches by 10 inches and up quartered white oak, with a value, say, of 5s. 9d. per foot cube, every piece onesixteenth under 11/4 inch at any place would bring the piece down to 1x10 and up, at a value of, say, 5s. 6d., thus not only reducing the contents, but also reducing the value.

"At the various committee meetings with the hardwood section of the Timber Trade Federation, those present being mostly the London timber brokers, no support was given the American shippers, the reason being stated that the brokers of the hardwood section of the Timber Trade Federation could take no action without the merchants being present to discuss the matter and vote on same, and at the last meeting it was stated that it was not possible to get the merchants sufficiently interested to discuss the matter, and therefore it was

regretted that present methods could not be changed.

"It must be obvious to merchants engaged in importing American hardwoods to London that the dock companies' measurement is too technical, for when these same merchants measure the goods at their wharves there is very seldom a shortage, but if measured by the dock companies there is invariably a shortage. This does not seem fair to the shipper. At the several meetings it was explained by the American committee that it is impossible to manufacture lumber so uniform as to have each piece dry the exact thickness it was originally cut for, the reason being the different texture of the various logs, one shrinking more than another in the drying; therefore, as all the markets in the United Kingdom, as well as on the Continent,

measure American, when from a particular at or year, cell and the London timber merchants when measuring at their yards, and as the dock companies' measure is the only technical measurement, and as the Timber Trade Federation would not come to the relief of the American shippers, the matter was referred to the members of the National Lumber Exporters' Association for action. seventy per cent of whom agreed to sell in London only on the basis of measurement, these being according to conditions asked for at the conference between the Timber Trade Federation and the National Lumber Exporters' Association committee, as follows:

'In taking the thickness of all American lumber, same to be taken on

considered full thickness.

shipments are texted by the disk company to have the super ficial contents marked on each piece in figures, such figures must stand or alternatively any pieces will the measurements of which the deck company disagrees must be laid aside for inspection.

Where the variation in measure does not amount to one and one-half per cent, no claim for shortage is to be made, provided the wood is meas-

ured full board contents.

"It was suggested by some of the members of the Timber Trade Federation at the conferences that if these points were agreed to, American shippers would cut their timber specially for the London market, sawing it thinner for the London market alone, so as to reap this benefit. Anyone who has been in the States and is familiar with the workings of an American band mill, and who is at all practical, must know that this could not be done.

"Regarding the 112 per cent difference in measure provided for, this is only a reasonable difference that any two measurers might make in measuring the same parcel, and is reasonable inasmuch as no measurer can say he is absolutely infallible, and that his measure is absolutely correct. In a car of 1 inch boards of 12,000 feet super ficial the difference is only 180 feet superficial. It does not mean that every car of American hardwoods will be 11/2 per cent short of London measure, but it does mean that if a greater difference than this does not exist, there is no basis for claim.

"Another point is that no credit is ever given the shipper by the buyer when the parcel shows an overplus, and this does happen, perhaps, fairly often, except when measured by the dock companies.

"In view of the above decision, it would be well for importers whose contracts contain these conditions, and who intend having the goods measured by the dock companies, to notify the dock companies so that measurement can be taken in accordance with contract. It is a pity that the hardwood section of the Timber Trade Federation of London and the National Lumber Exporters' Association do not act more in harmony, as much good would result in exchange of practical ideas from time to time.

"Hardwood forests in the States are rapidly becoming depleted. and conditions in producing and marketing must naturally change from time to time, and unless importers are prepared to lend a helping hand to shippers as conditions change, it naturally forces shippers to protect their interests as best they can without the help of the importers, which is to be very much regretted."

Good Work Spreading

Forest fire associations among timberland owners, by publicity and systematic organization, are materially reducing forest fire losses. The work begins in the neighborhood and extends to the nation. The government's provision whereby it supplies money for fire-fighting in states which provide money for the same purpose, is helping the work more than almost any other one thing. It is not so much the actual amount of money spent by the government as it is the spread of the right ideas among the people. A majority of the forested states have organizations which are doing effective work in forest protection and education.

The Fifth Conservation Congress

The fifth annual meeting of the National Conservation Congress, which met in Washington, D. C., Nov. 18, considered numerous topics, but the subject of chief interest to lumbermen and workers in wood was covered by the reports of ten sub-committees appointed by the general forestry committee. The reports were made to the congress and called forth discussion during several hours.

The publicity commutee, or which E. T. Allen of Portland, Ore, was chairman, suggested that the various forestry associations and workers should take measures to acquaint the public with what is being done, because the success of all great movements depends on popular approval. The public is interested, and it may be counted on to back up a cause that is on the right track.

The committee on state forest policies in its report outlined the general features of laws which should be in force. The state forest service should be free from politics, and the spoils system should have no room in it. Workers who prove themselves efficient ought to hold their places without annoyance from job hunters. Civil service regulations should be in force. The forestry work ought not be under the control of boards or commissions composed of men who are not acquainted with the work, otherwise the real workers are liable to be hampered instead of helped, by meddlesome interference. William T. Cox of Minnesota was chairman of this committee.

The report on lumbering was presented by R. C. Bryant, chairman of the committee. The purposes of the report were to furnish a basis on which to calculate cost and stumpage values; explain how scientific management can be employed in lumber operations; recommend standard values for log and lumber measurements; and set forth the advantages of forest engineering.

The committee was unable to submit a report satisfactory to itself because the time had been too short and the means inadequate to collect data on which to base the report. Less than five per cent of the lumbermen replied to the request sent them for information, and the committee had no appropriation to pay for field work. For these reasons the report was chiefly suggestive, and indicated lines along which it may be profitable to conduct future work. It was pointed out that though lumbering is one of the oldest American industries, it is still undergoing rapid change in methods.

The committee on forest utilization answered critics who are accustomed to blame lumbermen for waste in woods. It was declared that a market for forest products equal to that in Germany would result in as close timber utilization in the United States as exists in Germany. Five principal conditions make for closer utilization, and these are: Ready markets, cheap transportation, good timber, efficient management, and proper equipment. Of these the lumberman can control only the last two. Nothing can be saved unless there is a market for it, and the difference between no waste and large waste is the difference between being near and far from market. Transportation charges enter into a decision as to whether the mill should be near the timber or near the market, and often determine whether material will be utilized or thrown away.

The ever-recurrent problem came up again in the convention: What shall be done with the cutover land? A report by the committee on forest planting, of which Earle H. Clapp is chairman, brought the matter before the convention. According to that report at least \$65,000,000 are lost annually because denuded forest lands remain unproductive. The problem of reforestation should be met squarely by entering upon a comprehensive plan covering at least a fifty-year period. Such a plan should include federal and state activity, federal aid for states, and state aid for counties, cities, and towns, and the encouragement of private planting. At the same time forest planting is not usually attractive as an investment to the small private owner. Therefore, the long-time nature of the investment makes planting most feasible for federal, state, or more local governments, or for long-lived corporations. There are, however, many examples of successful plantings though the area planted each year is very small in contrast to the millions of acres which require reforestation. It is particularly pointed out in the report that one of the first require-

ments is to make such planting investments safe from loss, especially from fire. Organized fire prevention and control have minimized losses from this source. Adequate fire protection is bound to come if extensive planting is undertaken, because the investment will require such protection.

There was a report on the fire situation by a committee of which C. S. Chapman of Oregon was chairman. While forest fires in the United States have taken a yearly toll of seventy lives and \$25, 000,000 in property, the greatest advance in forest work in this country has been along the lines of fire prevention. "There are now ten patrolmen," continues the report, "where there was only one five years ago. During the past five years there has been an increase of over 3,000 per cent in the area of private land patrolled against fire."

The committee specially condemns the so-called "light-burning" theory advocated by certain timber owners in California saying that it is not only unpractical from a financial standpoint, but causes destruction of young timber and makes for carelessness with fire on the part of the public.

The subject of forest taxation is an ever fruitful field for discussion in conservation congresses and meetings of like kind. It was brought up by the report of the committee which had that subject in hand. The systems of forest taxation in this country are not uniform, but they are generally wrong, according to the findings of the committee. Present methods tend toward forest destruction rather than perpetuation; but the ideal system would stimulate the owner and the community to bring about the greatest production, best protection, and fullest utilization. Such a policy tends toward the principle of a tax on yield.

The report of the committee on forestry took a stand in favor of more practical training of foresters, or rather more foresters with practical training, and fewer with only theoretical training. "Too many schools are turning out professional foresters and not enough are teaching forestry to the layman," was the way the committee stated the case, and added: "It is much as if with too many medical schools there were not enough schools teaching hygiene and sanitation. The great need at the present time is better facilities for secondary forestry education, an education which will ultimately reach every man who has to do with the growing of timber or its harvest. Contrasted with the overcrowded field of technical education of the highest order, the field of secondary education is almost unlimited, and in comparison with large interests involved, almost untouched."

U. S. Forester Graves, in his address, laid special emphasis on the fact that forestry in its larger aspect is a problem for the government rather than for the individual. It should be taken up by federal, state, and municipal governments.

Underlying the forestry problem are two fundamental considerations which should be emphasized and reiterated until thoroughly driven home. One is its public character. The public has a peculiar interest in the benefits of forestry. Both in the matter of a continued supply of forest products and in that of the conservation of water resources the public welfare is at stake. In each case purposes vital to the prosperity of the country can be accomplished only with the direct participation of the public. Private owners will secure results only on a limited scale in the long run on their own initiative. It takes too long, from fifty to two hundred years, to grow a crop of timber trees. Most private owners in face of fire risk, bad tax laws, and uncertain future markets will not make the necessary investments.

Mr. Graves quoted Secretary of Agriculture Houston's instructions which set forth his forest policy, as follows:

"Establish permanent boundaries. Classify your lands; segregate the agricultural land and fix right limits for what is needed as protective and productive forests. Develop permanent policies based on full recognition of lasting public interests, and settled forestry practice fitted to the individual needs of each forest and locality. Study

etheiency; make any changes necessary for this purpose, but make no changes that are not clearly called for in the public intenst, Carry out your plans for the development and increasing ase of the forests; but above all, make each forest work for community upliabiling and local as well as general welfare. We must always have in mind the men and women who are building up a new country and laying the foundations for prosperous, thriving commonwealths. We must try to study their needs and see where and how the forests can help them. But we must not cease to guard effectively against the evils of private privilege and monopolistic control of resources now the property of the public.

The chief contest of the congress was precipitated by a report from the water powers committee. There were, first and last, three reports presented. One by the majority, another by the minority, and a third as a compromise. The third was finally adopted. The debate on these resolutions developed into a contest between the state's rights forces on the one side, and their opponents on the other. The former demanded what amounted to a surrender on the part of the government of all its forest, mineral and grazing lands to the states in which they lie; and this would give the water power sites and irrigation projects to the states individually.

The other side of the controversy included those who insisted that the government should hold what it has and administer it for the benefit of the whole people, thereby guaranteeing that this valuable property would not fall into the hands of speculators who are seeking private gain at the expense of the public.

The debate was sharp and vigorous, and when the vote was taken the result showed a substantial victory for the opponents of the state's rights forces. The vote stood 434 for federal control, 154 morning.

The election of officers resulted as follows:

Philistory: Char Latmop Pack, to lected

Vis. Partifolist M. Emmons Crocket

EXPORTS SOLE, VAN Thomas R. Shipporto and J. R. Compley, Sole, Land N. C. McLood of new officer

Threest near Dr. Henry S. Drimker

The congress adopted a series of resolutions on forestry in substance as follows:

The Congress deplayes the lack of uniform State activity in terest work and urges the crystallization of an effort in the lagging States to secure the creation of forest departments.

Recommendations for liberal appropriation in all States for forest fire prevention and close cooperation by State officers with the Federal and private protective agencies. An annual appropriation by Congress for the continuation of the Weeks

law for Federal cooperation with the States
Simplifying and shortening the process of purchase under the Weeks

act.
That Federal troops be made systematically available for controlling forest fires.

Commending the work of the Federal Forest Service and urging Congress to make liberal provision for such work and to combat any attempt to break down its eliciency

Recommendations to the State legislatures to secure moderate taxation for forest lands and taxation upon forest crops only when the crop is harvested.

Suggestion to forest owners to study and emulate the many cooperative partial associations and endersing every means of bringing lumbermen and the public more closely together.

Commending the work of Philippine Forestry Bureau and endorsing the proposed Forest Products Exposition.

The invitation extended by San Francisco to hold the congress in that city in 1915 during the Panama Exposition was accepted.

I. W. W. Pronounced a Failure

A close study of the methods and organization of the Industrial Workers of the World by Professor R. F. Hoxie of the University of Chicago has convinced him that that organization, instead of being the grim, brooding power generally pictured in the popular imagination, is a body utterly incapable of strong, efficient, united action or the attainment of results of a permanent character. According to Professor Hoxie, the I. W. W. is weak not only in membership and organic unity but possesses no financial resources in the slightest degree adequate to advance and maintain its proposed organization of the working classes or to consistently carry on any united assault upon capital. Professor Hoxie says that the first significant fact revealed by the eighth annual convention of the organization, held in Chicago in September, and by its whole history, which claims as its mission the organization of the whole working class for the overthrow of capital, has failed utterly in its efforts to attach itself permanently to any considerable body of men representing any section of American workers.

Professor Hoxie, in his article on the subject in the Journal of Political Economy, says that the I. W. W. must depend for the bulk of its membership on the least capable, least developed, lowest trained and poorest paid of American workmen. To this may be added an element made up of irresponsible atomists who are so constituted that they accept as a direct challenge any evidence of authority. It is, of course, an admitted fact that no American workman of any intellectual capacity and constructive mind will knowingly affiliate himself permanently with an organization of revolutionary character such as is the I. W. W., as long as there is a chance of bettering himself through the gradual and legitimate development of improved systems of working rules and conditions.

Professor Hoxie's statement that in spite of eight years of organizing effort and unparalleled advertisement, the official roll of the convention indicated that its present paid-up membership does not exceed 14,000 men, surely offers a decided measure of satisfaction to those employers who have been most active in opposing the teachings of this altogether un-American organization. His conclusion that viewing the situation in a reasonable light shows that the Industrial Workers of the World as a positive social factor is more an object of pathetic interest than of fear, is unquestionably based on an intimate knowledge of the possible developments through this

organization and surely should convince employers throughout the country that they need not be unduly apprehensive in a general way as to any far-reaching or lasting results that might come through its activities.

Experience Appreciated

It has been said of the veneer industry that there were too many irresponsible manufacturers turning out veneer for the good of the more legitimate manufacturers. On paper the veneer business figures out to offer an astonishingly real opportunity of returning dollars for cents invested. It has been the custom among those not conversant with conditions in the business to figure that if a lumberman can make so much profit out of a log, a veneer man should certainly make a profit equal to the lumberman's profit multiplied by the number of times a sheet of veneer would be contained in a one-nich board. This has been the theory, as stated, of some of the irresponsible element, but it is gratifying to note the decreasing number of such concerns engaged in the veneer business and the corresponding increase of the efficiency of the better established concerns.

That this condition has been realized by veneer consumers is given occasional proof, and in this connection the following letter received by a prominent manufacturer of established reputation from a large consumer of veneers is offered as evidence of this sentiment on the part of the consuming trade:

Oct. 13, 1913.

Referring to your quotation of the 29th ult. (the same being for 7/32 gum veneer) we wish to have you advise us as to whether you manufacture this stock in your works at ———, or whether you are merely selling agents for another concern. We ask this for the reason that we would have confidence in such stock as you would manufacture. Our experience has been with some of the other mills, that they do not know their business and we would not care to take in any stock from a mill that is passing through the experimental stage and would probably give us infectior stock

An Easy Answer

An exchange devotes nearly a column of its valuable space in commenting on the disappearance of the bootjacks which at one time are said to have numbered ten million in the United States and which are now so scarce that many people do not know what a bootjack is. It is claimed that their disappearance is wrapped in mystery, since nobody can find out where they went. There is no mystery about it. The answer is easy: they were thrown at cats.

The Mail Bag

en i neville terili en eta en eta en el el tribilita

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 601 -Seeks White Ash Logs and Walnut

Lendon F. C., Nov. 5. Editor Hyrowood Ricome. We shall be 21ad if you could knolly assist us in finding some really first class northern white as a logs as we have a considerable demand for these but have failed so far in highing a reliable source

At the present moment we are prepared to place an order to way of a sample for 300 logs. 11 inches and up. These must be first class in every respect white logs suitable for veneer purposes, and must be also Intely without brown streak. This specification is one which we find difficult to fill, but we can assure you there is a very considerable trade to be done

We also have a good demand for black walnut flitches, bluish black color, 4.8 inches thick, 10 inches and up wide by 8 feet and up long These are also required for veneer purposes and must be absolutely sound in every respect.

Of course we are aware that these are difficult to obtain but our buyers in turn would not object to pay a reasonable price. At the same time, if you could favor us with a list of first-class veneer manufacturers of all kinds of wood, we should be very pleased as we have an opportunity, providing the prices are right, of disposing of some very large lines of vencer of all kinds.

The above English importing house has been advised that "northern" white ash logs are pretty nearly an unknown quantity, and especially the character of logs it desires, and that the character of black walnut flitches asked for are still more difficult to obtain. However, it has been referred to manufacturers of white ash and black walnut who possibly can supply these requirements. Anyone interested may have the address on application.—Editor.

B 602-Rules for Scaling Logs

Lanes Bottom, W. Va .-- Editor HARDWOOD RECORD: Will you kindly send me a book of rules on scaling logs? I have tried different places to get them, but have failed so far. -Company.

The above correspondent has been advised that as far as we know there is no book of rules published on the scaling of logs. However, some years ago the writer prepared in connection with some lumber estimating tables a set of tables showing the scale of logs of different diameters on sundry log scale measurements, and the inquirer has been referred to the publishers of this booklet.- Editor.

B 603-Seeks Pacific Coast Manufacturers of Japanese Oak Logs

DERMOTT, ARK., Nov. 8 .- Editor Hardwood Record: Can you furnish us the names and addresses of firms on the Pacific coast who are importing Japanese oak logs and sawing them there? LUMBER COMPANY

HARDWOOD RECORD has advised this firm of the names of certain companies in this line and would appreciate any further information that any of its readers can give .- Editor.

B 604-Wants Basswood Drawer Bottoms

St. Paul, Minn., Nov. 20.-Editor Hardwood Record: We are in the market for 2,000 pieces of 1/4 x20x211/2" basswood drawer bottom stock which we want for use now.

HARDWOOD RECORD has referred this concern to a panel manufacturer who may be in a position to get out this stock. Others interested can write this office.- EDITOR.

B 605-Wants Market for Short Pieces Quartered Oak

COLUMBUS, O., Nov. 15 .- Editor Hardwood Record: We produce a number of short pieces in quartered oak, running in narrow widths upwards. These develop in cutting chair stock as well as ends of boards which are too short for specific cutting. It seems to us that there should be a market for this short and narrow stock. Can you help us find it?

---- LUMBER COMPANY. This concern has been advised that there is a possible market for this stock in the form of chair backs and table tops if it will ascertain the requirements of manufacturers of those lines and cut its stock accordingly .- Editor.

B 606-Wants to Buy Plain Red Oak

FORT WILLIAM, ONL, Nov. 14 Editor HARDWOOD RECORD: Can you put us in touch with oak shippers who will be willing to take contracts to apply 1x8 and 1x10 perm ted oak with one clear face? Stock would

The above company has been supplied with a short list of manu facturers who possibly can get out this stock.-Editor.

B 607-Wants Oak Squares

PHILAD CHILL BY NOV. 14. Editor Hardwood Ricord. We are in the market for delivery in Philadelphia, for clear oak squares, bright sap, no defect, in the following sizes: 23½"x23½".30", 3"x3".25", 3"x3".29", 3"x3".0", 3"x3".6" and up No. 1 common and better, 4"x4"-6 fect No. I common and better. the last two items to be graded on National Hardwood Lumber A sociation rules. We can take them either to be cut to order and held on sticks till dry or, if dry, for immediate shipment.

LUMBIE COMPANY.

B 608 -Wants Pecan and Dogwood

CHICOPEE, MASS., Nov. 9 Editor HARDWOOD RECORD: Kindly advise the manufacturers of pecan and dogwood,

LEMBER COMPANY.

The above concern has been given a list of manufacturers of pecan and dogwood. Others interested can have the necessary information on writing this office. EDITOR.

B 609-Liverpool Concern Wants Oak

LIVERPOOL, ENGLAND, Nov. 4. Editor HARDWOOD RECORD: Friends of ours are open for both white and red oak in No. 1 common and No. 2 common, in thicknesses of %,", ½", %,", ¾" and 1". A mixed car first and seconds white oak %," and %," or 1,", %,", and ¾". A car of white oak squares 213,"x33,"x21,1", should be full size and perfect on arrival

Those interested in this inquiry should address this office .- EDITOR.

B 610-Wants to Market Red Cedar

KNOXVILLE, TENN. Nov. 10 .- Editor Hardwood Record: One of our sawmill men has a tract of timber, three or four hundred acres, on which there is quite a lot of red cedar for which he wants a market. We would thank you if you would give us the names of some concerns who handle Tennessee red cedar in the log or post and also cut into inch boards, as we will be able to furnish within the next few months several cars of each - LIMBER COMPANY

This company has been supplied with the necessary information. Others interested may have the address upon application to this office .- EDITOR.

B 611-Wants Information on Hardwood Paving Blocks

THOMSON, N. Y., Nov. 10 .- Editor Hardwood Record: Looking over one of the recent issues of your paper the writer noticed articles concerning the ultilization of hardwood in the manufacture of creosoted paving If you have any further data or details regarding the manufacture of these articles, we will be pleased to have same if at your dis-- LUMBER COMPANY.

This concern has been advised that the use of hardwood for paving purposes is still decidedly in the experimental stage. The wood paving block industry was built on the basis of pine and fir blocks, and it has been rather difficult to get a favorable hearing for hardwood blocks. The main experiments along this line so far as actually introducing the blocks is concerned have been made by the Chicago Creosoting Company of Chicago. The United States Forest Service has conducted actual experiments as to the possibility of using hardwoods and has found that they are readily adapted to use for paving

The Chicago Creosoting Company has found that maple makes the best of these blocks and it is understood that birch has been successfully used. Stock for paving block purposes should be gotten out in the form of 4" planks 5"-10" wide and 8 feet up in length .- EDITOR.

B 612-Wants Oak Flooring Strips

WASHINGTON, D. C., Nov. 10 .- Editor HARDWOOD RECORD: We would appreciate if you would advise us the names of two or three concerns who manufacture 3/8" oak flooring strips dressed on two or four sides but not tongued or grooved.

Anyone interested in this inquiry may have the name upon application .- Editor.

B 613-Manufacturers of Oak Logs on Pacific Coast

A short time ago HARDWOOD RECORD received an inquiry requesting the names of firms on the Pacific Coast importing Japanese oak logs, sawing them there. HARDWOOD RECORD asked the Forest Service office at San Francisco, Cal., for this information and has received the fellowing reply:

San Francisco, Cal., Nov. 18 .- Editor HARDWOOD RECORD: Five firms on the Pacific Coast are engaged in the Japanese oak trade. These are:

Emerson Manufacturing Company, Portland, Ore. Western Hardwood Lumber Company, Los Angeles, Cal. White Brothers, Fifth and Brannan streets, San Francisco, Cal.

Edward F. No., is & C. The [563] Brannan street, San Francisco Ca E. A. Howard & Co., 22 He ward street, San Francisco Cip.

I understand that recently Japan has developed the sawmill industry to such an extent that lew logs are being shipped at the present tu-Japanese oak lender ranting from I meh up in thickness is the procipal product. I believe this is due to the fact that the Japanese have made a prohibitive price on logs in order to compel users of Japanese oak in this country to purchase the manufactured article.

I understand that the prior of logs delivered in San Francisco runs it on \$32.50 to \$40 per thousand feet. I am unable to give you the amount of lumber manufactured by the Process a Manufacturing Company the Western Hardwood Lumber Company, but I believe the others listed handle about 5,000,000 feet annually. G. S. SMITH,

Assistant District Forester

Clubs and Associations

Meeting New York Forest Products Association

The Empire State Porest Products Association, composed of nearly all the prominent up-state lumber and paper manufacturers, held its annual meeting at the headquarters of the Merchants' Association, Woolworth building, New York, November 13. A banquet at the McAlpin in the evening closed the convention of this organization which has shown such an active interest in conservation of natural resources of the Empire State

The following officers were elected to serve for the next year:

PRESIDENT—Frank L. Moore, Waterfood in the local year.

Vice-President—E. J. Jones, Bradford, Pa.

Secretary AND This set art: 41 J. cadwell, Carthage, N. Y.

Directors—Rufus L. Sisson, Potsdam, N. Y.; G. P. Gould, Lyons Falls,
N. Y.; Charles L. Moore, Now York City, Perris L. Meigs, New York City,
F. B. Wilder, Carthage, N. Y.; E. J. Jones, Bradford, Pa.; Frank A. Cutting, Boston, Mass.

The meeting occupied part of the forenoon and all the afternoon. There were addresses on all the questions of conservation by prominent public officials and members of the lumber and paper industry

Instructive Meeting Philadelphia Exchange

The regular monthly meeting of the Philadelphia Lumbermen's Exchange was held in the evening of November 6, President Benjamin Stoker in the chair. These evening meetings which were only tentative have proved a positive success as the augmented attendance bears witness, and there is no talk of a return to the long time afternoon session. A supper of fine appointment was served at 6:30 on the first floor of the building, after which the meeting was called to order in the exchange rooms. After the reading of the minutes, a communication from the National Rivers and Harbors Congress was read requesting the exchange to send delegates to represent the exchange at the eleventh annual meeting of the congress, to be held at the New Willard hotel, Washington, D. C., December 3, 4 A resolution directing the president to appoint delegates as requested was adopted. Frederick S. Underhill of the railroad and transportation committee then read the report of his committee, and offered the following resolution, which was adopted:

Weighters, The improvements in South Philadelphia, in accordance with plans defined by the Department of Public Works, are of such great benefit to the city, such as the removing of grade crossings, amplifying dock facilities, etc., leading to vast developments in the down town district, be it Resoutory. That the Lumbermen's Exchange of Philadelphia recommend to councils the favorable consideration of the plans proposed by the Department of Public Works, and particularly recommend the extension and operation of the Belt Line Company, as set forth in Article 16.

Mr. Underbill, as chairman of the committee representing the exchange at the fire prevention convention, then read an interesting report of the work accomplished by that body, after which in conformance with the previous announcement of President Stoker, that as a new and interesting feature of these meetings, instructive talks on the methods of business in the past and those employed at the present time would be given by experienced lumbermen for mutual enlightenment. Robert G. Kay, president of the Kay Lumber Company, and also an ex-president of the exchange, was called upon for something concerning the wholesale lumbermen. Mr. Kay was listened to with much interest as he tackled the question, whether the wholesaler should or should not sell to the consumer. He maintained that no wholesaler should sell direct to consumers, and conditions and price satisfactory, no retailer ought to buy direct from the manufacturer. He gave instances where the retailers went to the manufacturer and brought low-grade lumber cheaper than wholesalers could buy it, and then sold it at very little profit to contractors and According to the old methods when prices were fixed, Philadelphia wholesalers and retailers, and retailers of New York and New Jersey sold Virginia spruce and made money. The wholesaler and retailer should make more money on the capital invested, and a square deal should be the foremost rule of every member of the exchange.

William C. MacBride, president of the Haney-White Company, spoke In behalf of the retailer. At the start he said he believed every Philadelphia retailer should buy of the Philadelphia wholesaler, and that the former could afford to pay the latter a little more money. He dwelt on the methods of selling, delivery and collections, and especially referred to the great work done by the credit bureau system established by the

exchange. He said there ought to be a better return of profit on the amount of money invested in the lumber business. If the competiter wants of the members should be a source of pride to every member

Herbert N. Casson, vice president of the H. K. McCann Company, New York, who attended the meeting as the guest of Owen M. Bruner of the Owen M. Pruner Company, gave the boys an interesting talk on the preof trade to buy direct from the manufacturer as stated by Mr. Kay, Mr. Casson humorously compared it to jumping over each other's backs or playing at leap rog. He took issue with the manufacturers trying to eliminate the wholesaler or jobber, which he regards as a farce. The manufacturer does away with the jobber, then he buts on a manufacturer's agent to handle his goods; the manufacturer's agent then becomes the jobber, and the manufacturer is just where he was before. Mr. Casson urged association work, and deployed price cutting as a big mistake. His remarks were much appreciated by all present, and a vote of thanks were extended, after which the meeting adjourned.

Annual National Chamber of Commerce

The Chamber of Commerce of the United States will hold its annual meeting at Washington, D. C., at the New Williard hotel, February 11, 12 and 13. The National councilors will meet previous to the general session for the purpose of approving of the efforts of the Chamber during the past year, and to make program arrangements for the convention This meeting will take place on Tuesday, February 10.

Louisville Club Elects Officers

On Wednesday, November 12, the Louisville Hardwood Club met in annual session for the purpose of electing new officers and transacting other business. Edward L. Davis, retiring president, was nominated for reëlection, but requested that his name be left off the slate, stating that he considered a single term long enough for the services of any one person. He in turn presented for nomination Stuart K. Cecil, secretary and treasurer of the Booker-Cecil Company. Mr. Cecil was elected by a decided majority when the ballot was cast,

The new president is one of the youngest men in the lumber business in Louisville, being only twenty-nine years of age. He is a graduate of Princeton of the class of 1906. His start in the lumber business was in connection with the Norman Lumber Company of Louisville, with which concern he was identified until the Booker-Cecil Company was organized about two years ago. Mr. Cecil, in spite of his comparative youth, is slated as having the ability to make an excellent presiding officer.

H. E. Kline, superintendent of the Louisville Veneer Mills, was elected vice-president, succeeding his father, D. E. Kline, president of that concern.

C. M. Sears was elected treasurer of the club for the sixth succeeding term.

G. D. Crain, Jr., was reëlected secretary.

In Appreciation

The building committee of the Lumbermen's Association of Chicago submitted a report on the progress of its work in connection with the proposed Lumbermen's building to the board of directors of that association at its meeting held on November 10. It was shown that the committer has already signed up for 40,000 square feet of floor space, and has immediate prospects of securing some 5,000 square feet additional.

The board recognizing the many business sacrifices that the committee has made in working for the success of the building project, adopted the following resolutions

Isolowing resolutions:

RESOLVED, That this board of directors tender its sincere thanks to the building committee for its untiring efforts and business sacrifices in working to secure a building that will be of great credit to the lumber trade of Chicago, and be it further

RESOLVED, That a vote of thanks be tendered Hardwood Record, American Lumberman. The Lumber World Review and the Southern Lumberman, through the committee, for their great assistance and for the generous manner in which they have given publicity.

It was further resolved that a copy of these resolutions be sent to the papers referred to

Annual Meeting of Lumber Exporters

HARDWOOD RECORD is in receipt of an announcement from the National Lumber Exporters' Association stating that the fourteenth annual meeting of that organization will be held at Chicago January 22 and 23, 1914. Seemingly no definite plans have been made as to program and specific location of the convention headquarters, but it is anticipated that further announcements will be forthcoming shortly stating more specifically what the exporters have in mind.

National Lumber Manufacturers Retain Dr. Von Schrenck

I) is announced that the National Lumber Manufacturers' Association has retained Dr. Hermann Von Schrenck of St. Louis as technical engineer of the association. To him will be referred all technical matters concerning the mechanical and chemical problems regarding lumber and its treatment. Dr. Von Schrenck is too well known in the lumber trade to need any introduction. His new connection with the National Lumber Manufacturers' Association will materially strengthen that association in the authoritative position it now holds in connection with the lumber industry.

National Association Inspection Records

He growth of the Nitter. Hardwood Lumber Association during the 1 st seven veirs is better illestrated by connurrison of figures on insued tion as compiled by the secretary than by the mere bulk growth of the association. These agures show the total number of feet of lumber passed upon by the inspectors of the association each fiscal year from 1904 to 1915 They are as follows:

											Feet.
Year ending May.	15005										95,822,935
Year ending May,	1906										97,631,848
Year ending May,											120.186,828
Aear ending June,											.106,908,013
Year ending June,											.400.287,661
Year ending June.											.113.786,454
Year ending May,											
Year ending June											.132.844.256
Year ending June,	1913										.179,933,391

The inspection done by the inspection bureau for the month of October, 1913, showed a total of 14.161.471 feet inspected, which is a slight reduction from October, 1912. The work of the salaried inspectors is practically the same as that performed in October last year. But the fee inspectors at lake ports in Michigan did less than a year ago, which is in part due to unfavorable weather conditions. The total number of feet inspected by salaried inspectors was 8,292,706 feet and by fee inspectors 5,868,765. The total of reinspections as performed by the chief inspector and assistants was 223,785 feet.

Election Baltimore Exchange Pending

The new ticket of the Baltimore Lumber Exchange, to be voted for on the evening of December 1, is out, having been put up by the nominating committee, and so far no signs of an insurgent movement are in evidence. It seems a foregone conclusion, therefore, that the regulars will be successful. The make-up of the ticket is somewhat of a departure from the past few years, inasmuch as some of the younger members of the trade, who have not heretofore held official positions, have received recognition. and altogether, the list has elicitated favorable comment. The ticket is as follows:

PROSIDENT Ridgaway Merryman.
VICE-PRESIDENT—Rufus K. Goodenow of the Canton Box Company.
TREASTREET—Luther H. Gwaltney of the American Lumber Company.
MANAGING COMMITTEE—Lewis Dill, Lewis Dill & Co.; Edward P. Gill,
William D. Gill & Son; Rufus K. Goodenow; William M. Burgan; Theodore Mottu, Theo. Mottu & Co.; H. Rowland Clapp, J. H. Thiemeyer Company; Parker D. Mix, Surry Lumber Company; George E. Waters, Geo. E.
Waters & Co.; Henry Suchting, W. E. Suchting & Sons, Inc.; John L.
Alcock, John L. Alcock & Co.; J. Clay Gilbert, J. L. Gilbert & Bro. Lumber
Company, and Henry D. Dreyer, H. D. Dreyer & Co.

The annual meeting of the exchange will be held, as usual, at the Merchants' Club on German street, and after the transaction of business a dinner will be served.

Meeting Lumbermen's Club of St. Louis

The Lumbermen's Club of St. Louis held a business meeting Tuesday afternoon. November 11, in the club rooms, at which there was a large attendance. Several important matters came up. The following resolution, recommending that Congress pass proper legislation to improve the Mississippi river to prevent annual floods was passed:

WHEREAS? The Democratic, Republican and Progressive parties in their 1912 platforms declared that flood protection of the lower Mississippi river and the reclamation of its alluvial lands was a national obligation, and

WHEREAS, We believe these declarations should be enacted into legislation, and WHEREAS, We believe the protection of this vast area from floods caused WHEREAS, We believe the protection of this vast area from floods caused

WHEREAS, We believe the protection of this vast area from noods caused by the drainage from thirty-one states of the Union, and its reclamation will benefit the whole nation, and is a work of such magnitude that it, justifies separate treatment; therefore be it.

RESOLVED, That this association urge upon Congress the immediate adoption of legislation for flood protection and reclamation of this sec-

tion of our country. The Forest Products Exposition to be held at Chicago, April 30 to

May 9, 1914, and in New York, May 21-30, was indorsed. President Whitmarsh appointed the following delegates to the National

Conservation Congress: W. E. Barns, E. C. Robinson, S. H. Fullerton, C. A. Antrim, C. M. Jennings and Dr. Hermann von Schrenk. Capt. J. B. White and R. A. Long of Kansas City, Mo., and Julius

Seidel of St. Louis were thanked for their addresses given at the banquet of the clab on October 28.

It was announced that the next monthly meeting of the club would be held on December 9, and that it would be ladies night. The annual election will also be held at that time. Two nominating committees were selected. The one appointed by President Whitmarsh was made up of P. F. Cook, C. M. Jennings and George R. Hogg. The one nominated from the floor was composed of Guy Fulton, Hendrick Folinie and G. P. Shehan.

Annual New York Association

The annual meeting of the New York Lumber Trade Association on November 12 brought out a large number of the local trade. About 115 members, wholesale and retail, sat down to lunch in the association rooms preceding the meeting. It was a record attendance and fixes the place of this annual event in the routine of the market.

President Perrine called the meeting to order at 2:30. business was the report of the trustees, which covered in detail the work of the organization for the past year. The report stated that the membership now includes ninety-five retailers, eighty-three wholesalers, and eighteen nonresidents. The credit system which has been in force is

pronounced satisfactors, and less been of great assistance to the members in carrying on business

The bureau of standardization of the Board of Estimate and Apportigurent of the city of New York has been in conference with a committee of this association representing the different kinds of woods with reference to getting up a set of specimentions to govern the city departments in their purchases of timber and lumber. The committee has met the representatives of the board a number of times and has agreed on a set of rules which it is hoped will be approved as being a fair and equitable standard and which will eliminate the troubles and difficulties in grades in dealing with the city departments.

The association presented arguments before the building committee of the New York board of aldermen, against proposed changes in the building code which would tend to restrict the use of wood in tall buildines of that city.

The legislative committee of the association has carefully scrutinized all bills coming before the legislature at Albany, and has taken necessary measures for amendment of such as appear inimical to the interests of the association.

Labor troubles during the past year have been few and of little consequence. An employment bureau is maintained for the benefit of members,

The government suit against the association is now in the United States Supreme Court where arguments have been submitted on briefs. The government won a technical victory in the lower court, but the judgment did not dissolve the Eastern States Retail Lumber Dealers' Association, or any of the associations, and will not materially interfere with the work of the Lumber Trade Association. The trustees express confidence that the final judgment will be favorable.

The election of officers resulted in the re-election of the old encumbents, with Charles Grosskurth and George H. Storm elected to the board of trustees. The officers are: President, Russell Johnson Perrine; first vice-president, John F. Steeves; second vice-president, Frederick W. Starr; treasurer, Charles F. Fischer.

After the election Attorney Cruikshank addressed the meeting. reviewed in detail the case of the government against the eastern retail associations and expressed the hope and belief that the decision of the Supreme Court, before which body the case now is, would be favorable to the defendants.

Of special interest was the unanimous vote to hold a dinner this year. For different reasons the last two years went by without this affair and the spirit shown when the question came up assures the success of this year's banquet. It is hoped that the grand ball room of the Hotel Bossert will be ready for the lumbermen, and no other body can more appropriately christen the new banquet hall of the handsome hotel built by the late Louis Bossert, who was a prominent figure in Metropolitan lumber circles.

Last Match Philadelphia Golfers

By courtesy of E. W. Swenk, F. A. Benson and others, the Philadelphia Lumbermen's Golf Club, held its last game of the season on the links of the Athletic Club of Philadelphia at Manoa, Delaware County, on November 11. The day was cold and blustery, but what is wind and weather in the nostrils of the husky athlete. Twenty-four golfers formed into six four-somes and the competition was a lively one. After the game an elaborate dinner was served, which was followed by the business meeting with President Eugene W. Fry in the chair. W. P. Shearer, with a net score of 84, won first prize, a silk umbrella; J. E. Troth was awarded second prize, a stick pin, for a score of 87 net, and H. G. Parker, who made his first winning as a golfer, bore off third prize, a box of handkerchiefs, score 89.

Memphis Club Entertains

The entertainment committee of the Lumbermen's Club of Memphis made excellent work of the job of putting up a suitable and interesting program and line of refreshments for the visiting clubs of Nashville and Louisville, which clubs visited Memphis on Friday, November 14. In addition to these distinguished visitors, Memphis also entertained on that day a great many of the conferees at the meeting of the red gum manufacturers which was held on the following day, Saturday, November 15.

The committee was aided by excellent weather and had provided all sorts of interesting features. The guests were met at the Hotel Gayoso at 10 o'clock Friday morning with automobiles and were given a ride over the Memphis boulevard system, returning to the Country Club for luncheon. At this function there were over sixty visiting lumbermen in attendance, but their wants were fully taken care of. During the luncheon the cars waited at the Country Club and took the visiting lumbermen back to the hotel.

The annual banquet of the Memphis club was held in the evening at the Gayoso hotel, and including the members and out-of-town guests there were over two hundred in attendance. In addition to a most excellent menu, the entertainment committee had arranged for orchestral entertainment and also had provided excellent vocal talent. The orchetsra consisted of ten well played instruments, while on the vocal program were Mrs. E. E. Greenwood Warden, soprano; Miss Aileen Shea, contralto; Giordano Pellonari, tenor, in addition to an excellent male quartet.

Following the usual lumbermen's gastronomic efforts, President J. M. Pritchard of the Memphis Lumbermen's Club asked Max Sondhelmer of Memphis to say something, and suggested that he propose a toast. President Pritchard gave as his excuse for calling on Mr. Sondheimer the fact that that worthy gentleman would be apt to have something to say

anyway at some time during the evening, and he proposed to give him a legitimate excuse

Mr. Sondheimer responded warmly and proposed that those in attend ance drink a toast to the lumber business, summarizing the idea of the toast with the expressed wish that "something might be doing pretty soon," and it is needless to say that with one accord the visiting and resident lumbermen drank this toast standing.

President Pritchard then called on various local and visiting celebrities. Including W. H. Conley and C. P. J. Mooney, editors of Memphis dailies; John Tuthers, secretary of the Business Men's Club; C. F. Davis, Louisville lumberman; W. E. DeLaney, Cincinnati, president of the Hardwood Manufacturers' Association of the United States; Frank F. Fish, secretary of the National Hardwood Lumber Association, Chicago, and James Baird of Nashville.

With the Trade

Death of A. W. Mowbray

Happwood Record regrets to announce the sudden death of Albert W. Mowbray, vice-president of the Johns-Mowbray-Nelson Company, Cincinnati, O. Mr. Mowbray was taken ill Sunday night, November 9, while at Greenville. Miss., on business in the interests of his company. He developed double pneumonia and died Saturday night, November 15. The interment was at Peru. Ind., the place of Mr. Mowbray's birth.

Mr. Mewbray was a son of Mr. and Mrs. W. E. Mowbray and is survived by a widow, Mary C., a daughter, Nellie, aged three, and son, Albert, Jr., aged one. His parents are also still living and reside in Peru. The deceased is also survived by three brothers, Fred W. of the Mowbray & Robinson Company, Cincinnati, O., O. Ralph, professor of languages. Chicago University, and Merrill of Chicago, and by two sisters, Miss Clara Mowbray and Mrs. Stella Tretier, Peru. Ind.

When Mr. Mowbray was seventeen years old he went to work with the Mowbray & Robinson Company, and starting in at the very bottom by diligent work and ambitious effort acquired an intimate knowledge of all departments of the hardwood business. After leaving the employ of the Mowbray & Robinson Company he spent several years as an inspector, buyer and salesman for different hardwood concerns. Two years ago, specifically, November 29, 1911, he with Walter E. Johns and Coleman C. Nelson organized the Johns-Mowbray-Nelson Company, which concern started business as a wholesaler and manufacturer of hardwood lumber with offices in the Provident Bank building Cincinnati. The expansion of the firm's interest necessitated enlarging facilities, and several months ago the offices were moved to the newly equipped yards at Eighth and Horn streets, Cincinnati. The company's affairs were just rounding into good shape and promised to result in an unusual success, when Mr. Mowbray's untimely death occurred.

John H. Marble, Commerce Commissioner, Dies

John H. Marble, who has been prominently connected with the administration of the affairs of the Interstate Commerce Commission for years, died at his home in Washington, D. C., at 6 o'clock Friday night, November 21. His death came unexpectedly and was the direct result of uraemic

Mr. Marole's career has been a highly honorage one and his exceptional qualities and abilities have enabled him to handle with pronounced success the varied and intricate affairs of the Interstate Commerce Commission

In connection with this body he has become well known to the big lumber interests of the country, and has been highly thought of by the shipping interests because of his absolute fairness in the way he handied matters.

W F. Heyser in New Enterprise

One of the most important lumber enterprises launched in this section recently is that of the Issaquena Lumber Company, which has been organized to operate a big hardwood mill at Issaquena, Miss. The incorporators are W. E. Heyser of the W. E. Heyser Lumber Company, Cincinnati, Weaver Haas, at one time local manager of the interests of W. E. Heyser Lumber Company, and James L. Pierson, an experienced logger and timberman. The plant consists of a band saw and resaw and the company has already secured control of about 65 000 000 foot of timber. Logging operations have begun on a large scale. The company is capitalized at \$100,000 and the entire output of the new plant will be handled by the W. E. Heyser Lumber Company, with headquarters at Cincinnati

Meeting of Creditors

The announcement has just been received from Charles T. Greve. referee in bankruptcy, in charge of the defunct Maley, Thompson & Moffett Company, Cincinnati, of a meeting of the creditors which is to be held in the offices of the referee, 22 Peru building, Cincinnati, December 5, at 1 o'clock p. m. There will be taken up at this meeting the consideration of offers for the purchase of the assets of the company, and also matters with relation to the distribution and allowance of compensation and declaration of dividends, and all matters with relation to the compromise of claims in favor of and against the estate of the bank-

Creditors are directed to have all matters in controversy ready for consideration at that meeting.

Buffalo Concerns in Receivers' Hands

On November 22, the Blue Grass Lumber Company, Inc., and the Empire State Hardwood Lumber Company, Inc., both with main offices in Buffalo, N. Y., filed petition in voluntary bankruptcy before Judge Hazel in the Federal court and pending the appointment of trustee, Messrs. Roland Crangle and Frank Gibbons, both of Buffalo, were appointed receivers for the respective companies

Early in November at a called meeting of stockholders and directors of the two companies it was decided to call a meeting of creditors and the above action was determined upon at said creditors meeting on November 21. C. M. Clark of Cincinnati, who has for the past few weeks been in Buffalo representing some large stockholders in the South, looking into the affairs of these companies in the capacity of temporary vice-president, was asked at this creditors meeting to allow his name to be presented to the court for the position of receiver, but he declined.

It is understood the affairs of the Blue Grass Lumber Company and the Empire State Hardwood Lumber Company are badly involved and the liabilities will be far in excess of the assets. The Blue Grass Lumber Company handled western pine and the Empire State Hardwood Lumber Company dealt largely in hardwoods.

MOWBRAY, NELSON COMPANY, CINCIN-NATL O.

THE LATE A. W. MOWBRAY OF THE JOHNS. J. M. PRITCHARD, PRESIDENT MEMPHIS CLUB, HOST TO NASHVILLE AND LOUIS: VILLE CLUB AND RED GUM MEN

W. E. HEYSER, CINCINNATI, O., INTER ESTED IN THE ISSAQUENA LUMBER COMPANY, ISSAQUENA, MISS.

New Handle Factory

. Fig. income of the environment of the first property of the first property of the first property of the environment of the e out the new factors will be in open tick within a few works. The plant wit in instacture handles for spides and Toyets

which mill we continue in of ration as in the part, but if buildings and equipment will be remodeled throughout. Mr. Haas is planning to make a considerable expenditure for remodeling buildings and installing new machinery and equipment. This work has already been stacked and the entire remode the will be completed within a short time when it is expected the mill will be in operation.

New Plant at Little Rock

Sandberg Brothers of Chicago, manufacturers of interior trum, sash, doors, etc., have decided to erect a plant at Little Rock, Ark. The company will construct its mill on the property owned by the Factoria Land Company, and will have two acres of land adjacent to the Iron Mountain This tract is immediately adjacent to that recently purchased by the Slimmer Manutacturing Company, also of Chicago. The new plant will give employment to about fifty men to start with.

As to the reason for moving the company ascribes this policy to the saving it will effect in the cost of raw material. This is another in stance illustrating that northern remanufacturing concerns are awaken ing to the fallacy of the position of having their raw material shipped long distances to them, and reshipping the finished product in many cases to points close to the towns from which the raw material was sent

Buys Mississippi Timber

The Merrill Timber Company of Pittsburgh, Pa., recently closed for the sale of 10,000 acres of hardwood and pine timber in Madison county. Mississippi, to the Crosby-Bonds Lumber Company, Brookhaven, Miss., and J. T. Toney of Hazlehurst, Miss. The consideration was \$350,000.

The purchasers are planning the immediate erection of two sawnills on the property. The pine mill will be operated by Mr. Crosby, while the hardwood mill under Mr. Toney will have his jurisdiction. It is also planned to construct twelve miles of railroad into the timber connecting with the Illinois Central railroad at Canton.

William H. White Company in Financial Trouble

Petitions have been filed to have the Michigan Trust Company of Detroit, Mich., appointed receiver for the William H. White Company of Boyne City, Mich., and the Boyne City, Gaylord & Alpena Railroad, with headquarters in that city also. The meager information available states that the liabilities are \$2,000,000, but that the assets are greater than the liabilities.

This company has probably been caught by the same financial stringency that has embarrassed various other large operating concerns during recent months.

Price & Hart Dissolved

The name of Price & Hart, for over a quarter of a century one of the best known in the domestic and export hardwood trade, was stricken from the list of local firms when Walter T. Hart, proprietor, announced his retirement. Mr. Hart has other interests which take his attention in the future. The firm of Price & Hart was established by the late Ernest M. Price and Mr. Hart in the '80's and has always held a high place in the trade. Mr. Price was one of the organizers of the National Lumber Exporters' Association and had served as president for several terms. The firm was the second to join the National Wholesale Lumber Dealers' Association. Price & Hart have always done a large export trade in thin poplar and ash and plain and quartered oak.

Elwood Jones, for seventeen years with the firm, will take up the business under his own name, with headquarters at the old stand, 18 Broadway. His long association with Price & Hart well fits him for the enlarged responsibilities, and his many friends are congratulating him in

Pertinent Information

Bill to Compel Through Bills of Lading

Officials of the Southern Hardwood Traffic Bureau and shippers of hardwood lumber in general are very much interested in the bill which has been introduced into Congress by K. D. McKellar of the Tenth Tennessee Congressional District, and which has for its purpose the compulsory issuance of through bills of lading by the railroads on export shipments of lumber. Congressman McKellar points out in his comment on the bill that the railroads have been delivering exports of hardwood lumber to the ports under one contract and that these cargoes have been sent across the water under other contracts with the steamship companies, with the result that there has been unnecessary delay and expense at the ports where charges of every kind have been piled up. He says that, under the terms of his measure which has already received the endorsement of the committee on interstate and foreign commerce, it will be necessary for the railroads to issue through bills on export shipments of lumber and that the steamship companies will have to transport such shipment manedhately of effect array, in New Orleans or other ports. In drawing this bill Mr. McKellar has been in close touch with officials and other members of the Southern Hardwood Traffic Bureau whose interests are vitally affected by the bill of lading subject, with particular reference to through bills. Tennessee lumbermen export a large amount of lumber every year and it is estimated that a blg saving will result if the railroads are prohibited from billing export shipments of lumber to New Orleans and other ports on local ladings. The bill, as drawn, fol-

Section 1. That in all asses where any freight or commodity is offered to a common carrier to be transported by it to some port of the United States and theme as stemening carrier to a foreign port such initial carrier is hereby required to issue a through bill of hading providing for shipment of such treight or common arrier to port of destruction and all strainship carriers designated in some first of the port of the foreign fairly out such contract of carriers in the point of the port of the point of the

mitted to use the ports of the times comes seemed.

Section 2. That where any freight or commodity is offered to any carrier for shipment to any part of the United States and thence to any foreign port, such initial carrier and the steamship company are required to receive and transport all such freight or commodity on terms of equality, and no discrimination shall be made by either initial carrier or steamship carrier in the prompt acceptance, shipment and delivery of any one commodity over any other commodity.

Section 3. That violation of this act shall be punishable by fine of not less than \$500 or more than \$1,000 for each separate offense.

Plans Definite Policy on Rate Advance

Secretary J. E. Rhodes of the National Lumber Manufacturers' Association has issued a statement covering the progress of the generally desired horizontal increase of freight rates. As announced previously in Hardwood Ricord, all proposed advances to have become effective November 15 have been suspended until March 12, 1914, the hearing having been slated to begin yesterday, November 24, at Washington. About 22,000 amendments of tariffs have been filed and as they are not yet classified it will not yet be possible for Mr. Rhodes to issue a list of the lumber rates affected, which action, however, he purposes to take up as soon as possible.

The statement contains suggestion that the railroad committee of the National Lumber Manufacturers' Association is anxious to learn to just what extent the lumber manufacturers of the country are willing that that committee should represent them in this matter. The committee according to the statement is willing to represent the lumber interests but will not do so without specific authority. The statement then outlines the status of the situation, stating that all lumber manufacturers are in favor of the railroads deriving more ner revenue; many are in favor of the advances in lumber rates provided rates on other commodities are also advanced: many are unwilling to consent to advance in lumber rates without first knowing what other rates are to be advanced and to what extent: some are opposed to any advances on lumber rates on the ground that they are relatively higher than on other bulk commodities: many feel that this whole subject should be taken up by the National association and that the railroad committee, upon which all of the affiliated associations are represented, should announce a definite policy to be pursued; and many believe that because all lumber rates of the country are involved thus it becomes a subject of national importance and should be taken up by one body

The statement requests that all members of the association affiliated with the National association communicate with their respective secretaries as to their views on the matter and state that if it is thought best to delegate to the railroad committee of the National association authority to represent all of the affiliated associations, the committee will desire active co-operation from those associations. Further, the committee will not oppose advanced rates on lumber unless that is the desire expressed by the majority of the combined membership.

Michigan Lumber Rates

The proposed advance in the rates on lumber in carloads between points in the lower peninsula of Michigan and from points in the lower peninsula of Michigan to all territory has been suspended by the Michigan Railroad Commission and the Interstate Commerce Commission until March 12, 1914.

The situation in lower Michigan covering lumber rates is somewhat different from that in other competitive lumber producing territory, for the reason that for the last twenty years lumber rates have been checked-in on a basis in many cases less than sixth class and especially does the proposed increase basis made by the cancellation of the old lumber commodity rates and the application of the new proposed sixth class basis make the advances to important consuming points, where the heavy tonnage is moving, not five per cent but in many cases ten, fifteen and even thirty-three and one-third per cent.

Owing to the non-uniformity of basis for class rates in the lower peninsula of Michigan, the Michigan Railroad Commission some time ago asked the railroads to revise their class rates, putting them on a more uniform basis, which if put into effect as proposed will make quite a difference in the alignment of the lumber rates and for that reason the new rates are not meeting with the approval of the lumber shippers. It is true there are some points where the present rates are not disturbed, others where a slightly less rate will be applied under the new basis than under the old, but if we take into consideration the proposed advanced rates to where the tonnage is moving at the present time, there is an undue advance which should not be allowed. Then on interstate traffic rates to basing points in Wisconsin, upper Michigan and Minnesota have

been made from a restant to the tental an eaper perimes and Maria and old Wisconsin to same destinations, therefore the proposed advances have been protested and it will be up to the railroads to show the reasonable Dess to F such solve to

It is expected that the Michigan Railroad Commission will not take immediate action on Michigan rates until it is known how the Interstate Companie Colombias I wi well to state that lumbermen in many localities are of the opinion that the present basis on lumber in comparison with other commodities, taking into consideration the loading and unloading being done by shipper and consignee, the heavy tonnage per car, small proportion of loss and damage claims, a large portion of the lumber carried in flat or gondola cars, should take a basis less than sixth class in official classification territory.

The railroads in lower Michigan seem to have taken advantage of the proposed change in rates, cancelling all of their commodity tariffs, issuing new ones or letting the classification take care of the rates, which means an advance of from five per cent and running as high as twenty per cent, so taken as a whole the shippers of Michigan will not re ceive a uniform five per cent advance, but will be obliged to take care of a considerable higher rate and it appears that as soon as shippers deawaks to the actual situation many in ire profests will be filed

Court Decision Favors Open Shop

The decision of the Federal District Court in session in this city in the case of the non-union trim manufacturers against the United Brotherhood of Carpenters and Joiners of America, the Master Carpenters' Association and the Manufacturing Woodworkers' Association resulted in a victory for the open shop and the trim manufacturers. The case has been before the courts for over two years and is considered one of the foremost labor cases ever brought in the courts of the country. The case was known as the Irving & Casson case. Irving & Casson are manufacturers of artistic wood trim, with headquarters in Boston. They had the contract for some of the interior finish in the Cathedral of St. John the Divine and one of the new halls of the Military Academy at West Point. They have always conducted an open shop in the manufacture of their trim and it was proven that the union had entered into a combination to prevent them from selling or installing their product outside of Massachusetts; that in pursuance of such conspiracy the company was placed on the "unfair list"; was threatened with sympathetic strikes on the above mentioned jobs and in other ways intimidated. The decision in this case, by Judge Ward, makes permanent the temporary injunction previously rendered and goes even further, for the court held that the defendants also violated the Sherman anti-trust law, and the anti-trust and penal law of the state of New York, which makes any and everybody to the alleged agreement a criminal conspirator and opens the way for the complainant to recover treble damages for injury proven to their business.

This latter side to the question is of special interest because Louis Bossert & Sons, trim manufacturers of Brooklyn, have a similar case now pending in the courts and have filed a suit for \$200,000 for damages their business through strikes, boycotts and other practices under this agreement.

The case of the Paine Lumber Company and other non-union manufacturers of trim against the same Carpenters' Union and their agreements, was dismissed and injunctions denied. Judge Mayer, in this case, held that the complainants did not show that they were singled out for attack or that they had suffered differently than the public at large, therefore any offence committed against them was a public offence and only public officials could prosecute. Judge Mayer agreed with Judge Ward that this combination resulted in restraining competition between manufacturers and operated to restrain interstate commerce and violated the Sherman anti-trust and state business law. On the other hand he found that he could not grant the injunction in the Paine case because that might be sought legally only at the instance of the United States or the state of

Wisconsin Compensation Act Fails to Work

Employers in general are interested in the decision of the Wisconsin Supreme court in the case of Henry Miller vs. the city of Milwaukec. Miller, a poor man aged sixty-six years, was working for the city in the street department and his foot was run over by a steam roller. It was badly crushed and the great toe was amputated. For over two months the old man could not leave his bed and for more than five months could not work. A doctor attended to him for over ninety days, the time fixed by the compensation act. The law requires the employer to furnish medical attention at the time of accident and for ninety days after and failing to do so "seasonably" is liable for the medical expense, also that sixty-five per cent of the wage shall be paid weekly. The city waited forty-eight days before it sent a doctor and did not pay the wage required. The charge for medical services was \$222. The Supreme court decision criticized the medical charge as excessive, but allowed nothing. The commission had decided that the city had not furnished a doctor "seasonably" and made allowance for ninety days. The court held that the city of Milwaukee acted strictly within its legal rights. This leaves the injured employe to pay the debt as best he can.

"One of the most humane provisions of the workmen's compensation act, as we have understood it, has been swept away," declared Chairman Charles H. Crownhart of the Industrial Commission, commenting on the decision. "The great success of the act for two years is made abordustries of Wisconsin. To deal with this name r of men in a practical

Small Arkansas Roads Protest New Rates

The Arkansas Railroad Commission recently made an order, effective November 10, fixing a flat rate on rough materials, as reported in a previous issue of HARDWOOD RECORD. The rate is to apply on rough lumber, bolts, flitches and logs in carload lots, and is based upon the following scale. Two cents for the first twenty-five miles, and increasing November 6, the commission issued an order excepting a number of the smaller roads in the state from the decisions of the new tariff, allowing them to come in on November 17, and show why the rate should not 17, however, the hearing was not completed, but was deferred until January 12. The managers of the small roads had already filed with the Arkansas Railroad Commission applications to be negligibled to use a higher tariff than those rates set out in Standard Freight Distance Tariff No. 3, which was reissued by the Arkansas Railroad Commission on July 18 of this year.

Cooperage Strike in Arkansas Unchanged

The conditions existing at Paragould, Ark., on account of the strike of the mombers of the Coopers' Union at that blace, remains unchanged. The manufacturers are tenaciously holding to their original position, willing to concede nothing to their employes, because, as they say, the men have no real grievance. About the only contention that is now being made by the strikers is that they be permitted to deal with their employers through a committee. The continued disagreement and strike is seriously affecting the business interests at Paragould. Many of the business men have been drawn into the controversy, and are taking sides either with the manufacturers or the strikers. A number of prominent business men have openly derided the strikers, in their contention over this matter, which they regard as of little consequence. These business men are in hearty sympathy with the manufacturers, and are saying so in spite of the fact that they are being boycotted by members of the union and friends of the strikers.

J. C. Clary, commissioner of labor statistics of Arkansas, has undertaken to settle the contention between the employes and employers. In a letter which he recently addressed to the manufacturers, he suggested that an arbitration committee be selected, to be composed of two men representing the stave manufacturers, and two men representing the strikers, which four men should select a fifth. He proposes to submit all questions to this arbitration committee, also allowing the committee the privilege of making investigation of all matters leading up to the strike. and that each side agree to abide by the finding of the committee. So far no reply has been made to Mr. Clary's letter by the manufacturers.

Suggestion for the Woodlot Owner

- A prominent school of forestry suggests the following method to be employed by woodlot owners in estimating their standing timber:
 - 1. Count all the trees in a circle 118 feet across .- one-quarter acre.
 - 2. Select a sample tree as nearly average as you can.
- Determine how much of the tree you can saw in sixteen-foot logs (eight feet counts as half a log).
- 4. Add the top and bottom diameters inside bark and divide by two. This will give you the average diameter of the used length.
- Square this average diameter. Subtract 60, multiply by .8 and you will have the contents of an average sixteen-foot log.
- 6. Multiply by the number of logs in a tree and then by four times the number of trees on your plot and you will have the approximate contents of that acre in board feet.

The Circular Versus the Trade Paper

"Printers' Ink" in a recent issue hit at the root of a common mistake in modern merchandising. The article was quoted from an interview with an agency solicitor who, in view of preparing a trade circular, made a tour of the retail trade in the line to which the circular was to be devoted. He stated that some of the retailers he saw were getting fifty and sixty circulars a day-most of which went to the floor and were later swept out unopened. This particular expert stated that he had had some experience as to the waste of dealers' literature before but that the con dition today surpasses anything heretofore. He stated that the dealers are being frightfully over-circularized.

This condition, of course, is one noted among the retailers in other lines than lumber but it nevertheless must be true to perhaps a less

marked degree an counction with the brader business because of the claim made, in behalf of the circular, of "exclusive attention". The article compares the cost of getting out this plan of advertising literature with the cost of conservative advertising in the right trade paper mediums and scores a point in behalf of the trade press, stating that it represents an organized medium of publicity, compared to a clearing house or public market. The article points out another phase of the situation which HARDWOOD RECORD has maintained for years, -namely, that the growth of the advertising section of a trade paper does not militate against its efficiency but has the direct reverse effect in that because of the growth of the advertising section the revenue of the paper increases and hence affords a means for improving its prestige and power through improvement in general character of the publication. The article goes on to say that dollar for dollar, idea for idea, the opportunities for cashing in are much greater in the trade press than in the trade circular,

This opinion, coming from such an impartial medium as "Printers' lak." should at least command the attention of those lumbermen who are interested in modern ideas of merchandising,

Warns Against the General Use of Catalpa

The New York State College of Forestry suggests that during the past full numerous inquiries have been coming in regarding the value of hardy catalog for planting in central and northern New York. Many land owners have been induced to plant this tree because of statements regarding its rapid growth and durability, and without doubt much planting has been done that will result in failure.

The hardy catalog is a native of river bottoms in the Middle West where under favorable conditions it makes exceedingly rapid growth. The wood after thorough seasoning is very durable when used as fence posts or wherever it comes in contact with the soil. Because of its rapid growth and durability and because of the case with which nurseries propogate it from seed, it has been exploited very widely throughout the country. The college of forestry believes that it has been too widely planted in New York state. The hardy catalna is a specialized forest eron requiring good soil and more care than the ordinary farmer or land owner can give it If one is willing to devote two or three acres of good agricultural soil to this catalog and cultivate once or twice a year for the first three or four years as well as to prune it annually so as to force the trunk to make a clean upright growth, it will probably give fence posts in as short a time as any other tree in the state. However, it is not good policy to plant land of any agricultural value to trees.

To Prevent White Ants from Attacking Wood

The Bureau of Entomology, through its Branch of Forest Insects under the charge of Dr. A. D. Hopkins, has been conducting experiments with woods treated by various methods to determine how they may be protected from injury by our native white ants. Experiments are also under way to determine the immunity or relative resistance of various native and tropical species of untreated wood to white ant attack.

The specialist in charge of these experiments has submitted a report on the treated and untreated woods, which have been subjected to attack from white ants for from five to twelve months. Yellow pine stakes charred by burning for about five minutes were attacked at the end of one year, and this treatment only delays attack. Yellow pine stakes impregnated by the "open tank" method, with coal tar and wood creosotes; dipping and brush treatments with wood and coal tar creosotes; and stakes treated by two closed cylinder pressure processes with several different creosote compounds were not attacked at the end of one year. Untreated alternating check stakes were attacked by white ants.

An examination of test blocks, showed that after being buried in the ground with infested logs for nearly six months, some of the blocks impregnated with paraffine wax were attacked by white ants while wood treated with chlorinated naphthalene was not attacked. Untreated teak, greenheart and peroba test blocks-all tropical woods-were not attacked. while untreated white and red oak, sugar maple, birch, and red gum were attacked and more or less seriously damaged.

The Ginseng Craze

The American consul at Hongkong has made a report to this government on the ginseng situation which may be construed as a warning to persons who expect to get rich raising this root so highly prized by Chinese. The buyers on the other side of the sea refuse to pay as much for the cultivated article, and they are experts when ginseng is to be graded. They want the wild article, although they do not refuse to buy the garden product, but take it at a lower price.

"An idea among American growers which should be dispelled," says the consul, "is that ginseng is like any other root product which can be grown and marketed at so much per pound-so long as the root is firm and sound and free from mold and decay the better price will be paid for the firmer, larger, sounder root. Such is distinctly and definitely not the case. The value of ginseng is a matter of estimation; certain varieties in certain shapes and in certain conditions are esteemed the more highly. Into the determination of value enters not so much any actual virtue of the root-as a matter of fact the root in any shape and of any quality has very little real medicinal value-but what the Chinese regard as virtues, giving the root medicinal power.

"The central theory of the use of ginseng decoction is that it combines in itself the virtues of nature-wind, water, woods, the elements, and wild nature generally. Hence, the gnarled, twisted wild root is the ideal quality of the root, and any domesticated or cultivated variety is merely a substitute. This substitute ought to be as near like the wild as possi-If the root grows in the shape of or seems to bear some resemblance, even by severe stretch of the imagination, to some animal, it has increased virtue in the trade. For this and similar reasons it is necessary that the small head of the root joined to the rest of the root by a small neck shall remain a part of the product. Breaking off such little heads reduces the value of the root in this market by faily half, as a rule. The root should be packed so as to prevent such breakage. Root to be acceptable should at least be rough and wrinkled, with the roughness running around the root in circles or spirals."

Cultivated roots are smoother, more shapely, than the wild, and this very quality cuts their value in half. Market quotations at Hongkong in September of this year ranged from \$11.52 to \$8.64 for the wild root and \$7.56 to \$5.04 for the cultivated.

"The above prices are for recognized grades," continues the report, "Most American ginseng is received here ungraded and a large portion of it grades as refuse at \$0.90 to \$2.88 gold per pound. On the other hand extra fine wild ginseng would now bring \$18 to \$28.80 gold per pound. All the foregoing prices are simply comparative, but illustrate the course of the murket"

Woods Colored by Burying

Some of the manufacturers of furniture and interior finish in Germany have discovered that certain woods may be given an attractive and durable color by burying in the earth. The woods which thus far have shown the best results are oak, elm, birch and spruce. The process consists in taking green wood and burying it in soil with which lime and other materials have been mixed, where it is left buried five months or more. By that time a fine color has been imparted, and the wood is used without paint or stain. It has likewise undergone a process of seasoning and it shows little tendency to warp or check.

Hardwood News Notes

-----≺ MISCELLANEOUS ≻-----

The C. B. French Cabinet Company, of Brooklyn, N. Y., has increased its capital stock to \$50,000.

It is reported that at Lexington, N. C., the Piedmont Lumber and Furniture Company is organizing.

The Nagle Cabinet and Show Case Company has been incorporated at Jersey City, N. J., with \$25,000 capital.

The Mitchell Hardwood Lumber Company of Mitchell, Ind., is reported to have increased its capital stock to \$25,000.

The Massachusetts Novelty Company has been incorporated at Boston, Mass. This company has \$3,000 capital stock.

The Kirkham-Mattson Company recently began business in Ovid. Mich. The company will manufacture interior finish.

The Foster Chair Company has started business at Huntington, W. Va. This is an incorporated concern with \$75,000 capital.

The Henderson Brothers Lumber Company has incorporated at Clarksburg, W. Va. This concern has a capital stock of \$10,000.

The Florida Show Case Company has been incorporated at Tallahassee, Fla. The company has an authorized capital stock of \$15,000.

The Crossett Hardwood Lumber Company has been incorporated at Wilmington, Del. This concern will have a capital stock of \$500,000.

The Muskogee Wagon Wood Company is the style of a new concern at Muskogee, Okla. The company is incorporated and capitalized at \$50,000.

The Marion Bench and Cabinet Company has been incorporated at Marion, Ind. The company will manufacture the lines of goods as shown in its title and will operate with an authorized capital stock of \$30,000

The Appalachia Lumber Company of Columbus O. announces that after November 24 that concern will occupy suite 1914 in the Union Central Life Building, Cincinnati, O. The officers of this company are J. S. Walker, president; D. H. Moul, vice-president and general manager, and W. L. Cortelyou, secretary and treasurer.

-----≺ CHICAGO >------

E. E. Taenzer of the E. E. Taenzer Lumber Company, Memphis, Tenn., spent several days of last week in Chicago.

The Lumbermen's Association of Chicago is holding a meeting today, November 25, as Hardwood Record comes from the press. The meeting will be in the form of a regular luncheon and business session to be held in the main dining room, first floor of the LaSalle hotel, at 12:30. The meeting is to be addressed by Harry A. Wheeler of Chicago, president of the Chamber of Commerce of the United States.

Frank Purcell, the walnut man of Kansas City, Mo., spent several days of last week in Chicago on business. Mr. Purcell has for years been widely known as one of the most expert handlers of high-grade walnut in the country. In speaking of the foreign market in walnut, Mr. Purcell said there is reason to believe that present prohibitive ocean freight rates will not hold as strongly as at present, and that the now slack

conditions abroad will be real addy anaproved within the course $\phi^{(k)}$ for months

R. E. Pickrel and S. G. Hassall, president and vice president, respectively, of the Pickrel Walnut Company of St. Louis, Me., were preminent Asstros in the local market, bridge several days of last week.

G von Platin and M. J. Lov of the Von Platin Lumber Company, G, and Rapids and Tron Mountain, Mich., were in Chleago several days of last work in business.

W. T. Culver of the Steatus Salt & Lumber Company, Ludington, Mich spent a few days in Cheago receptly

A.L.Dennis of the A. L. Dennis Salt & Lumber Company, Grand Rapids, Mich., was one of the prominent visitors to this market last week.

1° A. Diggins of the Cummer Diggins Company and Murphy & Diggins Cadillac, Mich., spent several days in Chicago recently.

J. V. Stimson of Huntingburg, Ind., and his brother, D. C. Stimson of J. V. Stimson & Co., Owensboro, Ky., spent several days tegether in Chicago recently

John Pearod of the Penrod Walnut & Veneer Company, Kansas City, Mo., returned several days ago from an extensive trip to the Caucasus Mountains, with R. S. Bacon of the R. S. Bacon Veneer Company, Chicago, Mr. Penrod returned to Kansas City via Chicago, where he stopped over for several days.

George W. Hartzell of Dayton, O., was in this city several days of last week

A. Schmidt & H. Heidt, the walnut men of Cincinnati, O., were in this city together for several days recently on business.

The Lumbermen's Club of Chicago held an informal dance at the club rooms, Wednesday evening, November 19. The special feature of the entertainment was the presence of Miss Ruth Stonehouse, who gave instructions in the various new dances which have become such a rage recently.

James C. West president of the Midland Lumber Company, Parkersburg W. Va., was in Chicago on business Wednesday of last week.

William Clancy, president of the Lumbermen's Credit Association. Chicago, has just returned from a trip to New York, where he went with his New York manager, Walter P. MacCabe. Mr. MacCabe succeeds the late Arthur E. Day.

H. T. Below of the Below Lumber Company, Marshfield, Wis., was in Chicago for a couple of days last week.

J. A. Newlin, engineer in timber tests at the government laboratory at Madison, Wis., spent several days in Chicago last week in various box factories collecting data val to be used in connection with investigations of strength and efficiency of packing boxes. Mr. Newlin is a farmer as well as an engineer and went from Chicago to his Indiana farm to spend a short yncation and build a barn.

The Progressive Lumber Company of Chicago is reported to have in

creased its capital stock to \$30,000.

It is reported at Chicago that the Chicago Embossed Moulding Company

——— ≺ NEW YORK >———

has sustained an involuntary petition in bankruptcy.

A decision rendered in Brooklyn recently in the case of the govern ment against the defunct Maley, Thompson & Moffet Company, Cincinnati, was adverse to the lumber company. The government charged under-valuation on a quantity of mahogany lumber brought from Havana in December, 1909. The court decided 1.148 feet subject to forfeiture.

M. S. Cooper, representing the Precious Woods Handling Company, Bayonne and New York City, is on a business trip to Europe. He will visit the principal foreign markets, giving special attention to the veneer and log branches. This company uses a large amount of this class of stock.

B. P. Salmon, manufacturers' agent handling a complete line of mill-work, has taken offices in the new Woolworth building. He represents the M. B. Farrin Lumber Company, Cincinnart; Cream City Sash & Door Company, Milwaukee; the Sells Lumber & Manufacturing Company, Johnson City, Tenn.; the G. A. Clark Company, Sydney, N. Y., and the Crandall Panel Company, Brockton, N. Y.

The Stevens-Eaton Company has made arrangements for and is now ready to ship mixed cars of hardwoods from stock in the yards at Elkins. W. Va. This arrangement follows the trend of the present market which seems to be for immediate needs almost entirely. Mr. Stevens, head of the company, is on a business trip to the West coast.

S. E. Slaymaker, head of S. E. Slaymaker & Co., has purchased a summer home in Pennsylvania. It is known as Honeywood farm and is said to be a model in the state. The property is near Sunbury and includes forty-ave acres. A large house and outbuildings are on the land. Mr. Slaymaker is negotiating for an additional tract of adjoining land consisting of 100 acres.

New York Hoo-Hoo turned out in good numbers November 14 when a concatenation was held at Risenwebers Circle hotel. About forty kittens were on hand and the class of candidates kept the working nine busy. A beefsteak dinner was served after the ceremonies had been performed. A number of prominent out of town Hoo-Hoo were present, including Supreme Serviennotor W. M. Stephenson of St. Louis.

E. M. Vestal of the Vestal Lumber and Manufacturing Company, hardwood operator of Knoxville. Tenn., was a visitor to New York during the fortnight. He made the trip with a party of friends by motor car.

T. H. Wall of the Bufful Hardwood Lumber Company, and Walter Luidlaw of the Toronto oftee of the R. Luidlaw Lumber Company, have lately been spending some time in a hunting trip in Canada.

Charles Perrin of Blakeslee, Perrin & Darling, has returned from the South, where he spent about ten days calling on hardwood milts with which his firm has contracts.

The National Lumber Company finds a very fair demand for flooring in both oak and maple, with some trouble in getting stock on account of a grawing sengity of ears at the mills

G. Ellas & Bro. have been quite busy handling lumber received by lake, mostly white pine and hembook. Three vessels arrived in October and one large carge within the past two weeks.

Miller, Sturm & Miller have lately been getting in a nice stock of quartered oak, for which there is a rair demand, although general hard wood trade is not very active.

 N. Stewart states that there is now relatively more demand for chestnut and poplar than for some time in this market and that plain oak is not quite as active as it was.

T. Sullivan & Co. are getting in a lot of brown ash, which is selling in good shape at present. There is also said to be a very fair demand for maple, and October hardwood trade was satisfactory.

O. E. Yeaver calls the hardwood trade fair this month, although not as active as some time ago. The demand at the yard includes quartered oak to a fair extent, also plain oak and poplar.

The Hugh McLean Lumber Company says there is quite a shortage of oak logs in the Memphis district at present. Trade in quartered and plain oak at the local vari is fair.

Anthony Miller finds bardwood trade rather quiet for November, though he is moving a fair amount of several bardwood stocks. The yard has not been exting in much lumber of late, but has a good sumply

A. J. Chestnat has lately been spending considerable time in New England, looking after mill interests in which he is interested. He reports a fair demand for hardwoods

The barge Pendel!, bound up for lumber, in tow of the steamer Wyoming, broke away from her and is now ashore at Harbor Springs, about fifty miles above Port Huron. It was the intention of the owners, Hamilton H. Salmon & Co., to load her at Munising for the Buffalo yard, but she will not be in shape to take another cargo this year.

H. A. Stewart, who severed his connection with the firm of I, N. Stewart & Bro, some weeks ago, with the intention of locating on the Pacific coast in the lumber business, reports from Portland, Ore., where he will look about for some time before taking up active business.

J. N. Scatcherd has been spending some time lately at the Batavia hard-wood doormill, which his firm controls. Business is good with the mill, but orders are not very far ahead.

----≺ PHILADELPHIA ≻----

J. E. Troth of the J. S. Kent Company says business is no worse than a fortnight ago, and the total of small orders averages up pretty well. He does not look for any important change until spring.

W. A. Jackson of the Jackson-Wyatt Lumber Company, reports a slightly increased activity, but prices are still erratic. No positive betterment is looked for until after the holidays.

W. J. Mingus of Mingus & Rutter says business is spasmodic and hard work is required to sell goods at this time. Prices are not as bad as might be expected.

Among the prominent citizens named by Mayor Blankenburg to represent the city at the Fifth National Conservation Congress, held in Washington, D. C., on November 18, 19 and 20, was the well-known hardwood lumberman, Emil Guenther of the Guenther Lumber Company, who is a great admirer and friend of the mayor.

Fire visited the plant of the Kensington Wood-turning mill, 1939 East York street, on November 13. The damage is estimated at \$10,000.

The Pearson and Ludascher Lumber Company is constantly increasing its already large lumber sheds and mills in preparation for the handling of west coast woods via the Panama canal. It recently filled an order for 500,000 feet of shortleaf pine for shipment to South America. The planing mill of this company is reported one of the most modern of its kind in the country.

The Floyd Lumber Company has engaged Harry Snowden, formerly with the Robert W. Highle Company, New York, as salesman to look after the metropolitan territory.

At the last meeting of the Philadelphia Wholesale Lumber Dealers' Association it was decided that a dinner be held at Kugler's restaurant, on November 21, to which all the salesmen in the employ of the members be invited. This is a new social feature which bids fair to meet with much favor. On this occasion Herbert N. Casson of New York, whose reputation as an interesting speaker on trade matters is well known, addressed the diners on efficient salesmanship.

The famous Sawdust Club of the Union League, composed of lumbermen who are also members of the league, will hold its annual banquet on December 12.

----≺ BOSTON >-----

The directors of the Connecticut Valley Lumber Company, Boston, have voted to pay the normal income tax of one per cent on the first mortgage

 $\sin \phi$ is cent bonds of the emissing due 1933, of which there are 82,115,000 outstanding.

John E. Ray has become general manager of the Annis Grain & Lumber Company of Londonderry, N. H. He succeeds D. P. Perkins, who is a part owner in the business.

The J. R. Bi was Company, Wallingford, has been incorporated, to deal in lumber, with a capital stock of \$5,000. The incorporators are J. R. Brown, George S. Wilcox and C. H. Cheney, all of Wallingford.

The storehouse of the H. C. Wood Company, Westfield, Mass., has been budly damaged by fire, causing considerable loss to building and lumber stored therein.

H. W. Eaton, well-known Maine lumberman, dled at his home in St. Croix, Me., a few days ago. Mr. Eaton was formerly of the firm of Eaton Brothers, but retired from active business about twenty wears ago.

The Readsboro Chair Company has been organized to manufacture and sell chairs and other wooden furniture. The incorporators are William II. Pritchard, North Adams, Mass.; Charles H. Keith, Greenfield, and Charles A. Boyden, Brattleboro, Vt.

The mill of Gilbert M. Bradford at Williamsburg, Mass., has been destroyed by fire

A petition was filed for the dissolution of the C. H. Annable Lumber Company, Springleid, Mass. The petition was signed by the president, C. H. Annable, who states that the company has no liabilities and that the property has been sold and divided among the shareholders. No reorganization is planned.

The Colonial Lumber Company, Boston, has been organized with a capital stock of \$350,000. The incorporators are Grafton D. Cushing, Ira G. Hersey, Walter F. Dixon, J. Randolph Coolidge, 3rd, and John Ruffum

───≺ PITTSBURGH ≻──

H. F. Domhoff, president of the Acorn Lumber Company, is in New Orleans on a business trip. The hardwood business of the Acorn company has been very satisfactory until very recently.

The Johnson-Davies Lumber Company started another hardwood mill in Butler county, Pa., last week. Its plants there are now cutting 25,000 feet a day.

G. M. Chambers, sales manager of the Kendall Lumber Company, spent a few days in Donora, S. C., recently looking over the operation which the Kendalls recently took over from the old Thornwood Lumber Company.

J. N. Woolett, president of the Aberdeen Lumber Company, finds some

Walnut for Export

Thirty years' experience in the handling of walnut logs for export enables me to furnish guaranteed prime quality stock.

I am constantly in close personal touch with the source of supply of export walnut logs and know exactly what I am getting at all times. In fact, a number of the best foreign houses are taking up my logs on my own recommendation.

My supply enables me to fill orders of any size in carload lots without delay.

Highly Figured Walnut

As a result of close personal supervision of log purchases my stock of highly figured walnut in long wood and stumps contains only the choicest in figure and curl that can be found.

All this stock is carefully selected to take care of a discriminating demand.

My figured stumps are all dressed closely and when shipped are practically in shape for the knife.

Youwill lose nothing by trying me on your next inquiry.

FRANK PURCELL Kansas City, Mo., U.S. A. slowing down in the gum and cottonwood business. Manufacturers are not inclined to figure on next year's lumber, he says.

E. H. Shreiner, president of the E. H. Shreiner Lumber Company, made quite a long trip among Canadian manufacturers this month. He finds money there unusually tight and lumber buying slow in consequence.

The Pittsburgh Lumbermen's Club will give a vaudeville and moving picture entertainment at the German Club House on Craft avenue, the evening of December 3, at which all the wives of the members are expected to be present.

The Thorny Creek Lumber Company of this city has completed its organization with a capital of \$325,000 to operate in Pocahontas county, W. Va. The members are D. C. Willis, S. A. McMullen, G. W. Eisenbeis, S. Bailty, Jr., H. M. Landis, all of Pittsburgh.

The Nusbaum Chemical Company of Bradford, Pa., has taken over all the timberland of the Quintuple Oil Company amounting to about 3,700 acres. This will give it enough timber for its operations for eight years.

J. E. Ast of the Mutual Lumber Company reports no let-up in buying of good hardwood. He finds manufacturing trade fair and predicts a good vear in 1914.

The West Penn Lumber Company had in October by far the best month in its history. It has a splendid line of trade with the big corporations and industrial concents of Pittsburgh.

I. F. Balsley of the Balsley & McCracken Company spent a few days in the eastern market lately. Orders are coming mighty slow but after all the trade is not half bad with this concern.

E. V. Babcock of the Babcock Lumber Company is being warmly congratulated on all sides for the aggressive part he took in the recent election of Joseph G. Armstrong as mayor of Pittsburgh. Mr. Babcock is chairman of the Business Men's Committee of 100 which clinched Mr. Armstrong's election.

=< BALTIMORE >=

George Heintz, who was arrested several weeks ago on charges of having set fire to a number of lumber yards and woodworking establishments in South Baltimore, pleaded guilty when arraigned in court, and was held for an examination as to his sanity. Within the period of a few months last spring and summer, Heintz, it is alleged, started a number of fires, one place being set ablaze not less than four or five times.

While the Baltimore Lumber Exchange did not make an exhibit of lumber and other wood products at the exposition arranged in connection with the Maryland Week at the Flifth Regiment Armory last week, the State Forestry Bureau has made an interesting and instructive display of the timber resources of the State, showing cross sections and veneers of the different woods to be found in the State, and giving much other valuable information.

The property of the Walbrook Mill and Supply Company, at Clifton and Braddish avenues, in the northwestern section of the city, has been purchased by the Independent Casket Company, heretofore located on Calvert street, and will be occupied shortly by the purchaser. The affairs of the Walbrook Company have been in process of readjustment within the

Railroad men to the number of 125 were in Baltimore last week to attend the eighth semi-annual meeting of the Railway Development Association, an organization formed to discuss and promote the development of the territory through which the railroads represented by the members run. The Association represents about 200,000 miles of road, and is doing much in the way of co-operation to attract settlers for vacant farm lands, and to encourage the development of natural resources. A number of the members made addresses on topics connected with the work of the organization

—≺ COLUMBUS ≻=

The report of the city building inspector for the month of October shows that there were 271 permits issued for the month, having a valuation of \$550,005 as compared with 264 permits and a valuation of \$341,983 in October, 1912. For the first ten months of the year 1913 the number of permits issued was 3,687, with a valuation of \$4,667,088, as compared with 2,369 permits having a valuation of \$4,269,843 for the first ten months of the year 1912.

The Lowellville Lumber Company of Lowellville, O., has been incorporated with a capital stock of \$15.000 to deal in all kinds of lumber. The porators are O. L. Jacobs, M. A. McLure, B. M. Campbell, H. H. Jacobs, Orrin Jacobs and Edward Jacobs.

The Bucyrus Lumber Company, just incorporated, of Bucyrus, O., with a capital of \$100.000, will take over the business of the White Lumber Company, Coutler & Co. and the Volirath Mill. Seventy-five men will be employed and yards will be maintained as the distributing yards of the company.

The H. R. Allen Company has employed S. M. Marks, formerly with the Nicola, Stone & Myers Company of Cleveland, to travel southwestern Ohio.

There is a big building boom in the cities and towns along the Ohio river in the southeastern part of the state. This is especially true at Yorkville and Tiltonsville, north of Martins Ferry, O. Included in the building boom are a number of large manufacturing plants.

It is reported on good authority that Cole & Crane of Cincinnati, extensive lumber dealers, have purchased the lumber mill of the Ivory &

Huntington Lumber Company, located on Pizeon Creek, W. Va., and will move the plant to Mason County, Ky,

R. W. Horton of the W. M. Ritter Lumber Company says there is pretty good demand for hardwoods both from tactories and yards. Facare the lest buy is at this time. Concerns making furniture Implements and vehicles are in the market for small orders. Prices are pretty wed maintained and no cutting of any consequence is reported The car shortage is interfering with shipments to a certain extent.

J. R. Gobey of John R. Gobey & Co. says the hardwood trade is holding up well and prices are as good as could be expected.

J. A. Ferd of the Imperial Lumber Company says there is a good Jemand for hardwoods at this time. The recent storm cut off the supply to a eestam degree

A. C. Davis of the A. C. Davis Lumber Company says there is a good market for all varieties and grades of hardwoods with prices holding up

The Toledo Bending Company reports that business has been dull for some time past. The call for wagon rims has fallen off and the trade in automobile rims has not improved sufficiently to offset the slow wagon wheel demand. It is believed that conditions will be greatly improved when automobile wheels have been standardized, a condition to which this concern is looking forward at an early date.

The Toledo Carriage Woodworking Company reports business a trifle off just at present, but declares that spring prospects are looking fine.

President L. E. Gottshall of the Gottshall Manufacturing Company

has just returned from a trip to Chicago where he went to purchase equipment for the new band mill to be erected by the concern in Fulton county. The Gottshall Manufacturing Company recently purchased several hundred acres of virgin hardwood forest, a commodity hard to find in the state of Ohio at this date.

We are holding our own," was the statement issued by the Skinner Bending Company, "Wagon rims are a little slow but the big demand for buggy wheels has more than made up for the short demand in wagon We are selling about all the goods we can turn out and there business. is no indication of a slump" This concern operates in territory covering a radius of 500 miles of Toledo.

Aaron L. Kelsey, one of the old-time lumber dealers of Toledo, doing business when Toledo was but a struggling village and the surrounding country covered with a rich growth of the finest kind of hardwood lumber, died at his Summit street home here recently. He was aged ninety-one years. He came to Toledo in 1850 and was at first interested in lake pavigation. He formed a partnership with Nathan Reeve in 1856 and for thirty years conducted a lumber business here, leaving his son, II. Reeve Kelsey, to carry it on after his retirement. The firm is now one of the most important lumber concerns in this section and is known as Kelsey & Freeman. Mr. Kelsev was instrumental in bringing the Milburn Wagon Works to Toledo.

W. T. Hubbard, a prominent Toledo hardwood man, reports business a little dull just at present, with oak holding firm both in demand and price. Mr. Hubbard has a full line of hardwood stocks and is prepared to take care of all orders with which his concern is favored.

The Auglaize Furniture Company has been organized at New Bremen, O., with a capital stock of \$60,000. The incorporators are Julius Boesel, F. W. Bruns, Henry Dierker, F. W. Crober and Louis Huenke, This concern replaces the Klanke Furniture Company whose plant was destroyed by fire, the concern locating at Piqua, O.

The Geo. B. Bice Company of Wapakoneta, O., has been incorporated for The incorporators are : L. M. Bice, C. E. Bice, L. A. Bice, G. G. Bice and Geo. W. Ozias of Dayton.

=< INDIANAPOLIS ≻=

The Mitchell Hardwood Lumber Company, Mitchell, Ind., has increased its capitalization \$10,000.

About \$500 loss by fire was caused a few days ago in the drying house of the Indianapolis Sawed Veneer Company.

The finished veneer warehouse of the Roberts & Conner Company at New Albany was damaged about \$3,500 by fire recently, which originated in an adjacent flour mill.

Incubators and refrigerators will be manufactured by the newly organ-Ized People's Manufacturing Company at Greenfield, which has been incorporated with \$25,000 capital stock. Those interested are J. A. Johnson,

W. W. McCole and Homer Smith. The city council has passed a new building code in which it is required that all interior trim, doors, window sashes, etc., shall be of metal in fireproof buildings and all structures more than ninety feet high must be fireproof.

With an authorized capitalization of \$100,000, the Goshen Sash and Door Company has been organized and incorporated at Goshen. The principal stockholders are Henry R. Whitmer, Mary L. Whitmer and J. M. Farrell.

Some interesting data in regard to the local hardwood industry has been compiled as follows: The National Vencer and Lumber Company has an output of 4,000,000 feet of quartered oak veener annually; the Interior Hardwood Company uses 2,000,000 feet of hardwood lumber annually in the manufacture of flooring; the Central Veneer Company manufactures 6,000,000 feet of oak and mahogany veneers a year; the Indianapolis Sawed Veneer Company turns out 4,000,000 feet of oak and mahogany

=< NASHVILLE >=

The Nashville Manufacturers' Association has opened a permanent Nashville made products in a five-story building on Third avenue in the central part of the city. The Nashville Lumbermen's Club has an attractive exhibit of hardwoods and products, giving a very comprehensive idea of the industry in this section. There are about 400 manufacturers in the city, with about 100 represented in the manufacturers' building.

The Coosawater Lumber Company is the name of a strong lumber company that has been organized at Cookeville, Tenn., with authorized capital stock of \$25,000. The company has been incorporated by J. C. McDearman, J. A. Lambert, John J. Gore, D. H. Morgan and S. A. Morgan, and will do a general business of buying, selling and sawing lumber.

The Greeneville Chair Company, which has been manufacturing 1,000 chairs daily, and recently operated by a receiver, has closed down. thought that the company has been sold under the receivership and reor-It employs about 400 men. ganized.

The Milne Chair Company has recently installed a plant at Chattanooga at a cost of about \$200,000. The company was formerly located at Cleveland. Tenn., and had a disastrous fire, after which it was decided to remove to Chattanooga.

About fifteen members of the Nashville Lumbermen's Club, and also members of the Louisville Hardwood Club went to Memphis November 14, and were royally entertained for the day by the members of the club there. The southern clubs have been having a series of social meetings the past year, which have accomplished much in bringing about more cordial business relations.

George N. Welch of Monterey has recently moved with his family to a handsome suburban home purchased near this city. Mr. Welch is head of the Monterey Barrel & Heading Company, a wealthy concern, and has large lumber and timber interests.

John B. Ransom, Jr., and Thomas R. LeSueur of John B. Ransom & Co. have gone to Lee county, Arkansas, where they will spend a week or two duck hunting

Forest fires were recently discovered on the Tennessee-Kentucky line, and were extinguished by T. G. Ford, Warden of Bell county, Kentucky, with the aid of a volunteer crew. The Kentucky Forestry Department has been active in efforts to prevent forest fires, and claims that the slopes of Tennessee and Virginia are a constant menace to forests of Kentucky.

The City Board of Commissioners of Nashville has made a request of the officials of the Louisville & Nashville Railroad and Nashville, Chattanooga & St. Louis Railway to appear and show cause why they should not grant more satisfactory switching privileges in local terminals to the Tennessee Central Railroad. The Tennessee Central entered Nashville eight or ten years ago, and the old lines have charged such high switching rates as to make joint business almost prohibitive. The action of the commissioners will be watched with interest by lumber shippers as well as all others. The case is set for hearing November 25.

----< MEMPHIS **>**--

Stiritts Brothers of Illinois have purchased seven hundred acres of timberland in Poinsett county, Arkansas, and will install a mill for the development of the timber thereon. As soon as the land has been cleared it will be sold for agricultural purposes.

The Lumbermen's Club of Columbus. Miss., has perfected organization, with the following officers: D. F. McCullough, president of the Columbus Lumber Company, president; Thomas Robertson and G. M. Flynn, vice-presidents; C. H. Hale, secretary. A committee of three has been appointed to arrange for quarters for the new organization.

J. T. Willingham, president of the Tennessee Manufacturers' Association, and C. C. Gilbert, secretary of that organization, will attend the big meeting of the manufacturers of the Mississippi valley to be held in Chicago December 3 under the auspices of the Illinois Manufacturers' Association. Mr. Willingham, who is president of the Memphis Coffin Company, is one of the most prominent manufacturers in this part of the South. There are a number of prominent lumber firms identified with the Tennessee Manufacturers' Association, including the Anderson-Tully Company and other prominent woodworking concerns. The Tennessee Manufacturers' Association is seriously considering the appointment of a secretary to look exclusively after export trades in view of the early opening of the Panama canal. His duties would be largely with the Latin countries of South America with which some business in lumber and lumber products has already been worked up. It is believed that this would greatly increase this business and that it would be a good thing for manufacturers of hardwood lumber and lumber products, and lumber interests are pleased with this prospect.

The Helena and Southwestern Railroad Company has taken out a charter under the laws of Arkansas for the purpose of building a railroad from West Helena to the timberland holdings of the Chicago Mill and Lumber Company. The latter firm is back of the railroad, which is capitalized at \$100,000. The Chicago Mill and Lumber Company is completing a big hardwood mill, veneer plant and box factory at West Helena and the read is planned primarily to ind in the development of the timber to be used in this plant

J. H. Townsend, general manager of the Southern Hardwood Frank-Rureau, has returned from Chrego where he went to appear before the Interstate Commerce consumerson in the case of the Anderson Tulke Company against the Vicksburg. Statespart and Pacific Railread involving a rate of twenty cents per handred on box material from Vicksburg to Port Arthur, Tex. The bureau filed a petition with the commission asking that the rate be made fifteen cents instead of twenty cents. If the bureau is successful in securing a lower rate from Vicksburg to points in Texas efforts will be made by that body to secure rates from Memphis to all destinations in the Lone Star state. Harry Anderson, attorney of record, and W. B. Morgan, secretary-trensurer of the Anderson-Tulky company, accompanied W. Townshend to Chicago.

The rallroads west of the Mississippi river have announced an advance of from one to five cents per hundred pounds on shipments of hardwood lumber from points in the Memphis territory to Canadian destinations, effective January 1. The Southern Hardwood Traffic Bureau has already protested against the proposed advances and it is expected that the comission will suspend the higher tariffs until a hearing has been held. The rallroads both east and west of the Mississippi river in September, 1912, filed higher tariffs covering the same destinations but the bureau was successful in defeating the higher rates. The present advance differs from that proposed in the previous instance in the respect that this was attempted only by the roads west of the river. The eastern lines have not given any intimation as to their course.

Price & Norris are constructing a mill at Yazoo City, Miss., for the purpose of manufacturing shuttle blocks for export. The plant will be in readiness for operation within the next few weeks. Dogwood and persimmon are largely used for the manufacture of these blocks and the owners of the mill have secured the timber rights on about 10,000 acres of land. Mr. Price has been operating a mill at Hattiesburg but has decided on Yazoo City on account of the better timber supply. Practically all of the output is exported and it will amount to from 2,000,000 to 2,500,000 blocks annually.

The Hines Lumber Company has purchased the shingle mill of Mingle & Hearn at Trezevant, Tenn., and has leased this to Goodwin & Scott, who will operate it in future. A considerable quantity of cypress tim ber was included in the transfer and the lessees will develop it.

A plant for the manufacture of barrel hoops will be established at Greenwood, Miss. It is to be owned by Messrs. Myers and Swauk. They have selected this location on account of the abundance of elm timber in that territory. The average capacity will be about two carloads a week.

The F. T. Dooley Lumber Company has completed the installation of yards on the same ground formerly used by the Dooley-Stern Lumber Company and has creeted an office building and other accessories. The firm will remove to the new office shortly. The F. T. Dooley Lumber Company is engaged in handling lumber at wholesale.

=≺ ST. LOUIS >=

W. W. Dings of the Garetson-Greason Lumber Company is out on the Pacific Coast on a recreation trip. He will be gone for two or three weeks

C. L. A. Beckers withdrew from the Beckers-Schnelle Lumber Company on November 1 and the Schnelle Lumber Company has succeeded to the business at the old stand.

E. W. Blumer, sales manager of the Lothman Cypress Company, is up in Michigan on a business trip for the company's Oshkosh sash and door factory.

F. C. Harrington of the Thos. E. Powe Lumber Company has returned from a business trip in the East. He says he found trade conditions fairly satisfactory and believes business will be quite active in that section before a great while.

R. A. Hooton, president of the Hooton Hardwood Lumber Company, is at the St. Louis office of the company and will remain here until the first of the year. He came up from New Orleans where he has been considering a 12,000 acre hardwood lumber deal. R. U. Fletcher, the local

manager, is down in Texas on a business trip.

President F. H. Smith of the Lumbermen's Exchange has named as

President F. H. Smith of the Lumbermen's Exchange has named as delegates to the National Conservation Congress the following members of the Exchange: Charles E. Thomas, Thomas & Proetz Lumber Company: William Lothman of the Lothman Cypress Company, and George E. W. Luehrmann of the Chas. F. Luehrmann Hardwood Lumber Company.

The following gentlemen are the delegates named by President Smith to represent the Exchange at the National Rivers & Harbors Congress: Thos. E. Powe, Thos. E. Powe Lumber Company; J. L. Scheve, Krebs-Scheve Lumber Company; F. J. Liebke, C. F. Liebke Hardwood Mill & Lumber Company, and J. R. Massengale.

R. F. Krebs was made chairman together with T. E. Powe and A. W. Johanning to represent the Exchange as the committee to make recommendations to the Board of Freeholders that is to draft a new city charter.

The following resolution was passed at a meeting of the Exchange held November 15:

WHEREAS, The interests of the shippers and receivers of lumber and ties of this state would be very much furthered by the establishment of an office of the Public Service Commission of Missouri in St. Louis, in

Kraetzer-cure

¶ Kraetzer-Cured lumber is susceptible of being thoroughly air dried or kiln dried in less than one-half the time ordinarily required for seasoning unsteamed wood.

¶ Kraetzer-Cured lumber does not caseharden, check, end-split or stain, and dries without warping or buckling.

■ Kraetzer-Cured lumber has a uniform. tone of color. Its working qualities are greatly improved, and the beauty of the flake on quarter-sawed stock is enhanced.

■ Kraetzer-Cured lumber dries out to materially less weight than unsteamed wood, ranging from 200 to 500 pounds per thousand feet.

¶ Kraetzer-Cured lumber will neither shrink nor swell, and the grain will not raise when water stains are employed in finishing.

¶ Kraetzer-Cured lumber is not impaired in strength or quality by the process.

¶ Kraetzer-Cured lumber eliminates all glue-joint troubles and "will stay where it is put."

A list of manufacturers of Kraetzer-Cured lumber will be supplied on application.

Kraetzer-Cured Lumber is produced by the use of the Kraetzer Preparator, manufactured by

The Missouri Intra tate Rub Committee of the Exchange held a meet ing Wednesday afternoon, November 12, in the rooms of the Exchange, This committee is composed of two yard dealers, two tie firms and two manufacturers out in the State, all of whom are members of the Exchange, W. F. Woerner, Public Service Commissioner of Missouri, attended the meeting as an invited guest. There was a general discussion in regard to the troubles of the lumbermen of Missouri in securing the full value of the new rates, which the United States Supreme Court in a recent decision upheld as valid. These were laid before Mr. Woerner, who told the committee that there was a careful investigation being made and that the attorney for the Commission was familiarizing himself with all the facts and would secure a more thorough compliance with the law from the railroads. Specific information of law violations will be furnished the Commission by the Exchange.

==∹ LOUISVILLE >=

The trip of the Louisville Hardwood Club to Memphis, November 14. provided an unusually enjoyable occasion, the Memphis Lumbermen's Club entertaining the Nashville and Louisville lumbermen with marked hospitality. Memphis was even more of a lumber town that day than usual, on account of the visiting clubmen being there, while a red gum meeting and a cooperage convention likewise brought to town a lot of people interested in forest products.

It is probable that the Louisville Hardwood Club will celebrate a "ladies' night" in the near future. On previous occasions when ladies have been at club meetings the enjoyment has been sufficiently keen to

justify a repetition of the event.

Hughes Moore, heretofore engaged in the wholesaling of yellow pine and other woods used for building purposes, has joined the sales department of the W. P. Brown & Sons Lumber Company. This concern is now making some yellow pine at its Fayette, Ala., mill., so that the acquisition of Mr. Moore is regarded as a wise stroke.

W. H. Vanderbilt, formerly with R. J. Darnell, Inc., of Memphis, and the Grand Rapids Veneer Works, has become assistant superintendent of the

Louisville Veneer Mills.

A good demand for dimension stock is reported by the C. C. Mengel & Bro. Company, whose business in this direction is handled by Emmet Ford. The dimension mill is being run up to capacity right along.

The Ohio river rose sufficiently last week to make some of the lumbermen on the Point wonder whether they were in for another flood, but cold weather stopped the rise before it was anywhere near the danger line. The engineers of the city are trying to figure out a practicable plan for filling in the Point so as to eliminate flood danger, and the lumbermen in that section are hopeful that their efforts will amount to something.

K. W. Hobart and W. E. Chamberlain, with Hobart & Co. and John M. Woods & Co., respectively, were Boston lumbermen in the Louisville

market recently.

Prospects with interior finish manufacturers are good, most of the hardwood men report. This seems to indicate that 1914 will make up for the poor business done in this line during the current year.

-----≺ ARKANSAS **>**-

The Kansas City Hardwood Flooring Company, which erected a large plant in the Little Rock factory district during the summer months, is now operating under full sway. The plant was completed and began operations in September of this year, but not until recently has it been able to run with a full force. They are now turning out about 35,000 feet of finished products daily.

Mr. Phillip Slimmer of the Slimmer Manufacturing Company of Chicago is at present in Little Rock to superintend the construction of the new factory buildings which that concern is building in Little Rock's Factoria Addition. This plant will be pushed with the greatest possible speed to completion, when it will be used for the manufacture of bookcases, china cabinets and like commodities.

On November 11 the Little Rock Handle Factory filed a certificate of surrender of charter with the Secretary of State of Arkansas.

The Chess & Wymond Stave Company of Mountain View, Ark., has recently installed two big stave mills in the country southeast of that The company is employing a large crew at each of these plants. and will work there throughout the winter.

According to report received in Little Rock on November 15, Federal Judge Sanborn, sitting at St. Paul, Minn., on Friday, November 14. refused to issue a temporary restraining order against the Railroad Commissioners of Arkansas, to prevent them from enforcing the flat rate on rough material. Mr. W. W. Wilson, President of the Arkansas Stave Manufacturers' Association, was advised of this ruling by telegram.

Stirritts Brothers have recently purchased a 700-acre tract of hardwood timber in the northwest portion of Poinsett county, and will erect a large sawmill as soon as the machinery can be shipped in. They pro pose to open up the land for agricultural purposes as fast as the timber is removed.

Captain W. I. Black of More, Ark on November 14, loaded and shipned what is regarded as probably the most valuable carboad of brokery timber that has been shipped out of Arkansas this season, Captain Black specializes in high-grade straight grain material which is especially valuable for golf sticks poles and shafts. He also makes a specialty of blikery carefully selected for use as spokes in racing automobiles

Batesville, Ark., is suffering from a temporary wood famine. The Mount Olive Stave Company, which is the largest dealer is wood and fuel at that place, has announced that its supply is completely exhausted at present, and it will not be able to get a further supply for some time. Most of the teams and wagons in the community are being used at present to hall the cotton products into market.

=< WISCONSIN ≻=

The C. F. Kade Manufacturing Company at Plymouth has been placed in operation. The new company has begun the manufacture of office furniture and fixtures in a modern woodworking plant, which was built a few years ago and for some time occupied by the defunct Plymouth Veneer Company.

The White Wagon Works Company, Sheboygan Falls, is contemplating the erection of a three-story warchouse, 50x100 feet, just south of its present factory building at Walnut street and Broadway, this fall.

At the recent annual meeting of the stockholders of the Phoenix Chair Company, Sheboygan, the following were elected directors: Francis Williams, president; A. C. Hahn, secretary and treasurer; Mrs. Bridget Blackstock and W. H. Churchill of Milwaukee. Mr. Williams succeeds the late T. E. Blackstock as president.

A new sawmill will be evected at Malvern, a little Wisconsin village south of Rhinelander on the Northwestern line, by the Wausau Lund Company. The plant will be modern in every respect and will employ a large number of men. It is said that the concern has sufficient standing timber in that locality to maintain the operation of the mill for ten years. Heavy logging operations will be carried on during the coming winter. The advent of the new industry has been a boom for the little village and a large number of residences will be erected for families of the employees.

The American Floor Surfacer Company, a Green Bay corporation, has filed an amendment to its articles of incorporation changing its name to

the Northern Floor Surfacer Company.

The Red Birch Lumber Company of Catawba has been taken over by the Beyer-Morner Lumber Company of Prentice. The new owners have taken possession of the affairs and properties of the Catawba concern.

The Advance Car Mover Company, located at the foot of John street in Appleton, has purchased the material and equipment of the Wagner Car Mover Handle Company of Anawa, which will be removed to Appleton and installed in the Advance company's plant. The equipment consists of gauge lathes and planers, and the material comprises 8,000 unfinished handles. Richard Miller, owner of the Advance company, has closed a deal for 10,000 feet of hard maple which will be used in the manufacture of car mover handles and handles for cant hooks and similar tools. The concern formerly purchased its finished handles from the Wagner company.

The Thompson-Spier Lumber Company of Menominee, which recently made heavy purchases of timber along the Milwaukee road in the Ontonagon district, is installing camps and planning for a big cut this winter. The company expects to cut about 10,000,000 feet which will be shipped to Menominee by rail for sawing.

The Flambeau River Lumber Company, Ladysmith, has finished its season's cut and is now closed down until spring. The employees will not be jdle, however, as there is sufficient work about the yards and in the logging camps of this concern.

The Bekkedal Lumber Company, which has a government contract to cut timber from the Couderay Indian reservation, has finished its season's cut at the new mill at Eddy creek. The mill will be overhauled and sawlag resumed about the middle of January. The company still has eight years to run.

The John H. Kaiser Lumber Company, Eau Claire, has finished its cut and will cease operations for about six weeks to make repairs. The mill has been running continuously for the past eleven months during which 22,000,000 feet of lumber were cut and \$150,000 paid out in wages.

T. A. & L. P. Johnson. Merrill lumber contractors, have secured a large logging contract from the Mortenson Lumber Company of Wausau. They have started operations at Schultz's Spur where they will cut 2,000,000 feet. The contractors report little difficulty in securing sufficient men, despite reports of many loggers that were short handed.

J. W. Hannegan of Glenwood City will operate a lumber camp near Hannibal, in Chippewa county, this winter. The outfit has been shipped

to the scene of operation and work is in progress.

Fire did considerable damage at the plant of the Wisconsin Chair Company, at Port Washington, November 17. The damage to the stock, machinery and building will reach \$10,000, which is fully covered by insurance. Defective electric wiring is given as the cause of the blaze.

The G. W. Jones Lumber Company. Appleton, is preparing to put in a normal supply this winter and has a big camp in operation. According to G. W. Jones, though the demand for lumber is not very heavy at present the lumber industry in the woods will not be slack this season. The Jones company has a new 240-acre timber site in Forest county from which it expects to make a large cut.

Timber Land Factors

Chicago, Ill., 1750 McCormick Building Portland, Ore., 1107 Spalding Building Seattle, Wash., 1009 White Building The Menasha Wooden Ware Company following its custom of several years, will do no logging of its own this winter but will low logs at points on the Sociline. It will stock up sufficiently to keep the plant in operation throughout the cere

The J. S. Sterns Lumber Company of Washburn will operate four logging camps this winter to keep the big sawmill in that city running a full day shift throughout the year and probably for part of a night run. One camp will be at Squaw Bay in Baytield county another on Oak Island on the Apoeth group and two in northern Wichigan.

The Plambeau River Lumber Company will operate three camps of its own, one north of Little Falls, another near Big Falls and a third at the conflaence of the Elk and Flambeau rivers in Price county. This concern will also any logs either on the railreads or the Flambeau.

Adam Dobry of Green Bay, a pioneer lumberman of Brown county, died after an illness of two years, aged sixty-nine years. He came into the lumbering district at the age of sixteen years and soon after established a sawniil. He tuilt up a large business and retired eight years ago. His widow and six children survive him.

David H. Ferguson, pioneer lumberman of the Chippewa Valley, died at St. Joseph's hospital in St. Paul recently. He was one of the founders of the Paulel Shaw Lumber Company. His wife and one daughter survive.

Frank E. Wilson, a logger of Antigo, has filed a voluntary petition in bankruptcy in the United States District court at Milwaukee. He claims Habilities in amount of 86,340.36 with assets of only 8170. Of the assets he claims an exemption of \$130.

Edward Hines, head of the Hines lumber interests, of Chicago, was a recent visitor at Eau Claire. Mr. Hines was a guest at the meeting of the Lumbermen's Association at the Eau Claire club and discussed freight rates and the contemplated increase, giving some valuable information.

Grant T. Stephenson Constructing Engineer

Wood Distillation Plants for Utilization of Wood Waste

WELLS. MICHIGAN

It is said that Mr. Hines transacted business matters with O. H. Ingram and also investigated the method of cutting and drying lumber at the Kalser Lumber Company plant.

The government sawnill at Neopit was compelled to shut down for a short time owing to the fact that the lure of the deer trails was so powerful an attraction for the members of the crew employed. With the opening of the deer hunting season absentees from their places became so numerous that the operation of the mill was seriously interfered with and it was decided to suspend work for a short time. Necessary repeirs were made to the mill during this time.

The Milwaukee read has made application to the railroad commission of Wisconsin for a certificate of public convenience and necessity to build a branch line from Merrill north about thirty miles into the lumbering district. The Soo line and the Northern Pacific road are working on surveys for extensions into the northern Wisconsin territory.

Wm. Smiley & Son, Minneapolis, Minn., who recently purchased the machine shop and foundry formerly owned by the F. C. & C. A. Stanley Company at Eau Claire, have resumed operations. The concern is making casting and doing other foundry work for lumbering and other concerns in that section and expects to add a line of tractors and other machinery in the spring

The $\hat{\Lambda}$ E. White Machine Works have produced the first of the new swage shapers, which were an original invention of Mr. White and have been improved upon during the past few years. The concern is located at Eau Claire and manufactures saw swages and swage shapers which find a ready market in all the saw mills and some factories in that city, as well as in all sections of this country and Canada.

The committee of business and laboring men of Grandon has taken an active interest in the affairs of the Wisconsin Fruit Package Company of that city which is in bad financial ways. The local claims against the concern aggregate about \$20,000; outside accounts amount to about \$3,000, and there is a mortrage indeletedness of \$12,400. The assets are placed at \$35,000. Local creditors have signified their willingness to take stock for their claims and outsiders have been asked to do the same. This would permit the plant to be operated and pay off its claims, as local capital could be interested to run the plant and a new organization be perfected under new management. To declare itself bankrupt would result in paying off very little of the concerns debt from the sale of the assets. S. A. Gifford, vice president of the First Naffonal Bank of Crandon, heads the Citizen's Committee.

The Hardwood Market

=< CHICAGO ≻=

Conservative buying continues to mark the condition of local lumber affairs. It is not true that there has been any especially unfavorable change during the last two weeks in the condition of the lumber business in Chicago, and there is no indication that there will be any marked change in the near future either for the better or worse. The condition here is more or less typical of conditions in other hardwood consuming sections, and is chiefly characterized by the number of small orders which are being picked up by dint of close application to business.

Yellow pine, of course, is way off and the effect of this slump has been seriously felt by handlers of hemlock. It has not as yet had any special effect upon hardwood, although of course this condition with any particular type of lumber is apt to have some effect upon lumber in general, although the present rather unsatisfactory condition in the local market is due to other causes.

The same relative position of the various standard hardwoods continues as heretofore, with oak as usual heading the list both as to sales and, generally speaking, as to prices, although it is a fact that oak lumber is not up to the real market value.

There seems to be a slight improvement in sap gum and in the lower grades of red gum, but the better stock in red gum is still considerably off. There is some little strengthening in the tone of this wood, however, since the formation of the Red Gum Lumber Manufacturers Association, and since the publication of the information brought out at the red gum meetings.

Local furniture factories are not any too optimistic, although they are reported to be doing a good business. The box trade locally is in good shape, and calls for a lot of lumber.

The interior finish people are now running along in a fair way, but are not doing the business that they desire. The proximity of the semi-annual inventory season is having its effect locally as well as in other markets.

=≺ NEW YORK **>**=

The New York hardwood market shows no changes in prices on lumber but some oak flooring items are advanced. Clear maple flooring is off \$1.00. The demand for lumber is better at this writing but no rush of orders is looked for until after the first of January. Buying is still confined to actual needs and with the approaching inventory season the yards are not expected to lay in any large stocks. The present demand would indicate more activity in consuming channels. Oak, ash, birch and

maple are best in demand. Chestiant and gain are weak. The gain anacket is still unsettled with 2000 via ance in aportations. There seems to be no controlling factor in the gain situation, local conditions at new pends varying so that quotetions show a ridiculously wide range.

≺ BUFFALO ≻=

The hardwood market has not been active during the past two weeks, but there is about as much lumber selling now as at that time. It is mostly mixed-car bushness and covers a good many woods. There has been no car scarcity here to speak of, so that shipments could be made with satisfactory promptness. Prices are holding about steady, although they are not as high as they were earlier in the year. Some lumber is being bought in Canada since the taking off of the duty and prices are at present not quite so high there as in some competitive sections in this country.

The demand has been improving in chestnut and poplar, according to some dealers, and they report that the plain oak demand is not so strong as it has been. Quartered oak is looking up some and the better grades are now in quite fair demand for the senson. Maple and birch are doing about as well as for some time. Poplar in the lower grades is selling pretty well, ithough the supply here is small.

====≺ PHILADELPHIA ≻=

Judging from the various reports throughout the trade, the business situation continues without salient feature as to an advance or serious retrogression. Although buying is apathetic all along the line a good many small orders are booked, which in the aggregate make a fair average. The volume of trading, however, is far below anticipation for this time of the year. Lumbermen apparently accept conditions as the legitimate result of the new administration and its policies and preserve a wise tranquillity. Furniture factories continue busy and box makers are running full time, but buying continues on a hand-to-mouth basis. Builders find money a little easler and are rushing work during the favorable weather. Vard men report fair suburban trade, but have ample stock to supply immediate wants. From reports on stock pile at the mills it is evident there will be no unusual accumulation, in consequence of which prices will be well sustained.

Among the various woods the relative positions of a fortnight ago are well maintained. Oak, although easing off a little, heads the list; quartered oak remains firm; poplar holds its old position; basswood is in good call; chestnut is not as strong as in last report; ash, birch and maple are steady, and gam is making new friends. The low grade of all hardwoods is moving freely.

────≺ PITTSBURGH ≻──

There is a pretty confident tone to the lumber market here. The steel business is slowing down. Operations are going on at from sixty to eighty per cent capacity, with gradual reductions every week. Nobody looks for much improvement in this line before February 1. With steel concerns and also with other big industrial corporations it is regarded as a readjustment period and pending a better insight into next year's business lumber buying will be comparatively quiet. There is a nice line of business going around, although it is spotty. Also, there are some very good inquiries out for next year on contract bills. Hardwood buying, while conservative, has kept up mighty well and prices except in a very few lines are firm at existing quotations.

----≺ BOSTON ≻=

There has been a moderate volume of new business reported in the hardwood market during the past two or three weeks. Most of the buyers in this section are not willing to anticipate their wants. There is beginning to be a feeling that general business will not be good for several months, which may be one reason why buyers of hardwood lumber are not ready to replenish their stocks in more than the moderate way they are now doing. So far as prices are concerned we can find no evidence of sellers trying to sell larger lots by the reduction of values. Practically all the manufacturers of hardwood lumber are as firm in their ideas of values as they have been during the past few months. Offerings of desirable lumber do not appear to be any larger and until the mills show some anxiety to make sales it is doubtful if prices will be any lower. A shortage of cars is making itself felt in some quarters but trou'le from this is not serious at the present time. The call for quartered and plain oak continues of fair volume. Prices are steady at least. Brown ash has had a fair demand and offerings are not large. Veneers are in moderate demand at firm prices.

-----≺ BALTIMORE >-

The hardwood trade is in the main rather uneventful. Dealers as well as millimen had expected decided activity by this time, but buyers show more or less conservatism. Stocks in the yards indicate that the movement has not been of extraordinary proportions and some pressure is felt with regard to prices. Values appear to have eased off instead of going up, and the current month is not quite up to the preceding one in point of activity. Chestnut in particular appears to have felt the slowing up and the quotations have sagged until they are about back where they were before the rise during the year. Oak is also somewhat lower, but has not been affected to such an extent as chestnut. At least, the disinclination of the buyers to take up stocks has stimulated the sales-

men in their efforts, and their determination to get business may account for the seeming freedom of the offerings. Gum, basswood and some other woods are in moderately good shape, with little or no change in the range of values, and with the Inquiry quite good.

The situation is, of course, influenced by the general conditions in business. Commerce is waiting on Washington, with its program of trust busting, currency perform and other measures which the Administration is trying to put through. When once this legislation is completed a revival in business may be expected. But while the uncertainty lasts, bankers are drawing in their credits, money is tight and in other ways the lumber trade, along with others, is made to feel the effect of the agitation.

Mahogany and Circassian Lumber & Veneers

¶ The largest assortment of finest figured Mahogany Logs, Lumber and Veneers in the country can be found at the Chicago plant of C. L. Willey.

¶ We are just in receipt of fifteen cars of remarkably superior Circassian Walnut Logs, large size, well-figured and of good color, which are now being cut into Veneers.

¶ A visit or correspondence from discriminating buyers of all varieties of fine Imported and Domestic Cabinet Woods in Lumber and Veneer is solicited.

¶ You will not only find the Willey warehouses well stocked with a superb collection of Circassian, Mahogany, Vermilion, Black Walnut and other fancy foreign and domestic lumber and veneers, but buyers are assured of prompt and painstaking service, and a quality of product not usually obtainable.

¶ To visit the plant take Blue Island Ave. car at the postoffice to Robey Street.

C. L. WILLEY, Chicago

Largest Fancy Wood Veneer and Lumber producing plant in the world

The export business is another factor in the prevailing quiet. Stocks abroad are either heavy, so that prices rule low, with the foreign buyers holding off because of their restricted needs, or the economic conditions are such as to check the movement, which is notably the case in Germany. As a consequence, much less lumber is going abroad, the exports are curtained, beaving more lumber to be disposed of in the domestic markets. Still, the export outlook is not discouraging, and some indications of improvement have been noted lately. The narrowed shipments have caused a reduction in supplies, and a better tone prevails.

=≺ COLUMBUS >=

Despite the severe storm which visited Ohlo about the 10th of November, the hardwood demand in all sections has held up well during the past fortnight. Trade has not slumped as much as might be expected under the circumstances and in fact since the weather has improved an increased demand is reported from certain lines. The tone of the market is good in every respect and the prospects for the future are believed to be good.

Both factories and yardmen are buying hardwood stocks, but the former is the best customer at this time. Concerns engaged in making furniture, while it and implements are buying steadily and other lines of manufacturing are also in the market. Factories are not accumulating stocks but are buying only what they desire for immediate needs. The retail demand is fair, although orders are generally small. As in the case of factory purchasing agents, yardmen are not inclined to increase their stocks at this time. They are approaching the semi-annual inventory period and also the winter season. Yard stocks are only light in all parts of the Buckeye State.

The car shortage is interfering with shipments to a certain extent and some delay is caused, especially from the hardwood fields of West Virginia. Mill stocks are not plentiful and this fact is taken as an indication that prices will continue firm at the levels which have prevailed for some time.

Oak, both quarter-sawed and plain, is in good demand and prices are ruling firm. There is also a good demand for chestnut, especially sound wormy. Ash and basswood are moving well at fair prices. Poplar is increasing in strength and the movement of the lower grades is one of the features. Other hardwoods are unchanged.

=≺ CINCINNATI ≻=

While there appears to be no change for the better in the hardwood situation it certainly is holding its own. Prices remain firm and dealers are not alarmed over the present duliness. Inquiries come frequently and the request is for almost every item on the list. Dealers reply with stiff quotations preferring to get the price or hold the stock, being confident of a better market soon. This is based on the known fact that stocks are low in the hands of consumers and none too heavy at mill points. Buying is still in small quantities and many mixed cars are shipped. Wholesalers who conduct yards are buying only about the amount equal to shipments and are content to keep stocks up to present size and let the future take care of itself. All low grades suitable for box making are in good demand, the box makers being very busy.

Plain oak in all grades is moving well and quartered oak in common and better is in good request. Dry ash in thick stock seems to be in greatest demand and chestnut in common and better shows a better call than for some time while sound wormy is in much better request than for many weeks. Sap gum is doing very well again in most grades but red gum in upper grades is very slow. The low grades of both sap and red gum move fast. Oak flooring is in fair demand but prices are not as strong as they might be. Poplar, except in low grades, is not doing very well but dealers in this wood are holding prices firm and fully expect to see this wood return to favor especially in bevel siding. The encouraging feature is the frequency of the small orders and month after month the volume has shown up fairly well, which is at least encouraging.

=**≺** TOLEDO **>**=

Business is not especially rushing in Toledo just at present, although conditions are fairly normal considering the weather and the season of the year. Yards are all well filled in this section and lines are not broken. Prices in general are holding fairly firm, although there seems to be a tendency on the part of ash and red and sap gum to weaken, following the trend of yellow pine, which is sadly downward. Oak is holding its own and plain oak continues a leader on the local market. Prices in oak are holding firm with no downward tendency. There is a decided car shortage here, although it is affecting coal and grain much more than lumber. Shipments are coming in slowly from the southern mills. There is a fair local demand from the building trades and a seasonable call from furniture and vehicle factories.

=< INDIANAPOLIS ≻=

The local hardwood business has continued to be comparatively steady during the last two weeks. Industrial conditions generally are gradually adjusting themselves throughout the state. Normal conditions are expected to prevail in most lines of business by January 1.

The industrial field has been passing through a critical situation during the last three months on account of credit limitations arbitrarily fixed by bankers. This has necessitated an increase in capitalization by

many concerns. The process of increasing apital has gene ahead slowly. The automobile industry has suffered most seriously, but is now extring on its feet again.

Hardwood prices remain unchanged. There is no large buying, but the volume of trade is approximately the same as it was at this time last year.

=< *MEMPHIS* **>**=

The hardwood market here continues healthy. There is hardly as much business as some members of the trade anticipated but shipments are going forward at a fairly steady rate and there is no particular accumulation of dry stock. Manufacturing operations are being conducted on a liberal scale which is accepted as evidence of the faith of lumber manufacturers here in the future of the hardwood market. There is a continued active demand for the lower grades of cottonwood and gum and sap gum moves without difficulty at full quotations. Red gum is perhaps a little more firm but the volume of business has shown no particular in-There is a good call for the lower grades of plain and quartered oak. The higher grades are perhaps a shade easier. Ash is in good request and a great deal of this is being delivered green. Cypress sells readily in shops but selects are only moderately active while the upper grades are reported slow. The car shortage has become a little more serious and lumbermen are claiming, owing to the enormous movement of the cotton crop, that there is more difficulty in securing cars and also in having them moved promptly after they have been loaded. However, this condition applies more forcibly to mills outside of Memphis than to those in this city. Export business is showing some tendency toward expansion and all together the volume of business compares quite favorably with the average for this time of the year.

=≺ NASHVILLE **>**=

The hardwood trade is quiet in this market, though dealers insist that business is up to about the same volume as at this time one year ago, The shipments being made are small, though numerous. Oak continues the best seller, and there is some demand for all of the leading native hardwoods. Oak flooring plants are handling moderate volume of business. The box trade, which has been slow, is reported some better. Furniture factories are buying about the normal amount of hardwoods.

=≺ LOUISVILLE >=

November promises to end as a fairly good month, and will certainly be up to the mark of the corresponding month of last year. While business has not been rushing, the manufacturers and wholesalers have managed to keep busy, practically all orders received being for immediate delivery. Buyers are ordering only as they need stock, but consumption is going ahead at such a steady pace that the total volume of trade handled has been entirely satisfactory. Quartered white oak is the leading item at present, quartered red being so scarce that even the occasional calls for it can hardly be filled. Upper grade plain oak is selling better at present than the low-grades, but all items are moving fairly well. Chestnut, poplar and hickory are dull, though some calls for thick poplar have been noted recently. Sound wormy is a good seller in the chestnut line. Cottonwood is fairly active. Red gum is selling somewhat better, though prices, especially on firsts and seconds, are badly off.

=≺ ST. LOUIS >=

There has been a slight betterment noticeable in the hardwood trade during the past few days, although business on the whole is not up to the general average done at this period of the year. Nearly all the items on the list are being called for. Plain white oak still has the lead in demand. Quartered red oak, choice red gum and wide popiar are more in request than they were a short time ago. Prices are stiffening up slightly. An improvement in ash is also reported with better prices prevailing. Cottonwood, in both upper and lower grades is increasing in demand. The requests for other items are fairly satisfactory.

=-< MILWAUKEE ≻=

While business in the hardwood market is holding up fairly well, trade is not so active as it will be after the opening of the new year. Were it not for the fact that building operations are keeping up unusually well for this season of the year, trade would not be nearly so satisfactory as it is. While ninety-seven of the leading cities of the country experienced a falling off in building operations of afteen per cent during the month of October, as compared with the corresponding period in 1912, Milwaukee showed a gain of two per cent over October, 1912. General building operations have been showing a consistent gain this year.

There is a tendency on the part of retailers to order only enough to meet their present wants, but wholesalers say that stocks are light in most retail yards and that it will be necessary for dealers to order more heavily after the first of the year so that they may get their stocks in readiness for the spring trade. The local sash and door and interior finishing concerns are buying only enough to meet their present wants, but the building activity means that most of these plants are being kept fairly busy. Stocks on hand with most of these concerns are light, another reason why business should take on new life after January 1. Prices are holding firm, pretty sure proof that holders of stocks have confidence in the future.

^{*} Indicates stock dry enough to ship within 60 days; remainder of items ready for immediate shipment. The item of Core Stock is a special grade, suitable for veneering over. This is thoroughly dry and we are prepared to quote an attractive price.

All Red and Sap Gum in grades of No. 1 Common and Better is Kraetzer-Cured, insuring the lumber to lay straight and flat and to be absolutely free from stain. Kraetzer-Cured lumber is of a soft mild texture and uniform color.

We have facilities for kiln drying and surfacing. Oak timbers, switch and cross-ties, car stock, bridge and crossing plank, we specialize on.

VIEW OF MILL SKIDWAY, WITH PART OF LOGS STORED IN BACKGROUND-WE HAVE 6,000,000 FEET OF SELECTED HARDWOOD LOGS STORED ON OUR MILL YARD.

There is a feeling in the trade that if anything like a normal business is received after the helidaxy stocks will be rather badly broken for the spring rash. The supply of northern hardwoods seems to be especially light. News from the Wisconsin lumber country says that the cut this winter will be large, but of course new stocks will not be available for use before next April or May. The demand for hardwood flooring is strong and plants turning out this line are more than busy. Birch and basswood are selling well, although the demand is not so strong as for maple. Low grades of northern woods are getting low in many instances. Plain red oak and quartered white oak seem to be the leading sellers in southern hardwoods.

____< ARKANSAS ≻=

The conditions of the hardwood market are somewhat improved over what th y have been for the past several months, and the manufacturers are taking a more optimistic view of the outlook. The continued dry weather during the past three weeks has enabled the operations in the woods to proceed. The unusually heavy rains during the month of October in this State made the conditions very unfavorable for woods operations, and rendered the logging men unable to get at the timber for sawing. Believing that it would be impossible to successfully operate logging in the bottoms during the rest of the winter season on account of the heavy condition of the ground, and realizing the short condition of the supply at the mills, the millmen were somewhat concerned. However, they are now taking advantage of the fair weather, and are laying in a supply of logs at the mills for winter sawing. The continued dry weather has also materially benefited the lumber industry in Arkansas in that it has enabled the farmers to pick their cotton and harvest the rice crops. Both of these staple crops had suffered considerably by reason of the excessive rains in October, and money was rather scarce among the farmers. Now, in spite of the somewhat damaged condition of the cotton and rice crops, these staples are being garnered, and converted into money. The volume of business, although not altogether satisfactory as yet, is greatly increasing, and fair prices are being maintained.

===**≺** GLASGOW **>**=

The timber trade of this section during the past month has been somewhat dull although, compared with the past three months, there is a little more animation being displayed, the tendency, however, being restricted to the supplying of immediate wants. The movement from the storage yards is nil but plenty is going into store. Of course the imports but now are far in excess of requirements, hence storing is being resorted to. However, if buyers are the least inclined to purchase, the brokers are doing their level best to meet with their views. This is giving the merchants the upper hand, a policy not for a moment to be considered, at least from the shipper's point of view, because if the merchant gets his say in the matter prices will not increase and certainly not retain the present level.

The freight situation caused quite a stir a few days ago when it was currently reported that freights were "going back." This is the case for cargo freights, although fixtures have been conspicuous by their absence, but liner freights still keep as before. This is the result of shippers requiring to make yearly contracts.

As indicated above recent arrivals have been fairly numerous. The steamship "Madura" from New Orleans arrived with a cargo of assorted hard and soft woods comprising chiefly oak boards and mahogany boards, hazel pine, whitewood and cottonwood and pitch pine lumber, California and sugar pine as well as Louislana red cypress. The deckload consisted of some 500 logs pitch pine, about half of which are reported to be sold. The bulk of the oak boards are being stored and also the mahogany boards, otherwise the shipment has sold fairly well. In the last few New Orleans shipments staves have been coming in in large quantities and the bulk largely of consignments. In all cases the staves have had to be stored and it cannot be understood why shippers will insist on sending the consignment lots, which comprise pipe and Canada butts when there is no outlet for them.

The steamship "Tapton," under charter Newport News and Baltimore to Glasgow, has arrived and this shipment comprises mainly railway and wagon oak planks, oak boards, walnut planks, walnut logs and whitewood boards in addition to maple flooring on contract. The bulk of the oak boards and wagon oak planks, chiefly 12"x5" and 12"x3½", are being stored.

A large quantity of hickory boards which came in on contract by the previous Baltimore steamer have been rejected by buyers on account of quality.

The Montreal liners arriving have been bringing in large quantities of birch plank and pine deals, the bulk of which have gone into store. The steamship "Ella Sayer" from Parrsboro, N. S., has arrived with a full cargo of Canadian spruce amounting to 1,400 standards. Very little of this has been sold and practically all is being stacked. The drop in freights will have a very adverse effect on this cargo.

Riga spruce still continues to come in and the latest arrival is the "Nord" with about thirty different parcels for various buyers. This shows how easy it is for small buyers to get separate bills of lading of their own and thus spoil brokers' chances of sale.

At the recent mahogany sale in Liverpool 2,000,000 feet sale measure are reported to have been sold.

Made from our own timber from one boundary, insuring uniform color and texture; manufactured at our new hardwood flooring

WHY?

WHY do more than 380 of the most prominent and successful lumber manufacturers exchange nearly \$30,000,000.00 of indemnity against fire loss at

Manufacturing Lumbermen's Underwriters

BECAUSE!

BECAUSE it is the oldest and strongest inter-insurance association among lumbermen, being now in its fifteenth year.

BECAUSE \$978,432.40 cash savings have been returned to members.

BECAUSE \$856,831.32 cash surplus, owned entirely by the members, has been accumulated.

BECAUSE \$2,443,029.00 has been paid in losses under prompt and equitable adjustments without resort to quibbling or technical controversy.

BECAUSE it was the first to settle lumber losses on a market value basis.

BECAUSE the regular, frequent and thorough inspections given the plants of all members help them to prevent fires, thus materially reducing both the fire waste and the cost of indemnity.

The Logical Location for Wood-Working Factories

With the scarcity of timber in your locality and the ever increasing demand for higher wages among employees, doubtless you find it difficult in your present location to realize the profits you once made.

If you are manufacturing furniture, carriages, automobile parts, barriels and boxes, crates or any product that requires wood, the Southeastern States of Virginia, North and South Carolina, Georgia, Florida, Alabama, Missispipi, Tennessee or Kentucky offer numerous excellent openings for any of these lines of business. The greatest supply of oak, gum, ash, walnut, hickory, pine and other timbers are obtainable in nearly every section of the Southeast.

Power is furnished at very reasonable rates

Power is furnished at very reasonable rates while labor is plentiful at a very favorable wage scale. Labor troubles are practically unknown in the South.

Along the Southern Ry., Mobile & Ohio R. R. and Georgia Southern & Florida Ry. are many cities and towns offering liberal inducements for the location of new industries. We can put you in touch with these parties if you will express a desire.

Room 805, Washington, D. C.

MISCELLANEOUS

OAK, POPLAR, ASH

and all other hardwoods, in all grades and thick nesses, can be readily sold if advertised in the Wanted and For Sale section of Harbwood Record. If you have a large stock you want to sell try a few lines in this department and see what a lot of inquiries they will bring you

For sale by HARDWOOD RECORD, 537 S. Dearborn St., Chicago, Ill. 50 CENTS EACH.

WANTED-HARDWOOD LUMBERMEN-

to try the Gibson Tally Book. The three-throw aluminum tally ticket cover accommodates any form of ticket desired. The use of the special triplicate tally ticket supplied, printed on water-proof paper with carbon backs makes tallies unalterable. For durability, convenience, accuracy and for systematizing the inspection of lumber the Gibson tally method can't be beat.

Special forms of tally tickets mailed on application. Covers sold on approval to responsible concerns.

HARDWOOD RECORD,

537 So. Dearborn St., Chicago.

GIBSON TALLY BOOK

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets—4, x81 inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket. Gives large area of four tickets for complicated tallies, or straight grade can be made

Accommodates any form of tally ticket desired.

on one page.

Special, patented, triplicate tally tickets supplied, printed on waterproof paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability-covenience, accuracy, and for systematizing the inspection and measurement of lumber

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

American Forest Trees

By Henry H. Gibson

Edited by Hu Maxwell

"AMERICAN FOREST TREES" is a comprehensive work of more than seven hundred pages, illustrated by more than one hundred full page pictures of forest types of tree growth, and hundreds of minor pictures.

It answers every question worth asking about the infinite variety of forest growth in this country, and the utilization of these woods in lumber and other forms. The opinion of an

expert on this work is:

"AMERICAN FOREST TREES" is the foremost contribution that has ever been made to American forest and lumber literature.

The price of this work is Six Dollars (\$6.00) net. It will be sent on receipt of price, prepaid, subject to return and refund of payment if it does not prove satisfactory

The very complete character of this work may be judged by the index following:

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS. VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak. We make no two-ply stock, and do not employ sliced cut

quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Custom Mill Work, Storage, Inspection

Foreign Fancy Woods, Mahogany, Cedar, Circassian

We receive the logs, store or warehouse them, manufacture them into lumber, cut or saw veneers, pile and store the product, and ship via any railroad. Also furnish inspection returns on logs or lumber. Can furnish accommodations and economies which it is impossible to secure elsewhere. We always have on our yards parcels of plain and figured African, Mexican and Cuban Mahogany, Circassian Walnut and Cedar logs, placed here for sale by direct foreign shippers, from which advantageous purchases can be made.

Astoria Veneer Mills & Dock Co.

Long Island City, New York

${f V}$ eneers and ${f P}$ anels with a ${f R}$ eputation

M/E manufacture Veneers in all the native woods and for all purposes. Also Built-up Panels in native and foreign woods—three and five-ply—and have established a reputation for furnishing high-grade material. Send us your inquiries and orders and become one of our satisfied customers.

Underwood Veneer Co.

Wausau, Wis.

For Veneer and Panel Manufacturers

Your Consumers' Lists Cost You BIG MONEY

We can save it all and relieve you of all the detail and effort necessary to tabulate consumers' wants. Our Card Index System of those wants, just out, is the result of systematic effort. It is endorsed by your competitor. Can You Afford to Give Him that Advantage?

OR DISCRIMINATING BUYERS wanting a Clear Board for first class shelving and other similar purposes there is nothing that will surpass our CLEAR HEMLOCK. It is bright in appearance, light in weight and is odorless and durable. We make it in 6", 8", 10" and 12" widths, as also 13" to 20" wide. In addition to this, we have all other grades in Hemlock Boards. Also you should try the soft quality of our Smoky Mountain Chestnut. In No. 1 Common and Better grades we can supply it 60% 14' and 16' lengths. The widths are most desirable and the manufacture perfect. Also we have a nice assortment of 5%" Panel Poplar 28" to 36" and 36" to 44" wide or can be assorted in widths as may be desired. This is the genuine soft yellow Smoky Mountain Poplar. Also do not forget we are in position at all times to cut to order high grade Poplar, Ash and Maple.

OUR DOUBLE BAND MILL-HUTTIG, ARK

Why We Can Give "Value Received"

We own one hundred thousand acres of the best virgin Southern Hardwood timber.

We operate large band mills at Huttig, Ark., and Deering, Mo.

We cut FORTY MILLION feet of hardwoods annually and carry 15,000,000 feet IN STOCK.

We sell only stock cut on our own mills and so can GUAR-ANTEE the quality of EVERY shipment.

We ship high grades that increase the size and percentage of your cuttings, reduce factory costs and shrink the waste pile. Therefore:

We can SAVE YOU MONEY on every shipment of oak, ash, gum, elm, cypress, tupelo, hickory, cottonwood, sycamore, soft maple and dimension.

LET US PROVE THIS ON YOUR NEXT ORDER

Newest Hoosier Band Saw Mill

We have been building band mills for thirtyfive years and this New Hoosier Band Saw Mill represents the experience of these years.

The simplest mill in construction and the easiest kept in order.

We build this mill in three sizes, 6, 7 and 8 ft. The widest saw the 6 ft. mill will carry is 10"; the 7 and 8 ft. mills will carry 10, 11 or 12" saws. This mill is built in a substantial manner and embodies all that is latest and best in Band Mill design. The base is of the heavy extension pattern and is so constructed

that it does not overhang the foundation but extends completely around the mill. By means of the construction of the column the upper wheel runs in the center of the mill and is supported both above and below the mandrel. The bearings are long and are chain oiling.

The tension device has roller bearings and is very sensitive and durable. The upper guide is raised and lowered by power and is nonbreakable. The lower guide is so arranged that it can be opened quickly. The roll back of the saw is power driven.

The 6 ft. mill will split a 48" log and lay down a 30" board between saw and column; the 7 ft. will split a 54" log and lay down a 36" board, the 8 ft. will split a 57" log and lay down a 42" board.

The Sinker-Davis Co., Indianapolis, Ind.

Makers of Hoosier Saw Mill Machinery

HARDWOOD GATEWAY OF THE SOUTH

Do you buy at the lowest price or in the best market?

CHREWD business men have learned that one dollar will usually purchase just about one hundred cents' worth of material or service. They know that the chronic bargainhunter may secure some mighty low prices once in a while. and also that he gets stung on some pretty cheap merchandise just about as often.

The wise plan is to seek the best market, where you may be sure of getting full value for your money; and where there will be no question about service, about responsibility, about making good on errors of any kind.

Such a plan is not only safe for the buyer, but likewise enables him to save energy, often spent in worrying over a poor purchase, in the more important details of his business.

The Louisville Hardwood Market is Headquarters for · Plain and Ouartered Oak, Ash, Poplar, Hickory, Cottonwood, Gum; for Veneers and Panels; for everything, in fact, in the hardwood line. We want your business on this basis: full value for your money, and a square deal always.

Review and Outlook

General Market Conditions

CONFLICTING REPORTS concerning the general conditions in the lumber business throughout the country make it very different to arrive at any accurate analysis of the lumber market. From some quarters come the most optimistic reports indicating that mills are sold practically up to the saw, these reports coming from points both in the North and South. On the other hand, these statements are offset by reports of a much more unsatisfactory nature, indicating that there is more lumber at the mills at some points than is desired, while from the consuming centers representatives on the ground are really complaining very seriously regarding the general state of affairs.

Considering the matter from the mill viewpoint, it is really true that quite a number of mills are undoubtedly sold up on their stock and are selling right up to the saw at present. In fact, one large southern hardwood mill concern, which is typical of the Indiana and Kentucky mill sections, states that this will be the biggest year in its history, and this concern has seen some pretty big years in the past. Then again, there is a class of mills whose reports show that while they are not sold up to the saw, the total aggregate volume of orders is equal to normal at this time of the year, and they are maintaining a fair level of orders as compared to cut.

Then there is the third group-mills whih are actually accumulating lumber, but it is very gratifying to note that in the majority of such cases these accumulations are in very strong hands and are really being held because the owners of stocks are not willing to let them go at below what they believe the lumber is worth. It is to be hoped that this course will prove within the next month or two to be wise. It is deplorable that the hardwood mill trade as a whole is not in a sufficiently strong position to follow the same policy, as such a policy, if carried out, would unquestionably react favorably upon both the buyer and seller. As it is now the buyer is constantly shopping for lumber, perhaps in some cases believing that he will get cheaper lumber if he waits. The result is that both the buying and selling ends are somewhat demoralized, neither one following its regular course, which necessitates great expense in selling and great uncertainty in buying, without the usual satisfaction on either side.

As is usually the case in dull times, the buyers as a whole are chowing a tendency to be much more technical in their inspections and as a result there are more than the ordinary number of kicks. It is also a fact that collections are poor. If there were no other indication, the slowness with which this office is receiving checks would indicate that the lumber trade generally is not getting its chare of cash any too quickly.

As suggested heretofore in this column, the nub of the whole situation is undoubtedly the attitude of the banking element of the country regarding loans, as there continues to be absolutely no apparent indication of the fundamental weakness in industrial or trade conditions. It is not likely that the proposed administration currency bill will have any effect directly in itself upon the business man, and it is problematical as to whether or not it would really hurt the banker.

We heard constantly when the postal savings bank was proposed that if it were actually put into operation the banking system of the country would be completely demoralized, and the country would go to ruin. That the exact opposite has resulted is pretty generally known. Bankers are now predicting the same results if the administration currency bill is passed, and it is logical for the layman to draw the same conclusions regarding this measure that he has drawn from the conditions surrounding the postal banks.

The average business man is pretty well convinced that the main thing is to get this administration currency legislation accomplished and at least try it out. It is of course possible to amend it if it proves utterly incapable of taking care of situations that might develop. There is apparent a noticeable expression of resentment on the part of the business man toward the banking element for its attitude regarding the administration measure, and the business man wants non-interference of this measure so that it may be passed at the earliest possible moment, and he seems to be willing to take the consequences of any dire results that might ensue.

President Wilson's recent expression on the trust question, in which he stated that the object of the administration's course is not to over-throw all combinations but simply to definitely define the workings of the Sherman anti-trust law, is already showing a good effect.

It is probable that with this currency measure and the trust regulations definitely shaped up, the main disturbing factor will eventually be hesitancy resulting from recent tariff revisions. As to that question, any changes that might have been effected have certainly not been broad enough in their character to have a permanently deterring effect upon business in general.

Getting back to the lumber business, the stock condition is strong as suggested even with the weak condition of buying.

It is generally reported from export sections that the export business has been more active during the last week or two than for some little time. The general situation of the different woods is not materially altered, quartered oak being a strong item, with plain oak perhaps a little weaker throughout the country but not exceedingly so.

It is pretty generally stated that offerings of gum lumber are a little firmer as the result of the recent incorporation of the gum as-

at or digital consists at a catact definitely resulted in a funcin that all some a tenteric is united generally that the present level at mortely in many scene of the assemisal stactory if it is realized that these values, generally speaking, compare unfavorably with the unusually high level of values that was in evidence before the present

Probably the best policy is to stand pat as far as possible with the idea of sizing up the trend of conditions for the first of the year, as there are good indications in many sections. There is nothing really weak in stock conditions in the North, as any large stocks are in strong hands in that section. The same is true of the South. In the Memphis territory there is of course quite a little lumber, but the indications are that there will not be any undue quantities manufactured during the coming winter.

Above High Water

AINS MAY DESCEND and floods may rise, but there is small likelihood that the swinging bridge featured in the cover picture of this issue of HARDWOOD RECORD will be in danger of disaster. It is stretched from hill to hill, and the stage of the water beneath it is of little moment. The structure is not even hung from cables above, as the custom is with suspension bridges, but the cables run beneath the bridge's floor. There appears to be nothing to protect the structure against the force of the wind, and the real danger apparently comes from wind rather than water. At any rate, a person whose brain is not proof against dizziness has little business on the bridge, even when the air is as serenely calm as it appears to have been when the camera caught the object.

The photo is from the rich collection at the Field Museum of Natural History, Chicago. The location is at Granite Falls, in the state of Washington. It might be presumed that this is a summer resort and the bridge is one of the attractions, and belongs in the class with aerial railways, shooting the chutes, and threading the labyrinth; but such is not the case. The bridge was built for business, not for show or amusement. It is the creation of an ingenious western lumberman who had a lot of shingle bolts on one side of the river and wanted them transported across to the other side. He figured that it would be easier to stretch cables from bluff to bluff across the river than to grade a road down to the stream, build the bridge low down, and grade a road up the opposite bluff. The western man has a certain dash about him which is not afraid to take short cuts to the end sought. The bridge is a sample.

It looks like a risky place for a footman, and passage across by a mule might be thought an impossibility; yet the bridge was made for mules, not footmen. A track is laid and a light car, loaded with shingle bolts, makes many a journey a day. The artist did not succeed in catching the mule at the moment the picture was snapped, but nevertheless the level-headed mule is a regular traveler across. He has never yet fallen off, and, of course, he never will more than once; for if he falls, his fall may be compared to Mulciber's in Paradise Lost: "From morn till noon he fell."

The river and the forests might be mistaken for a scene among eastern mountains. Hardwoods are mixed with the conifers, but the western hardwoods are usually of small value compared with those of the East.

The Tap Lines Win Out

THE COMMERCE COURT on November 26 handed down a decision remudiating the provided of cision repudiating the previous decision of the Interstate Commerce Commission regarding the status of the tap line railroads. The former decision of the Interstate Commerce Commission was directly · against the tap lines while the recent decision of the Commerce court is, as stated, directly the opposite.

Briefly, the basis of the decision was the expressed belief of the court that service performed by the tap line road for a certain shipper owning that road in full or in part, must necessarily be classed as interstate commerce when similar service performed for other shippers is so considered. The court also suggested that it may in some cases be held that the tap line is merely an adjunct to the plant in the service that it performs, but that as soon as similar service performed outside is adjudged interstate commerce, that service as performed

for the proprietary supper must come under similar classification,

The court in making the decision admitted that such a ruling might give the opportunity for practices that are not legally correct. but stated that this ruling is based entirely upon the legal viewpoint that the Interstate Commerce Commission must necessarily formulate regulations that will prevent such evils rather than cutting off the revenues of the carrier.

Thus this long-standing controversy is brought to a successful culmination, agreeable to the interests owning such lines,

The State's Rights Contest

 Γ HE DOCTRINE OF STATE'S RIGHTS came to the surface for a few hours during the Conservation congress in Washington, and then disappeared. It was the old question, whether the water powers, irrigation projects, forests, coal and other natural resources situated on government land, and whether the land itself should be turned over to the states in which those resources lie. In that event the government would get out of the land business; national forests would be things of the past; reclamation projects would change hands; the Alaska coal fields would be thrown open to speculators; and certain states would come into possession of billions of dollars worth of property which belongs to the whole people.

The fight on the floor of the irrigation congress was extremely vigorous for a short time; but when a vote was taken the majority against the measure was overwhelming. Thereupon some of the state's rights delegates denounced the convention.

There are no politics in the state's rights question now. It is a business proposition, and party lines have nothing to do with it. The charge has been many times openly made that large private interests are active in the fight to get those vast resources out of government control, and turn them over to certain states. At any rate, the state's rights fight, regarding that property, did not wax warm until after the government adopted the policy of administering those enormous properties for the benefit of the whole people, instead of selling them or giving them away in such a manner that they fell into the hands of specu-

The contest was carried to the Conservation congress by state's rights advocates, for the prestige it would give them if they could win. A victory for them there would have been the first step toward carrying the fight to the United States Congress. There are a few men in that body who have made it known that they would be glad to espouse the fight for state control, which in most cases means private or corporation control of natural resources. It is a safe guess what the stand of the American people will be on this question, if an opportunity is ever given them to express themselves.

Wood's Opportunity

HE VIGOR AND ENERGY displayed in the interest of the Forest Products Exposition scheduled for Chicago and New York next spring guarantee success so far as bulk of exhibits and number of visitors are concerned. That is only a portion of the success possible. The purpose of the exposition is to increase the use of wood, or at least to hold the ground which it now has.

The fight is against substitutes. There is no disguising this fact. Whatever ground has been lost by wood, if any has been lost, has gone to the multitudes of substitutes and makeshifts which in recent years have been pushing to the front with remarkable vigor in wellplanned campaigns to capture markets. Manufacturers of forest products must meet their rivals and fight to retain what is now held, and to recover any ground that has been lost.

Something may be learned by studying methods followed by manufacturers of substitutes when they place their products on exhibition. The man with something of metal to sell, or of cement, asbestos or any other material which is to be substituted for wood, does not content himself with showing to his prospective customers a crude mass of the material which he uses; but he shows the finished product, so that its appearance when ready for use, and in use, may be judged. If it is metal, he exhibits a panel of ceiling, or a partition, a filing

cabinet, a curt wheel, or with constructions in the market. It has substituting ashestow or slate independence, he shows the finesce, slaughe or the complete root, are restricted in keyl the cross material. It has some it, the region element from the construction of wood, he is not apt to roll out a barrel of cement and invite his prospective customers to look at it; but he shows them the most perfect floor he can make, and endeavors to create in them a desire for something like it.

That is advertising and it is the kind that counts. Those who have commolities made of wood ought to follow the same course. As far as practicable, the finished article should be exhibited. An oak scantling and an oak plank will not attract half the attention that will be drawn to a fine table, calbinet, picture frame, or some other of a hundred finished articles that might be made from the plank and scantling. A pile of elect lamber will interest only the man who is in the market for lumber; but if made up, it will attract scores of people who would not look a second time at the rough lumber.

There is no question as to which will bring best results. The approaching exposition is an invitation to the public to come and see what wood is good for, how write is its range of uses, and how well it meets all practical requirements. This end cannot be attained unless a pretty complete line of manufacturing is carried out. Ray material, exhibited in bulk, will not bring the desired result. Of course, the most that can be expected of an exhibitor is that he will show in the best possible way the commodity which he has for sale. It that is done, the exposition as a whole will be a success. Wood will be shown superior to the host of substitutes which are endeavoring to force their way into markets long held by wood.

This will be the first time that a special exposition in the interest of forest products has been held, and it will attract wide attention. For that reason a great opportunity will be wasted if the best possible showing is not made.

Architects and Furniture Dealers

T HE CONTROVERSY between furniture dealers and architects concerning the advantages and disadvantages of built-in furniture is not a lumberman's fight. He will sell the wood, no matter whether the sideboards, cupboards, bookcases, and window seats are built in when the house in built or bought separately afterwards. It will take about the same amount of lumber in one case as in the other, the difference, from the lumberman's standpoint, being in the purchaser—whether it is the furniture factory or the planing mill which fills the architect's or the builder's orders.

A considerable change is taking place in the interior finish of houses, particularly in cities. Permanent fixtures are gradually taking the place of movable furniture. The bed that disappears in the wall was one of the first innovations to encroach directly upon the domain of the furniture manufacturer. The excuse for the innovation was the need of saving space in crowded apartments. Built-in book-thelves and cupboards always had a standing, but the idea has lately been carried farther than ever before, and these necessities and luxuries are being multiplied. The unmovable sideboard came next. Architects took advantage of the opportunity, and popularized the innovation by making it harmonize with the interior finish of the Tooms much better than was possible if the sideboard were purchased ready made and set in place. The icebox follows the same course, and is hidden away in a corner where it is not much in the way and is almost out of sight.

The window seat has not yet put the davenport out of business, but furniture dealers are afraid it will. Hatracks and clothes presses are in the same list. A furniture journal recently predicted that the time would soon come when about the only furnishings a family would need to buy when moving into a new house would be a few chairs and rugs.

The custom of including much of the furniture in the permanent finish of houses is only following a practice which had long prevailed in other quarters. Banks, stores, saloons, and many offices are equipped with permanent fixtures, which constitute the kind of furniture needed in carrying on the particular line of business intended. The manufacture of such fixtures is a large industry in this country.

The architect suggests many advantages of fixed furniture for resi-

dences. Its harmonious effect is one of them. Its chempiess and convenience are others, because there are no moving fulls to pay or damages to make good when families come and go. On the other hand, the furniture manufacturers and dealers are not without argument on their side. They charge fixed furniture with being insanitary, and they protest against the monotony when looking at the same objects and the same arrangement year in and year out. The privilege of buying new things, when the old have grown tiresome, is denied. Cheapiess of the permanent furniture, they say, is more apparent than real; for its cost is figured in the rent, or in the price if the house is sold.

Humanitarianism Pays

THE NEW THOUGHT seems to apply nowadays as much to methods of handling labor and in getting the highest efficiency from them as it does to the mere installation of modern equipment. Various ideas have been trued out with more or less success in this connection, but one which promises to be unusually successful is being put into operation by a large southern veneer concern located at Louisville, Ky. For years the management of the Kentucky Veneer Works, the concern in question, has been bothered each holiday season by the countless requests of small advances of five or ten dollars to tide over the employe during the holidays. These advances were not only annoying but in many cases resulted in actual loss to the company.

For some little time this concern has been working overtime several days in each week and the idea was suggested by the mill foreman recently that in order to induce the men to remain satisfied under the overtime conditions and at the same time to successfully take care of the advance money requests, the workmen be asked to allow the company to hold up all overtime payments, the company to agree to add ten per cent in each case to the amount of overtime due on the payday before Christmas. The idea not only took immediately but the men have been doing their utmost to make the overtime pile up. In some cases quite a nice sum is already due to the better paid men and before Christmas comes around the aggregate held in trust will be quite considerable. However, this concern figures that it is more than breaking even on the arrangement, besides avoiding all the annoyance and apprehension of loss that was formerly experienced under the old methods. The idea seems entirely a feasible one and it might be that it could be successfully carried out by other concerns.

Forestry for Laymen

ONE OF THE COMMITTEE REPORTS submitted to the recent Conservation congress in Washington contained the following pointed conclusion: "Too many schools are turning out professional foresters, and not enough are teaching forestry to the layman." This criticism of American forestry schools was doubtless not intended to be as sweeping as it seems. It is a criticism of omission rather than commission; a charge that this branch of education in America is growing lopsided by developing the theoretical at the expense of the practical. It may be inferred that the remedy lies in more education for the man who owns timber and cuts lumber, and less catering to that branch of forestry which deals with tree planting, estimating the yield a hundred years ahead, studying the habits of dominant and tolerant species, and numerous other phases of the science, which are interesting but not very important in this country now. In other words, the point of the criticism seems to be that there are too many men who know why and too few who know how.

A concrete case will illustrate what the committee probably had in mind when it made the report. A timber company in the Lake states employed three graduates of three high-class forest schools and sent them, each to a different camp, to oversee the log cutting. Instructions were to bank the ash, basswood, and elm logs separately. It turned out that not one of the foresters could separate the logs according to species, and all were thoroughly-mixed at the dump. These young men could have formulated a plan of management for a planted forest, according to the books, from the seedbed to the final harvest eighty years in the future; but that was not the problem that faced them when they went into the Michigan woods. They had been thoroughly drilled in European methods, but not in the practice of the woods where they worked on their first jobs.

V''Taymar I rester,'''s en as the committee recommended an its report, would have known ash from basswood. He might not be thoroughly grounded in such technical books as "Schlich's Manual," but ac would make good at a sawin it. He would recognize the commer cial timbers; could tell good from bad; could cut logs without unnecessary waste, build roads, throw rough bridges across streams, haul and skid the logs, saw the lumber, stack it intelligently, would know when it was dry enough to ship, and would have some ideas on the subject of markets. In addition to this, he would be able to plan fire protection, and could fight fire, and look out for a future stand of trees, as far as his circumstances might allow.

These accomplishments may be acquired partly in schools, partly in practice. The man so trained is not a substitute for the professional forester, but an assistant. The complaint appears to be that the forestry schools are turning out too many bosses and not enough workers.

The South

A PROMINENT SOUTHERNER now residing at Memphis, who has made a distinct and enviable place for himself in the business and political world by sheer perseverance and force of character, states that the number of real, live, native-born southern hustlers is comparatively small. This statement coming from a true-born son of the South is especially conviacing and merely backs up the opinion of most northerners getting closely in touch with general conditions in the southern states.

It can be safely said that the development of the South has come through the shrewdness, business ability and hustle of northern business pioneers who have had the courage to undertake the opening up of the tremendous resources of that section of the United States. One sees constantly the steadily increasing influence which the North is having on the southern development, and even a casual study of the personnel of the business element in the southern states shows that beyond doubt the statement referred to is correct.

The same man made the statement that the South will never really begin to develop until such time as it awakens to a realization of the possibilities of manufacturing its own raw material. Some time ago HARDWOOD RECORD pointed out that it seemed a foolish policy to pay high freight cost on veneer logs, veneer and imported furniture woods from southern points to northern furniture manufacturing sections, and then to pay a further heavy charge for hauling the finished product back to southern markets. This condition is true not only of lumber, veneer and other products of the forest, but it is true in many of the other lines wherein raw materials are derived from the southern field, shipped to the North for refining or manufacturing into the ultimate product, and then reshipped to the southern markets in the final form.

The tremendous development that would unquestionably result immediately upon the application of a new system in the southern states is beyond estimate. The establishment of one furniture factory, for instance, in a southern city would mean the employment of a large number of operatives, who would not only maintain themselves but their families in the community wherein they were employed. If this idea were carried out as far as feasible in this particular line, the number of new homes which would be built and furnished in the South would offer a tremendous field for the sale of various products going into homemaking and maintenance. This result would be multiplied hundreds of times over by the establishment of similar remanufacturing establishments using the various other natural resources found in that part of the country.

The ultimate result would not only be a great economic strengthening of the southern states, but would mean an equalization of the burden of maintaining mankind throughout the country. Instead of the impractical "back to the farm" cry, which is constantly being forced into the cars of the city workingman, who would in ninetynine cases out of a hundred make absolute failures as farmers, the cry might well be "go to the South where you can continue in your present line of effort, probably under much more favorable conditions than now surround you"

Whatever may have been responsible for the astounding development in the South, it is to be hoped that the element making for that development will persevere until it has secured a still further development that will embrace the conditions suggested.

An Excellent Selection

THE ELECTION OF JOHN M. PRITCHARD of Memphis, Tenn., to the secretary-ship of the newly organized Gum Lumber Manufacturers' Association, speaks well for the wisdom of the members of the board of directors and officers of that organization. Mr. Pritchard comes into his new duties well equipped in every way to carry them through to a successful conclusion.

It cannot be denied that the most important feature of an organization of this character is that it secure the services of a secretary who is thoroughly competent to not only carry on the routine work, which is really the small part of the association's efforts, but to so exploit the purposes and ideas of the organization that the entire trade will come to realize that it cannot afford to withhold membership.

Then, too, there are other very important matters which will come under Mr. Pritchard's direct supervision, such as the preparation of the exhibit for the Forest Products Exposition, which exhibit will offer gum manufacturers the very opportunity they have been looking for, and also the matter of successfully broadening the general market for gum along other lines as previously outlined.

The Gum Lumber Manufacturers' Association is starting under auspicious conditions, and now that it has secured the services of one so well equipped to successfully handle the office of secretary, it is entirely within bounds to predict that within the near future this will become recognized as one of the most important and efficient organizations in the country.

It is interesting to note also that at the recent meeting of the board of directors, a definite policy was adopted putting the association on record as being entirely neutral regarding its relations with other lumber organizations.

Some Valuable Suggestions

THE PAPER READ by Henrik Cronstrom of Kaukas Fabrik, Finland, before the members of the National Veneer & Panel Manufacturers' Association, which met at the Auditorium hotel, Chicago, on December 9, contained some mighty valuable suggestions that could very well be given due consideration by American veneer and panel manufacturers.

Mr. Cronstrom's paper described the veneer industry as it is carried on in Russia, where it has attained large proportions. His outline of the processes in vogue in that country indicates that their methods are 'entirely different in a great many cases from the methods employed by American manufacturers. It must be confessed that Mr. Cronstrom's close comparison of the results obtained by the two methods would not in all cases indicate that American methods are the best, although it is probably a fact that they are best adapted to American conditions. However, his paper was full of suggestions covering different phases of the process of veneer manufacture.

Of particular interest is Mr. Cronstrom's detailed description of the process of steaming logs under pressure, and the most excellent results that are gotten thereby. This suggestion is entirely worthy of the fullest consideration on the part of American manufacturers, and, inasmuch as it has been conclusively proven that the very highest type of results can be gotten through the steaming of lumber under pressure after sawing, it is reasonable to suppose that equally satisfactory results will be secured by the employment of Mr. Cronstrom's suggestions.

This paper was but one of the many which were invaluable to members of the veneer and panel association. The close attention that was given to all the papers read and the excellent attendance that was maintained throughout the business sessions, would indicate that the results of this last meeting will prove to be greater than the results of almost any previous meeting of this organization. It is yearly proving of more and more value to its members, and there is no reason why it should not eventually expand to embrace the entire veneer and panel industry, so that uniformity of all methods of manufacture, merchandizing, accountings, etc., will be accomplished, with the resultant benefit to the entire veneer and panel industry.

And he who for riches and 2004 cuts to act.

Can easily cop what another earns

And still be a man "for a' that," says Burns Mother o' mine.

TWO VIEW-POINTS OF THE HARDWOOD LUMBER SITUATION

It depends somewhat on how you spend your time.

A Gentle Knock

"That girl has pretty hair," remarked the young man.

"Yes," said the damsel he was with, "and she has some at home that is even prettier." -Courier-Journal.

Busting Loose

"I love to go into a 10 cent store."

"Why so?"

"Even a man with a dollar bill can bust into one of those places and buy recklessly."—Courier-Journal,

Making the Children Spell

Joseph P. Tumulty, secretary to President Wilson, tells of a former member of the Jersey City board of education who, upon a visit to one of the schools, took a reader from the teacher's hand and addressed the nearest little girl.

"My dear, can you spell 'eggpit?' " he said.

The little girl didn't recognize the word, but was willing to take a chance, so she said:

"E-g-g-p-i-t."

"Erroneous-can anybody else spell it?" the inquisitor asked, looking over the room.

Other children tried. Some spelled it with one g, others with two t's. Still wrong. The

member of the board had his big finger on the word and knew. He turned to the teacher.

"Of course, ma'am, you know how to spell it?"
The teacher blushed and confessed that, while
she was not familiar with the word, she would
expect it to be spelled as it sounded—"e-g-g-i-t."

"Not familiar with it!" roared the guardian of the public instruction. "Not familiar with it it's right here in the book!"

The teacher looked and saw the word-Egypt.
-Minneapolis Morning Tribune.

Taking No Chances

A little city boy could not be persuaded to visit the farm and people could not understand why. At last he took a friend into his confidence and said that he had heard about the threshing machines they had on the farm— "And," said he, "it's bad enough by hand."

No, Indeed!

The old lady stopped outside the mirrored compartment and belligerently faced the boy in buttons.

"Well, I declare! If you think for one min ute that I'm goin' to pay my good money for that pig-sty with a foldin' bed, you're mistaken. I suppose you think that just because I'm from the country---"

"Get in, ma'am," returned the boy in disgust. "This is not your room. It's the elevator."

In Bostonese.

A New York man in Boston was overtaken by hunger late one night. He entered a quick lunch restaurant, perched himself atop of a stool, and said to the waiter: "Sinkers and coffee."

"Sinkers? Sinkers?" said the waiter. "To what do you refer, sir?"

"Sinkers are doughnuts in New York," the customer explained.

"Oh, I beg your pardon," replied the waiter.
"Here we always refer to them as submarines."

New York Tribune.

Cheap Enough

"Last evening a beautiful girl sat beside me at a dinner and whispered that she considered me the cleverest man she had ever met."

me the cleverest man she had ever met."

"What was the result?"

"It cost me \$4 for a taxi." Chicago Record-

Herald.

A Trip to the Caucasus

Editor's Note

EAST Broomed to R. S. Bacon Venear Company, Chicago, I. 1, and John N. P. 1. deat the Penrod Walnut & Veneer Company, Kansas City, Mo., returned about two weeks ago from a most interesting visit to the home of the Circassian walnut, the Caucassia mountains, in the province of Trans-Caucasia, Russia.

Mr. Bacon and Mr. Penrod made the trip to consult with their foreign representative, Henry Hoffman of Batum, Mr. Hoffman does a large business in assembling Circassian walnut logs for distribution throughout the world. Mr. Bacon has been kind enough to supply Hamiwoon favout with a story of his trip and a number of first-class photographs allustrating the character or the country and its inhabitants.

Lee and stack produces the Cura's an walnut tree has been aptly ealled the "Cradle of Civilization."

Mt. Ararat, upon which Noah's ark rested, is only a few males from Talks, now the capital of Russian Trans-Caucasia and formerly the capital of the Georgian kingdom. It is quite probable that history has made a slight mistake and that the famous dove brought back a walnut leaf and not an olive leaf, as the walnut grows on higher ground.

The trip to the Caucasus begins when the steamer leaves Constantinople for Batum, and we were fortunate in catching the Austman Lloyd steamer, "Stamboul," a very comfortable ship. The view of Constantinople from the out-going ship is most picturesque. We pass the old walls, the government buildings, the palaces of the Sultan, and the forts that command the Bosphorus. On both sides of this narrow waterway rise beautiful hills, and, wherever a house can hang on, is a Turkish home. I don't believe there is another ten miles of more beautiful scenery in the world than the Bosphorus. The first stop of any importance is Samsoun, where the boat spends the entire day discharging its cargo into small

R. S. BACON, CHICAGO.

boats. The Turks do not believe in improvements and there are no docks on the entire Turkish coast. We went ashore and after

wandering around most filthy streets we finally saw the sign in English, "Expert Leaf Tobacco," and here we found four Americans who buy seven million dollars worth each year of Turkish tobacco for American cigarettes. We were received like long-lost brothers and enjoyed a delightful dinner at their comfortable home. If we had not gone ashore, I would say that Samsoun was a most beautiful city, with its white and pink houses against the soft green of the mountains as a background. After close contact with the dirt and stench of the narrow streets one forgets its beauty and remembers only its vileness. In the streets of Samsoun are many queer little wagons with no seats. The Turks sit cross-legged on the floor. It's a common sight to see a fat Turk, probably weighing two hundred and fifty pounds, riding on a patient donkey scarcely larger than a good sized dog.

On a hill behind Samsoun one can plainly see the ruins of the ancient city of Amysos mentioned in the Bible as the land of the

ing skill would be taxed to place their there. How the ancient sa eeeded will remain one of the secrets of history.

It was a funny sight to see a Turkish barber at work on his victim who sits anywhere in the

street and is shaved without the

Tribizonde is the last stop before Batum. Here the Caravans started for the interior of Persia in the year 401 B. C. The famous retreat of Xenophon and his ten thousand Greeks ended here. Here he reached safety and found supplies for his exhausted troops after a march of 1,500 miles through hostile country.

The Caucasian mountains are located at the extreme southeast corner of Europe, in Russia and form a solid wall, seven hundred miles long and extend-

ing from the Black sea to the Caspian. These mountains are from eight to sixteen thousand feet high and in the entire seven hundred miles, only two passes are known. The Caucasian mountains have been a barrier between Europe and Asia since the world began and army after army has gone to pieces against them. On the north slope of the Caucasian range, are the Steppes of Russia, with a climate about like Dakota and from this region comes the well-known Cossaek. In a distance of about seventy miles the climate is entirely changed and the south side of these same mountains enjoys a sub-tropical climate and here grow olives, oranges and palms.

The history of the Caucasus begins in tradition with Thargamos, a great grandson of Japhet, son of Noah, and later this land was the scene of the Greek Argonautic expeditions. It was near Batum that Jason found the Golden fleece and slew the dragon that breathed fire from his nostrils. The people in the beginning were Argon tribes. Alexander the Great and his army conquered part of the Caucasus and Pompey's Roman legions later held the coast, after which came the Byzantine Empire. Then for a long period the Mongols from across the Caspian sea under Tamerlane held the plains and coast and in turn were driven back by the Arabs who controlled in the eighth century. Venetians, Persians, and Turks each in time, held more or less of this historical part of the world, but through all these changes, the Georgian kingdom remained a nation from 302 B. C. until the beginning of the nineteenth century, more than two thousand years. During all this period the invading army held the coast and parts of this country, but the native had only to return to his mountains

and remain unconquered. Each nation or tribe, however, left some of its people who internarried with the original Cancasian and formed villages of their own, and today covering only a few miles simmers this strange melting jot of many nations. The Russian nation has been the only one throughout all time to completely comparthis country, and rather than live under Christian rule, between four ruld five hundred Mohammedan Circassians left their mountain homes and emigrated to Asia Minor. Under Russia the country has enjoyed a long period of peace and prosperity. The Georgians and Circassians make fine solchers and many of the Czar's regiments are formed of them. The Russian policy, however, is to keep the Cancasian regiments in some far away section of its vast domain and the soldiers in the Cancassa cand there are many,, are from Russian Poland or north Russia, In this way the soldiers and the people have no interest in common.

The Circassians are a proud race and are justly noted for their good looks, both male and female. One blot on their history, however, is the fact that they sold their daughters to slave dealers, and the harems of Turkey and Egypt were filled with Circassian and Georgian girls. To the credit of Russia, this disgraceful truffic was stopped in 1774. Their homes are nearly always in small villages in order to protect them from Kurds or other lawless bands. Their dwellings are dug out of the hill sides, stones forming the front. A Caucasian village looks much like a village of the Pueblo Indians. The natives are very primitive and many queer customs prevail. No

pictures adorn the walls and few home-made chairs. They are great lovers of food and drink but a knife or fork is not considered necessary. A traveler is always welcome and a guest is made much of. The best wine they have (and they make wonderful wine from their native grapes) is produced and a banquet held; the host expects his guest to drink much, it being considered a great compliment to become intoxicated, this proving the excellency of the wine and the guest's approval.

Circassian walnut grows in all parts of the Caucasus, but prin-

cipally in Mingrelia and Circassia. The main value of the trees has been the crop of nuts, which have been an article of trade for centuries.

The walnut trees originally were planted in the same manner as

ONE OF HOFFMANN'S YARDS. MR. PENROD SEEN IN NATIVE GARB.

CIRCASSIAN LOGS ON BEACH AT BATUM.

any orchard, but there have been so many wars and invasions, that an entire district might be depopulated and for many years deserted and in this way sections that originally were orchards, appear to be

wild growtts of walnut forests. The best trees for veneer purposes come from the district of Good a oot and Sukhum, one hundred to two hundred miles north of Batum and from the shore line back twenty miles or more. The best colored wood grows high in the mountains and a some cases apparently out of solid rock. The trees growing in such places are small but of a very fine color, with

strong light and dark contrast. The trees growing in low places are larger and more free from defects, with less color, mostly brown, similar to Turkish wal-

I was able to get a good picture of one of Mr. Hoffmann's producers, a genuine Circassian. The revolver and long knife are always in evidence and the Circassian gentleman is most care ful of his dress and quite a dandy. The costume is never complete without the knife and revolver. Across the breast are two diagonal rows of cartridges, a relic of former grandeur. The laws forbid real cartridges, so all now wear wooden imitations with inlaid silver or carved bone tops. These producers go back in the country districts to small villages, buy a few trees from one man and a few from another. sometimes only one tree being bought. The logs are collected and hauled by oxen or water buffalo to the nearest stream and as soon as the logs are dry enough to float, they are sent down to the coast. Very often there is no stream and the logs are hauled miles over the rough mountain roads, Small sailing vessels carrying about fifty tons bring the logs to Batum or Poti, where the exporters receive and sort them. The day we reached Batum, a small ship was unloading, the boat could not get nearer the beach than one or two hundred feet, so the logs were thrown over-board and two men up to their arm pits in water, tied ropes around them while twelve or fifteen men pulled them out on the beach. It would seem a very slow and expensive process, but labor is cheap (about seventy-five cents per day), and time is never considered when "east of Suez."

The burls have been in great demand for many years and are practically exhausted. Burl

hunters now go across the Caspian as far as Bokhara. It is necessary for a log buyer to speak several languages or dialects for the manner of speech changes in almost every section. The gentlemen in this picture, with almost no education, speak four languages and many dialects. It is easy to see how difficult it would be for any American to travel and secure logs from the natives.

The logs arrive in Batum just as they are felled, with bark and sometimes limbs on them, and it is here, in the sorting and trimming yards, that the wonderful adze men do such beautiful work. It is a study to watch them new and adze these logs. They never seem to make a miss cut and the log when finished looks as though it had been planed. A large per cent of the log is wasted as most of the sap has to be cut off and many thousands of feet have thus gone into chips. In these yards work Turks, Armenians, Persians and Tar-

tars, all with long knives, often to the outsider, apparently ready to kill each other; but, I understand, not much quarreling and very little fighting occur. The Turks are very devout and stop work at certain hours, wash face. hands and feet, go through their prayers right on a log or anywhere they happen to be-it makes no difference to them how many spectators they have. One of Mr. Hoffmann's yards is in the Turkish part of Batum and entirely surrounded by Turkish homes, and a poorer class of people it is hard to imagine. The women seemed industrious and were quite often about the yard drying clothes on the logs or picking up chips for the fire. Their faces were always covered with a black mask or shawl, not even their eyes showing. It is a mortal sin for any man other than their husbands to look on their faces, and they guard them most carefully. Circassian walnut has been

used locally for many years and some of the oldest furniture is made of solid walnut. The workmanship is crude and as cabinet makers the Circassians do not excel. Batum is the principal port for exporting walnut, and while some logs are sold in Europe, America now takes a very large percentage. The government imposes a heavy export duty on all shipments and this, together with the high freight, forms a very considerable part of the cost. Add to this the fact that the exporter must buy entire lots from the producer and often has to receive logs he cannot ship. These poor logs are an entire loss for there is no market in Batum for inferior logs or lumber. It can readily be seen that these conditions will cause Circassian walnut to remain one of the most expensive of woods.

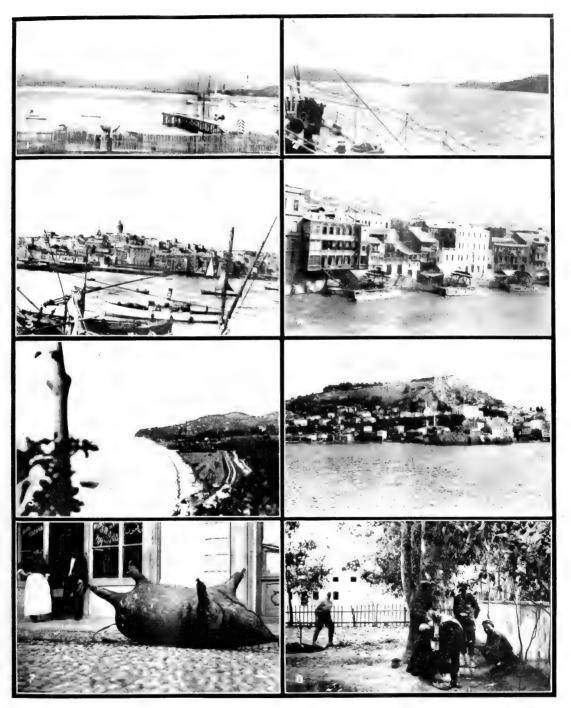

LOG WAGONS ON STREETS OF BATUM

THE BEAUTIFUL GEORGIAN ROAD, THE MILITARY PASS MAIN-

TAINED ACROSS THE CAUCASUS BY RUSSIA.

The scenery of the Caucasus is wonderful. There can be no more beautiful coast than that of the Black sea with the snow-capped mountains that rise majestically from the water. This old country has many wonderful advantages and some day its natural beauty and resources will advance it to a great place among the sights of the world. Then Switzerland and the Canadian Rockies will have to take second place among the famous

Many strange and interesting sights are seen on the streets of

1. HARBOR OF BATUM, SHIPPING POINT FOR CIRCASSIAN WALNUT. 2, THE BOSPHORUS EUROPE ON ONE SIDE, ASIA ON THE OTHER. 3, TOWER OF GALETA AND PERA, CONSTANTINOPLE. 4, WATER WHEELS RUNNING MODERN MOTORS FOR LIGHTING, 5, LOOKING NORTH FROM BATUM INTO THE CHICASSIAN COUNTRY, 6, TYPICAL TURKISH TOWN ON BLACK SEA, SHIPPING POINT FOR TURKISH WALNUT, 7, TRADITIONAL MOHAMMEDAN WINE CASK CLEANLINESS NOT A PRE REQUISITE. 8, SAMSOUN BARBER SHOP—NO SOAP OR WATER USED

Batun. Mohammedan pilgrins from Bokhara cross the Caspian on their way to Mecca, some of them with beards, teeth and finger nails dyed a carrotty red. Queer looking home-made carts, constructed entirely of wood, even with wooden pegs for nails, and pulled by the water buffalo, are common in this section. The Russian regiments all singing as they march are most entertaining. Falcons are still used by hunters and we saw several returning after a day's hunting, with a good supply of small birds. A funeral procession in this land has some features that seem odd to an American. Four men carry the lid of the coffin on their shoulders, and following them are six men carrying the coffin with the deceased plainly in view of all. Wine is made in the country districts and brought to Batum in goat skins, pig skins and sometimes oxskins. I am told they are not always too sanitary. Oncer looking little victorias which are called droskies are ever present ready to take you on a gallop most anywhere in Batum for twenty five kopecs, which is equal to about twelve and a half eents in our money. Batum has a fine boulevard and bathing beach and every day there is "September Morn," The beach for men and women is separated only by about two hundred feet of air, not even a wire fence. Not a bath house in sight and both men and women undress on the beach and take their bath, "au naturel"—not a bathing suit on the entire beach.

I noticed men both at Batum and Tiflis with strings of beads in their hands or around their necks. I thought it was something like a rosary and had some religious significance, but I found out that it was worn only by men who did not smoke and was used as a plaything to keep their fingers busy.

The Russian calendar is fourteen days behind ours and it seemed strange to arrive in Batum as we thought on October 2 and find out it was September 1s. Batum was part of Turkey until 1878, when the treaty of Berlin gave it to Russia and since then the Russians have made wonderful improvements and built a new Russian town with paved streets and fine parks.

The old or Turkish Batum remains unchanged with Mosques, bazaars and coffee shops. Everything is done in the most crude way, just as it was done in the time of Christ. The Mohammedan does not want new civilization and says that when Mohammed returns to earth they want him to find everything just as he left it and he probably will unless woman suffrage extends to Turkey and the ladies get a chance to change things.

Talk to Gum Manufacturers

Editor's Note

The following communication, although somewhat radical, is printed without comment. It is written by an interior mish manufacturer, who, owing to unsatisfactory experience with gum, twice abandoned its use; but latterly-laving secured gum that was seasoned in a satisfactory manner, has become an enthusiast over it.

The writer has noticed that a gum manufacturers' association has been formed for the purpose of furthering the sales of gum, and educating the consumers of lumber up to the desirability of gum as a substitute for other woods.

The millstone around the neck of gum is substitute.

No other wood occupies this undesirable position.

Is oak a substitute? Is poplar? Is ash? No; they stand on their own merits.

The very name, "gum," carries a burden of opprobrium.

This probably applies more particularly to the domestic trade; but at that, the exports of gum for 1912 (60,000,000 feet), were pitifully small, representing only the good end of the cut of eight or nine ordinary mills.

The writer's first introduction to gum was in 1888. At that time considerable effort had been made toward introducing gum on its merits; and quite a number of architects were impressed enough with its beauty, and what was still more appealing, its low price, to specify it for interior finish.

The results, however, were discouraging and disappointing. The material was restless and tried its best to leave the wall to which it was nailed and crawl around the room.

How much of the gum you are shipping today is as straight as poplar? \cdot

The writer's first view of gum was of a pile of base blocks, about fifty in number, whose dimensions were 1%''x34'''x7''. These blocks had warped from 14'' to 34'', and were so very crooked that the dimensions are vivid to this day in his memory.

This trait showed up everywhere, and gum got so black an eye that no one wanted it at any price. Persistent salesmen occasionally persuaded reluctant consumers to try it and only incurred the enmity of the customer afterward.

Of course better methods of production and better methods for re-manufacture came with the years; but today, gum is being used principally because other woods have gone so high in price that it is cheap enough to permit of its use.

Would gum be used $\tilde{g_0}$ any extent today if poplar, basswood, birch, etc., were at the same price level?

What a humiliating position for a beautiful and honest wood; the bulk of it used only because it is cheap!

This beautiful wood a substitute when it ought to hold its head high and point to its surpassing qualities!

Get away from the word "substitute."

Fine every man in your employ who uses this word a thousand dollars,

Consign this word, once for all, to the limbo of oblivion,

You are selling a wood that is *superior* to poplar, to basswood, to birch and the rest of the close-grained woods.

Suppose you could ship gum of any width (box boards included) that is as straight and flat as poplar.

Couldn't your salesman talk enthusiastically on the following points as compared to ordinary poplar:

Perfect as to being flat and straight.

Stronger by far.

Can be brought to a smoother surface; consequently will take a better polish in finishing.

Will not split as easily.

Comes in more desirable widths and lengths.

Is "springier,"

Is harder; therefore is not so easily marred or dented.

That it has a far richer and more pleasing appearance.

That it has more character and "life."

Suppose you could ship gum that will hold its shape after it is finished, better than ordinary poplar.

That the tendency to come and go under varying atmospheric conditions is almost entirely eliminated.

That the tendency to warp and twist is gone.

That it can be kiln-dried in less time.

That it will not shrink appreciably in kiln-drying.

That it will not ease-harden in kiln-drying.

That it will increase the capacity of the customer's kiln.

That it is a thoroughly dependable and honest wood.

That it will not rot or decay as easily; therefore has a longer life.

And then, could not your salesman end up with: "And it's a

blasted shame that I'm quoting you this price."

Suppose that besides, you could effect an economy of from three to four dollars per M in the production of this kind of gum, and in addition reduce your investment in slowly drying lumber by anywhere

from \$10,000 to \$25,000, wouldn't this interest you?
Why not put gum "on the map" as the lumber?

Quite a number of your neighbors are producing this kind of gum.

Every producer and user of "Kraetzer-cured" lumber is cognizant of these facts.

A RE-MANUFACTURER.

Minnesota's Wood-Using Industries

Minnesota is one of the latest states to publish a report of its wood using industries. The report comes from the press of the State Forestry Board at St. Paol, and s malos analy printed, acceptately if Instrated, and its appearance creates a favorable impression.

The field work on which the report is based was carried out by John T. Harris, statistician in the United States Forest Service; and a chapter on the state's 1 mber resources has been added by William T. Cox, forester for Minnesota. It is, therefore, a work done under a co-operative agreement between the federal government and the state of Minnesota. Its purpose was to collect data on the uses of woods by factories. The output of sawmills did not fall within the scope of the investigation. It is an account of what becomes of lumber after it leaves the sawmills, or so much of it as may be converted into products by further manufacture. Lumber and timbers used in the rough for building purposes are not included.

The state is rich in both softwoods and hardwoods. The former predominate in quantity, the latter excel in variety. The last primeval forests of white pine in the United States are in Minnesota. The areas where this valuable softwood is found contain large amounts of Norway or red pine, jack pine, spruce, tamarack, and lesser quantities of other softwoods. Further south in the state are situated the hardwood forests. The regions where timber of this type abounds in largest quantity are known as the "Big Woods." Clay soil prevails there and the land is being cleared for agriculture as the stands of timber are removed. The principal hardwood mills in Minnesota are situated in that region.

The state forester estimates the value of Minnesota's timber resources at \$975,000,000, which does not take into account the prospective value of second growth which will be cut in future years. The state's area is \$4,282 square miles, of which 5.637 are water, and 52,000 forest. There are 8,000 lakes. These are rapidly silting up; 2,000 former lakes have already disappeared, and it is predicted that 3,000 others will disappear in the next fifty years.

The annual demand for lumber for further manufacture is 958, 025,398 feet, as is shown by statistics in the report. Approximately, 125,000,000 feet of this consists of hardwoods, of which nearly half is made, up of birch and basswood, but twenty-three other hardwoods are listed. The total number of woods reported is forty-five. The accompanying table lists these woods, together with amount of each used, and the average cost of each.

SUMMARY OF WOODS USED ANNUALLY IN MINNESOTA

		Cost per
	Feet b. m.	1,000 feet
White pine	463,208,450	\$16.51
Norway pine	169,192,979	15.74
Jack pine	65,241,422	13.91
Spruce	46,312,000	16.45
Tamarack	31,575,301	15.91
Birch	30,780,044	21.76
Basswood	24,278,769	15.30
Douglas fir	19,597,271	25.72
Balm of Gilend	13,118,000	15.15
Red oak	12,773,189	36.71
White oak	12,487,106	42.47
Hemlock	10,004,168	12.22
Sitka spruce	9,457,020	22.40
Aspen	8,236,500	12.77
Balsam fir	7,491,600	15.08
Sugar maple	7,414,287	26.92
White ash	5,342,189	32.30
Shortlenf pine	3,480,647	31.61
White elm	2,984,337	18.08
Western white pite	2,227,000	29.18
Cottonwood	1,594,519	26.17
Western yellow pine	1,533,800	29.53
Chestnut	1,041,850	24.08
Western red cedar	943,231	27.09
Black ash	938,403	29.58
Red gum	872,880	29.16
Western hemlock	872,600	15.41
Yeliow poplar	821,187	54.07
Cypress (bald)	819,862	36.14

Longleac pine	600.761	20.94
Cork elm .	561-664	18.00
Mahogany	481,405	152.47
Northern white cedar	250,000	13.71
Silver masses	3.29 5.12	22.60
Hickory	244 400	56.42
Black walnut	161,639	104.08
Cherry (black)	155.540	0.7 569
Redwood	1.35.295	27.12
Butternut	120,000	35.61
Sugar pine	75,000	40.00
Western jarch	61.249	30.09
Spanish cedar	att tient	35.00
Beech	20.0000	22.00
Circassian wa.nut	15 0000	200.00
Post oak	10,000	40,00

The raw material does not all reach the factories in the form of lumber, though most of it does. Some arrives as bolts and billets, and some as saw logs. In the latter case the whole process of manufacture from the log to the finished product is carried out in the same establishment.

Twenty important and many minor industries in Minnesota use wood is some form as raw material for further manufacture. The smallest industry which is separately considered in the report is boat building which demands only 107,000 feet of lumber a year; the largest is planing mill products with a total demand of 667,021,508 feet. The others range between, as is shown in the accompanying industry table. The total cost of all reported raw material was \$16, \$44,033. Approximately 133,000,000 feet, of the total of 958,000,000, was grown in the state.

The waste problem in the woods and at the mills is still serious in Minnesota. No such headway as Iowa has shown has been made in solving it. The latter state wastes little, because sawdust, bark, chips, and all kinds of wood scraps and refuse find market near the place of production. Wood is scarce in Iowa; but in Minnesota it so plentiful that waste finds little sale except in the towns of larger size. In the forests, where most sawmills and many factories are situated, nobody will buy what can usually be had for the asking. Consequently, large amounts of refuse material go to waste, which could be sold at a profit in more thickly settled regions. It cannot be profitably shipped where markets exist, because transportation charges are prohibitive on that class of material.

The lumber statistical department of the government seems to have lost quite a string of sawmills in compiling figures of the lumber cut in 1912.

Borrowing money and running in debt are two familiar roads to trouble, yet without these business would shrink more than it ever has in panic times.

The Lumbermen's Round Table

THE PRICE AND THE SALE

that at this time, when trade is seasonably quiet, and business conditions are bleevise afterior Lysion important factors as the proposed currency revision, it may be well to quote the wise saying of a leader in the hardwood field on the subject of cutting prices:

"The dealer who resorts to a reduced quotation in order to close a sale," he said, "seldom does himself any good, but only disturbs the market. Under ordinary conditions reducing prices does not stimulate the demand, but simply means taking the available business with a reduced margin of profit. It is the exceptional buyer who will order a car that he doesn't need simply to get a bargain; and in most cases when a sale is made at a cut price, it could have been made at the standard quotation just as well. It takes a little more salesmanship to handle a buyer without yielding to the temptation of reducing prices; but who wants to be a mere order-taker?"

SHALL IT BE QUANTITY OR QUALITY?

The old debate between sawnill men on the subject of cutting the lumber for quality or quantity still comes up occasionally, and some pretty good points can be scored on both sides. It is true enough that conditions have changed radically in recent years, with the growing scarcity of hardwood timber and the constant advance in price. This advance has proceeded more rapidly than that on labor, so that if there were ever anything in the argument that it is worth while to sacrifice a little in output in order to improve the grade, it is all the more cogent now.

The happy medium is the only solution of the problem. Nobody wants his sawyer to waste an unreasonable amount of time turning over the log and figuring out how he can cut it so as to make the most lumber; nor does the average millman like to see a slambang run that turns out stock in unusual quantity but kills the grade. The sawyer who can keep the production up and not overlook any bets in the way of increasing the percentage of firsts and seconds is a real jewel, and is generally appreciated, and he realizes that both features of his work are important.

At the same time, it is porobably true that in the small mill the quality end of the argument ought to be given first place, while in the large one, with big overhead expenses facing the operator, the only way out is to keep the production up to a high mark.

EXCHANGE OF CREDIT INFORMATION

A number of local lumber clubs have endeavored to make use of the information which their members possess regarding credits by exchanging data on this subject. The plan usually decided upon is similar to that used by the general organization, that is, the secretary or other executive of the association keeps in his office a list of firms upon which reports have been made, and at the same time maintains a file of letters and other written information upon which the reports are based. The latter feature is of particular importance, because it has been pointed out that the only danger to which a club exposes itself in transmitting information regarding the credit or general desirability of a customer would result from the distribution of reports which are not backed up by evidence in the form of letters from its members. Legal advice on this point is to the effect that when a list of names is sent out, with the specific purpose for which it is to be used-eredit information-noted upon it, and with sufficient data in the office of the organization supporting the report, no trouble with the authorities need be anticipated.

DON'T TAKE AN UNEARNED DISCOUNT

In connection with the point noted above, the growing tendency on the part of members of the trade to exchange credit information, lumbermen and others should remember that deducting a discount from a bill after the discount period has passed makes them legitimate material for inclusion in a list of undesirables. This is as bad as being slow or uncertain in paying, unfair in grading and measuring, having a poor rating or possessing any of the other disqualifications for dealing with other business concerns. Houses which are irreproachable otherwise, from a credit standpoint, frequently acquire a

very nonestable to p vation among the trade just by virtue of trying to get something to which they are not entitled in the form of unearmed discounts; and the concern which is as jealous of its reputation in this regard as it ought to be will not run the risk incident to taking the alluring two per cent when it isn't entitled to it. The victim of such a deal may accept the check and say nothing, but sooner or later the act, if repeated, will be a business indictment the terms of which are generally familiar.

ARE YOU A SPECULATOR?

When a cotton spinner takes a contract to deliver 100,000 pounds of cotton yarn between now and next May, for example, he immediately covers his requirements by purchasing 100,000 pounds of cotton, plus a fixed percentage for waste. He declines to speculate in what the market is going to do in the intervening months, but assures a profit on his manufacturing operations by getting the cotton at the price basis he used when he quoted the buyer of yarns for May delivery.

A lot of lumbermen are in the habit of making contracts with consumers to supply lumber during the ensuing twelve months at a given price without having bought the logs which are to be used in manufacturing the lumber to be delivered on that contract, or otherwise anticipating the situation and avoiding a loss in the event the price of lumber—and logs—should go up. The lumberman may object that it is impracticable to buy logs that far in advance of manufacture, and it would be bad business to carry more than three or four months' supply ahead. If so, why make contracts?

Isn't it true that the chief reason why contracts are broken by sellers as well as buyers—the latter side of the situation has been discussed pretty often, so there is no need of going into it here—is in order to avoid a loss brought about by an unfavorable change in the market situation? That being the case, the contractor ought either to make sure that his costs will not be excessive, by buying or contracting for timber ahead of time, or quit making agreements which he may not be able to fulfill.

"I won't sell anybody lumber for delivery more than three months ahead," said a leading member of the trade not long ago. "To get a contract involving large blocks of lumber it is necessary to sell at current prices, or lower; hence when you make a contract of that kind, you are simply wagering on the market remaining stationary or declining. In view of the general tendency of hardwood values for years past, the odds are against the seller. Besides, if the price goes down, you run the risk of the buyer wriggling out of his contract. For these reasons I have passed up the annual contract as a poor form of salesmanship."

TELEPHONE AND TELEGRAPH

"One of the best ways to get an order," said a lumber salesman who is wise to most of the wrinkles of the selling game, "is to use the long-distance telephone. Frequently I have missed getting business, and then called up from my next stop to offer the buyer a special proposition of some kind. He is naturally impressed with the fact that I regard the proposition as important, or I wouldn't be using the 'phone, and not infrequently I land him. That involves getting the confirmation by mail, but ordinarily isn't difficult."

In the same connection the head of the collections department of a well-known concern said recently that the use of a wire to a delinquent customer will have more effect than anything else. It shows the debtor that the lumber house is in earnest, and that the account must be given attention.

"Don't use the telephone on cases of this kind, however," advised the collection expert. "The man who owes you can tell his tale of woe so easily over the 'phone that it's hard to insist on action, while the cold, crisp message of the telegraph makes a response necessary."

If that car shortage could be made to curtail lumber production instead of delaying shipments it would have a good influence on the market and profit the manufacturers.

Remarkable Wood Preservation

Nature's work has man's beaten to a standstill. A sample of wood preservation, discovered at La Brae, near Los Angeles, Cal., proves this. The modern timber engineer thinks he is doing pretty well if, by the use of oils and poisons, he can lengthen the life of wood two or threefold; if he can add ten or twenty years to the period a log will last.

Generally speaking, it is nature's way of working to destroy the old and use the material in building something new. The poet expressed it: "The granite rocks disorganize to feed the hungry moss they bear." Decay, the world over, is simply a process of preparing material for a new creation. Forests have been rotting since and before the carboniferous age, and the process still goes on,

vet there is no decrease in the amount of forest. Nature is no miser, hoarding away valuable things, but believes in use. Yet, occasionally, nature becomes a miser and saves something by "withdrawing it from circulation." In the damp woods of Washington and Oregon instances are well known where fallen tree trunks, buried in moss, have remained sound several hundred years. Cedars lying in the bottoms of New Jersev swamps have still longer records. But the periods during which these have been preserved are brief indeed when compared with the record of a piece of redwood tree found in a natural deposit of asphaltum in southern California.

Asphaltum is supposed to be a product or a by-product of petroleum. It exists in veins and ledges, nearly as hard as stone, as in the "uintaite" of Utah, and the "manjak" of the Barbadoes; as lakes of the consistency of pitch, as in Venezuela; and as deposits of various sorts, on the surface of the ground or beneath it, in many parts of the world.

During the present year some remarkable finds have been made in asphaltum deposits at La Brae, near Los Angeles. A pit has been unearthed which has been termed "the prehistoric animal trap," because it was filled with bones of extinct animals, embedded in the asphaltum. The discovery is attracting wide attention from scientists, and in some ways it is the most remarkable ever made in the world. The circumstances under which the bones are found indicate that ages ago a pool or well of soft asphaltum existed there, with an opening at the surface of the ground, and that animals in their wanderings through the region ventured on the surface of the treacherous tar, sank, perished, and accumulated at the bottom. Thirty tons of skeletons have already been taken from a pit fifteen feet in diameter, and the bottom has not yet been reached.

Not only is the quantity of bones remarkable, but the kinds are no less so. Among them is the three-toed horse, the buffalo, giant sloth, elephant, camel, mastodon, saber-tooth tiger, and others. They have not yet found the skeleton of the neolithic man, but they are looking for it. More saber-tooth tiger skeletons have been taken from that pit than have been found in all the rest of the world up to the present time. The evidence seems conclusive that beasts of prey frequented the place to feed on animals which had stuck in the soft

asphaltum, and were themselves caught in the treacherous magma and perished with the victims on which they had attempted to feed. Judging by the enormous collection of bones, the trap may have been at work hundreds of years. It caught more beasts than were ever seen in any menageric from Rome's colliseum down to Barnum's day.

The famed and beautiful valleys of Los Angeles had different inhabitants then from those there now. Huge mammats, both herbivorous and carnivorous, must have been appallingly abundant. The buffalors were larger than those of today; the giant sloths were capable of devouring vegetation in amounts to equal the work of the hippopotamus in the sudd fields of the Nile, and the size of the

skeleton of the three-toed horse seems to identify it with what scientists have called "the forest horse," "the flectest quadruped that ever lived on earth."

The man who deals in wood will be interested in what the pit contains in his line. A hint as to what trees then grew on the Los Angeles hills is interesting. A log was found standing on end in the midst of the bones. A small piece of the wood has been examined for Hardwood Record, and it bears witness to many things calculated to inspire serious thought.

How old is it? No man knows. Its geological age has been determined within certain limits, but this cannot be expressed in years. It has come down from early pleistocene time, if its age is judged by the company in which it was found. Though that time is recent, as the epochs of geology and astronomy are reckoned, it belongs in unrecorded antiquity, measured by human history. Man may have been, and probably was, on the earth when the log found lodgment in the asphaltum where it has lain ever since, but there is no sure way

STRUCTURES OF ANCIENT AND MODERN REDWOODS COMPARED

The LaBrae redwood on left, modern redwood on right. A A medullary rays: B B, summerwood. The common wood cells are perpendicular: The small circles on the cell walls are openings connecting one cell with another. Through these the sap of living wood circulates. The ancient and modern woods are drawn on the same scale, considerably magnified. Note the fineness of structure of the LaBrae specimen compared with the modern.

of determining the time in years. It was before the close of the Glacial age, perhaps before its beginning. The time antedates the intrusion of the fields of ice from Canada, which pushed southward two thousand miles, reaching within five hundred miles of the Gulf of Mexico.

It is probable that the presence of polar ice so far south—which period or periods must have lasted several hundred thousand years—drove the sloths, camels, and other tropic animals out of what is now the United States, or froze them to death. If the La Brae animal trap ceased to gather in prey before the ice invasion from the north, an age of 500,000 years seems conservative for the log in the asphaltum pit.

An examination of the wood under the microscope reveals several most interesting facts. It is of the sequoia genus, an evergreen, cone-bearing tree with thick, stringy bark. It is closely related to the present day "redwoods" and "bigtrees" of California. It is probably an extinct species, but its near relationship is obvious. The exceedingly slow growth is remarkable. The annual rings are so close together that the naked eye cannot distinguish them. From ninety to one hundred of them are required to measure an inch. The only modern trees matching that in slowness of growth are those found

at an even care, are a force of a status, or in the far north. It rep to that if 6 , verifying set to treach a diameter of our foot.

The results street extends a large redwood is very similar to that efficiency in the proof to former are much smaller. The accompanying drawing shows the two woods side by side. The right half is redwood from the region north of San Francisco; the left half is the redwood from La Brac. The cells of the latter are about one tenth the size of the modern wood. Their actual size may be judged from the fact that several million of them could be packed in the green of a cubic inch.

The drawing shows a radial section—cut from the heart toward the bark. Though the ancient wood is amber-colored, the thin shaving shown in the drawing is so transparent that objects may be seen through it, as if it were glass; yet the minute pits or holes in the cells, through which the sap circulated when the tree was living, are clear-cut and distinct. Compare the delicate texture of the La Brae wood with that of redwood, as the illustration shows them side by side. Redwood is exceedingly fine grained, yet when it is compared with the ancient specimen, it looks like carpet alongside of lace.

The wood is not petrified, as Arizona's prehistoric logs are; nor carbonized, as most woods are which are found in figure beds; but it is as fresh and natural as if it had grown a few years ago. It is a sample of perfect wood preservation. The cells, when highly magnified and seen in cross section, show that a slight compression has taken place, which is not surprising in view of their being weighted down by tons of asphaltum for half a million years. The effect of the compression is seen in the slightly rhombic instead of squarish contour of the cells in cross section. However, the resin cells, bordered pits, and even the tori (little trap doors which opened and closed the perforations of the cell walls) are perfectly preserved.

Chemical forces have not been wholly idle during the vast ages during which the sequoia log lay in the bottom of the asphaltum pit. This work was done inside the cavities of the "food" cells—those in which the tree's surplus of food was stored. Their contents have been chemically changed, as is evident in a considerable density and darkness of color in the contained material. Change is apparent also in the failure of the wood to respond to chemical tests to which the modern sequoia wood responded readily. The test for tannin is one.

Globules of resin are visible in the vertical wood parenchyma or resin cells. This proves the wonderfully enduring properties of this resin. It has been soaked in asphaltum during hundreds of thousands of years, and remains unchanged, or only slightly changed.

The wood seems to have about the hardness of California redwood of the present time. In that remote period sequoia grew 400 miles farther south than any grows now. Its presense in southern California, which is now a region of little rain, is proof of profound climatic changes since then, because sequoias belong in a damp, cool climate, wholly different from the present climate of southern California.

The most interesting feature of all remains for mention. It is connected with the wood's preservation. Of course, timber that is shut away from air cannot decay, and the most remarkable thing is not the fact that the wood was preserved, but in what the microscope reveals inside the cells. The tree was apparently alpeady dead, and decay had attacked it before it was buried in the asphaltum. The evidences of this are the threads of fungus visible within the cells. Fungus is the agent, the cause, of wood decay. The microscope reveals these minute threads, which are as small as spider webs. They are seen in the position in which they penetrated wall after wall of the cells, working their insimuating way through the wood. Their activities came to an abrupt end. This may be presumed to have happened when the log sank in the tar-like substance and took its place among the skeletons in the bone pit where modern explorers have unearthed them.

During the unmeasured ages which have passed since then, the delicate fungus threads have been preserved so perfectly that they seem to have ceased their activities only an hour ago. During that time stupendous changes have occurred on the face of the earth. Ice

from the north descenced thousands of miles, "grinding like the mills of God," crushing mountains into fragments, filling valleys, changing the causes of rivers, making and destroying lakes, shearing the summits from peaks, and excavating to the foundation rocks of the continent. Whole races of animals have been swept away. Forests were destroyed, and have crept back inch by inch during unrecorded time. Climates have changed and sensons have shifted. Following all this came the transformations due to man's presence since history began. Yet, untouched by any change during that vast time, the delicate threads of fungus—so delicate that a breath would break them—have lain at rest, among the fibers of the wood which was equally well preserved, to be brought to light again after five hundred thousand years, to give man a glimpse into nature's laboratory, and a lim of the matchless perfection of her work.

Further Evidence Wanted

It is claimed for Dr. Martin Kleinstueck of Germany that he has discovered a method of coloring wood in a few hours while the tree is still growing. The process is not minutely described; but the explanation offered is that a dye is fed to the tree's roots and is carried to all parts of the trunk, limbs and even the leaves in a single day, and that the color so imported is permanent.

In the absence of further proof that this can be done it is well to be slow about believing it. There is nothing new in the mere fact that coloring matter can be introduced through the roots of certain plants, and that the flowers, leaves and other fibres will change color. Florists have long turned the trick to their profit; but in their case the stem and foliage so colored are living tissue. Sap circulates through all parts and carries the dye with it.

The coloring of the wood of a tree is a different proposition. It might work so far as the leaves and sapwood are concerned, though even that is doubtful in case of a large tree. It is not explained in what manner and through what channels the coloring matter is to reach the heartwood. That part of the trunk is dead to all intents and purposes. Sap does not circulate through it. The water contained in the fibers is practically stagnant. What movement it has is exceedingly slow and irregular. It is not apparent, therefore, how dyes entering through the tree's roots can find their way to the heartwood in the short space of one day or even of hundreds of days. Of course if it has been done, the fact can be accepted and theories must yield; but until it has been demonstrated it is safe to remain a disbeliever.

The claim does not stop with the living tree, but it is asserted that coloring matter may be injected into logs and will penetrate to every part in a few days. Another doubt is due here. Shavings and thin pieces of wood may be so colored; but difficulties increase in geometrical ratio as the pieces increase in size, and when they attain log dimensions it is practically impossible to force the liquid to the center within a brief period, unless a method has been discovered greatly superior to anything yet put in practice by timber treating engineers. Their great problem is to secure penetrations for the fluids intended to preserve wood. Under pressure of a hundred pounds per square inch of surface a log as small as a railroad tie will not receive oil to its center, under ordinary conditions of treatment. A pressure of a hundred pounds per inch, during four or five hours, may give a penetration of less than one inch. Much depends on the woods. Some are more easily penertated than others.

Dr. Kleinstucck promises to write a book on the subject of coloring woods by his process. If he has accomplished what is claimed he has something valuable, but it is as well to wait a while before becoming excited.

The well balanced business man is the one who keeps the right proportion of horse sense and science in his working mixture.

We profess to learn by mistakes, but it is the other fellow's mistake we prefer to learn by while it is our own that would really teach us the most.

Combined Saw and Veneer Mill

The sawn II with vercer citting aranes added, while not the usual though the latidwood industry, is found so frequently these days that it can maidly be called a resulting or a movelty. Quite is number of the barewood snawn ling protected dering the past few years in the South have included veneer cutting with sawnilling. There are two combinations of this kind made. One is the combination of veneer sawing with sawnilling, and the other is combining rotary veneer cutting with sawnilling.

The first condination of this is not taken up with was that of veneer sawing, and usually the proposition involves working with high-grade oak which will produce good quartered flitches. The teneer saws are used to work these flitches into quartered veneer for face work. There are a few instances where veneer saws have been used in combination with sawinils for making thin lumber, such as eigar box and panel stock from poplar, cottonwood and gum. Usually, though, the more important combinations of veneer saws are used to reduce the finer quartered oak stock to face veneer. Where this idea is carried out the veneer saws really become a part of the sawiill and mark an extending of the work of reducing logs to finer marketable products by the process of sawing.

Some mills in reducing to thin lumber instead of fine thin veneer follow the process of resawing instead of turning to the veneer saws. For example, one may find a hardwood mill equipped with one big mill band saw, one big resaw and further along a smaller or regulation size resaw. Here the big saw cuts flitches thick enough for two boards; these go through the big resaw and those boards which it is desired to resaw again and reduce to thin lumber go through the second resaw. To some extent thes process is taking the place of the former method of making thin lumber by producing heavy flitches on the mill saw and then working them into thin lumber on the veneer saws. The resaw will do much more work in the same length of time.

For the hardwood sawmill working mixed hardwoods, and especially those where considerable quantities of sap or white gum are involved, there comes a combination of veneer cutting with sawmilling in which rotary veneer machines are used. Where the veneer cutting end of the business assumes much magnitude it puts the millman to figuring his sawing on a different basis.

One man talked to recently who was operating a mill in which the veneer cutting department had grown fully as large if not larger than the sawmilling end itself, was lamenting his troubles. He said it was almost impossible to make the sawmill pay a profit when he figured cost as it should be figured.

He had a modern mill with resums to facilitate the work of reducing timber to boards and every convenience for handling both logs and lumber and it looked like he ought to be making lumber about as economically as it is practical to make it.

He explained, however, that his trouble came from the fact that most of his best logs went to the veneer mill and as a result he was operating his sawnill mainly on low-grade logs and the resultant low-grade lumber would not average high enough in price to pay any kind of a profit. In other words, he felt at times that the veneer mill was robbing him of his best sawmill profits, by taking the higher grade logs, especially in gum. His timber consisted of a mixture of hardwood, including gum as an important item. Along with it was oak, ash, some cypress, sycamore and elm.

About the only really high-grade, high-priced lumber that he was able to get from the mill was oak. He was not cutting oak on the veneer machines but cutting box shooks and plain veneer from such woods as gum and sycamore so that he had some fine oak for quartering as well as plain and rough oak, and his main complaint was that his best gum went into the veneer mill and the low-grade gum cut in the sawmill was really cut at a loss because the entire product was low-priced lumber.

He was figuring in this instance from the sawmill standpoint alone, and not taking into consideration the question of whether the rotary

vited name to engineering arms of of the greater be practical for him to get out of them with the sawmill.

Good red gum that shows figure may be worked advantageously in the sawindl, and the chances are the average sawindl man will get more out of high grade red gum in the form of lumber than if ne worked it on a rotary veneer inachine, especially if he were to turn it into plain veneer and hox shooks on the veneer machine. To make the high grade red gum into face veneer and fine stock is a different thing, a thing not usually done with the rotary cutting department of the sawindl. It belongs to the class of veneering known as fine veneering, and is best handled at plants where they specialize in face veneer. There they get more out of it than the sawindl man does, but usually where plain veneer making is done as a side issue or in connection with sawindling the better plan is to work the high grade red gum logs into lumber.

In white gum or gum that runs largely to sap it is a different matter. The sawnill working this class of gum is likely accumulate quite a stock of apper grades and find more trouble in realizing the price that should be had for white and sap gum that runs above No. I common than it will have in finding a market at current prices for the lower grade stock. Here is where the vener mill combination comes in. There is an enormous demand for thin stock in plain wood of this kind for furniture panels, drawer bottoms, for box shooks in single ply and for built up box panels, and it is here that in the modern scheme of things the veneer cutting machine helps out in the proper utilization of timber.

It is a pretty safe bet that in the instance where the millman was complaining that his sawmill department was having a hard time to make money because the veneer mill was taking his best gum logs, if he had taken the returns from the veneer mill in conjunction with those of the sawmill he would have found that the veneer mill was getting more for that high-grade sapwood than he would have been able to get for it cut into lumber. In other words, the final results from the entire plant in the way of net returns were better from this combination than if he had worked the gum and sycamore into lumber.

Another opportunity in atilization furnished by the veneer department was easily apparent from the quantity of blocks or short lengths that were coming in. There were many short blocks, evidently made short originally because the timber was crooked or because good short lengths could be secured between heavy knots and burls along the trunk of the tree and thus there was obtained for the veneer mill lots of timber that would have been left in the woods had the sawmill alone been depended upon for working it up.

This should not be taken, however, as an argument in favor of cutting short blocks voluntarily for the veneer department, for long logs are better and more economical in the veneer mill as well as in the sawmill and ordinarily logs for the veneer mill should be cut as long as it is practical to handle them. The advantage is in the saving of timber and in it being easier to cross-cut them to length with the drag saw of the sawmill than with the hand cross-cut in the woods. Perhaps the greater advantage is in saving timber. Stock cut to block lengths in the woods checks in the ends and three or four or even six inches must be allowed for trimming with the score knives on the veneer machines to get sound stock, whereas if the blocks are freshly cut from the log at the veneer mill this end trimming allowance can be reduced to one-half or even onefourth of what is required when the blocks are cut to length in the woods. The only advantage in the short block idea is the chance it offers to cut out and utilize timber in the woods that will not make the longer logs. This is often quite a decided advantage, however, and the rotary veneer mill enables the loggers to glean many a thousand feet of timber that would otherwise go to waste.

Why buy a machine for ripping lumber and then push the lumber through by hand? Let power do the feeding as well as the driving of ripsaws—it is better, and eventually cheaper.

Uses of Port Orford Cedar

Editor's Note

Satisfy the control of the same place as far back as there is any botanical record, Haron H. Smith, decadrogist of the Field Museum of Natural History, recently as a study of this pen, written for Hardwood Record, deals chiefly with the commercial state of the same place as far back as the result of the same place as far back as there is any botanical record. Huron the but no nurber." There seems to be nothing in the geography geology, situation or climate constituting a barrier against the spread of the species into new areas, yet it never crosses the line set for it by sometimes agency. Such a tree is the Port Orford cedar of the Northwest Pacific coast. It occupies its ground so vigorously that it exhibits most other trees, yet it has remained in the same place as far back as there is any botanical record. Huron H. Smith, dendrologist of the Field Museum of Natural History, recently made a study of this interesting tree in its native home. The following article from his pen, written for Hardwood Record, deals chiefly with the commercial side of this species.

Little has been written in timber journals concerning Port Orford rectar (Chamaceuparis lawsoniana), because the tree has such a limited range as to be endemic. Not a stick of it is found north of Coos bay, southern Oregon, not even on the north shores of that bay. While it ranges as far south as the mouth of the Klamath river in northern California, it is scattering there, and is abundantly found only north of the Rogue river and on the Oregon coast, forming between there and the mouth of the Coquille river a nearly continuous forest belt, twenty miles long.

The wood of this fastidious tree deserves much attention from manufacturers desiring special qualities. Sargent says of the wood that it is light, hard, strong, and very close-grained, abounding in fragrant resin, very durable in contact with the soil, easily worked, and capable of taking a good polish. It is as light as basswood or box elder; harder than western spruce; stronger by a ninth than white oak. It is closer grained than red cedar.

The fragrant resin which the wood contains is far superior to that of any other wood of North America, its nearest kin in odor, and indeed in family, being the Alaska cypress (Chamaecuparis nootkatensis) which grows in the coastal region northward. Its delicious odor, however, when the wood is cut in the mill, is so strong that the mill cannot continue to cut it for longer than five days at a time. It has a strong and injurious effect on the kidneys of some of the workmen, soon incapacitating them for labor.

The wood takes an excellent polish. It is very durable both in the water and in the soil. In the Oregon forest a spruce tree seven and a half feet in diameter

was found growing on the fallen stem of a smaller Port Orford cedar, the roots extending like the claws of a parrot around each side of the log, and locking together underneath. The spruce was at least 400 years old, and the cedar is today as sound as any of the green trees that stood by it. The peculiar specimen was put on exhibition in the forestry building of the Lewis and Clark Exposition at Portland, where it may be seen today.

The aromatic oil seems to preserve this wood from decay. This oil makes it burn very readily, too. The writer, in stopping for dinner out in the country at Coos bay, actually saw the housewife go to the spring for her kindling, take a chunk from under its weight, wipe it off with her apron, and touch a match to a splinter that flamed like a torch.

Vessels built of this wood on Coos bay over forty years ago are still as sound as when launched, and are doing excellent service up and down the Pacific const. The wood is much sought after for construction of speed motor boats. In fact the Smith mill at Marshfield, Orc., is now cutting the timber from this species for Sir Thomas Lipton's next cup challenger. He always has them built of this wood.

The odor of the wood is an absolute safeguard against moths and insects when it is used for closets, presses, and wardrobes. The odor

oresses, and wardrobes. The odor of clothes kept in them is more agreeable and delicate even than that of camphor wood. The only other timber in the world that has a similar character is the hino-ki (Chamacoyparis obtusa), found extensively in Formosa and Japan. It is the sacred tree of Japan, and all Shinto temples in that country are built entirely of it. Most of the lacquer work of the higher type is done on this wood.

Port Orford cedar is cut for commercial purposes by only three or four mills: C. A. Smith of Marshfield, Ore., who cuts it in a special mill; the Randolph Milling Company, near Bandon, Ore.; and the Coquille Milling Company, on the Coquille river in that state. It is worth about eighty dollars a thousand now for carpenter stock, and should not be used for engineering purposes, as it is too rare, and other woods will answer as well for that purpose.

Ranchers and small operators cut a good deal of this choice wood into four-foot bolts, for which they receive about \$28 a thousand feet, though paid by the cord, and ship it to block match factories. About the only important factory left manufacturing these block matches is

PORT ORFORD CEDAR IN ITS NATIVE HOME.

that of Zan Brothers in Portland. The Alaska or block match, called "stinkers" by the loggers, is probably more used on the Pacific coast and in Alaska than any other type of match. It has been in use many years, and in some regions to the practical exclusion of all others.

They are sulphur matches, and will not easily blow out in the wind; and if dropped into the river they can be subsequently dried out with no impairment of their igniting quality.

As the blocks come to the match factory they are cut up into slices the thickness of the match length. One end is cut very smooth, as it is steamed and cut with a razor-like microtone knife. The other end is crumpled and crushed, the fibers being matted together to keep the matches in a block. Then the blocks are put

matches

through an automatic allystel thin stamping knife that cuts the thickness of the match all one way. The second time it is fed at right angles to these cuts, and is a block of matches, all but the igniting end.

The blocks are separated into pieces of a suitable size to be gusped in the hand, and are laid top end down on a hot plate, so that the action of the heat separates each match from every other one. Then Chinese labor is engaged to dip them for about a

Thus we see that
Port Orford cedar is
nearly as valuable on the West Coast as the cocoanut is to the Sand-

Red Gum and Circassian Walnut

Red gum is a plain wood and a figured wood. Much of it has no figure, as the term is commonly used, and some that is figured is used for ordinary purposes where the figure adds nothing to its value. The total annual cut of red gum, including lumber and veneer, is not far short of 750,000,000 feet, board measure. There is no way of determining exactly how much of this is used in a manner to display the figure and how much is used without any purpose of such display; but it is a safe guess that ninety per cent of it either has little figure or that no attempt is made to turn such figure to account.

The annual cut, as given above, is in board feet. That is, the measurements are taken on the basis of boards one inch thick. But about 130,000,000 feet are veneers. If this were stated in surface feet the measurement would be nearer 1,000,000,000 feet, because the sheets of veneer are thin, and several of them must be laid one upon another to equal the thickness of an inch board.

Much of the figured gum is used in the form of veneer, and though it may not amount to ten per cent of the whole cut, it covers a great deal of surface. Figured wood, therefore, is much more in evidence than is indicated when its total quantity is expressed in board measure. One board foot, when converted into veneer, may cover eight or ten surface feet of furniture or interior finish.

Red gum's figure is not primarily due to contrast of annual rings, as is the case with most of the pines, and with such hardwoods as ash and chestnut; nor is it secured by exposing medulary rays, as in quarter-sawed oak, though a certain variety of appearance is secured by quarter-sawing red gum. Its figure is peculiar. It is due to the deposit of chocolate-colored and light red material in the wood. To a certain extent these deposits run at haphazard; that is, they do not follow annual rings or medullary rays, but are dispersed irregularly. On the other hand, certain patterns reoccur at intervals, so that when a large surface of figured wood is examined, it is found that certain pleasing features are repeated in a way to suggest a sort of rule or law.

The name red gum is due to the color of the heartwood. This

color is due to minute grains of pigment in the medullary rays chiefly, though the grains are found in the vertical fibers also. When the sapwood changes to heartwood as the tree advances in age, the coloring matter finds lodgment in the dead material constituting the interior of the tree. This process is common with most woods. The dark color of the interior is caused by deposits of pigment in and among the cells. It does not lodge in the sapwood, for the supposed reason that the circulation of water there is active and washes the substance out; but activities practically cease in the heartwood, and such solid substances as find their way there will remain.

The stains which produce the figure in red gum seem to be different from the coloring matter spoken of, since figure occurs in the sapwood as well as heartwood, while the red which gives the wood its name is in the heartwood only.

In addition to the coloring matter of the heartwood, and the stains which produce the figure, there is a gum present in minute globules in the vertical pores and the medullary rays; but since this gum appears to have little to do with the color or figure, its functions need not be considered here.

There is great difference in the amount of heartwood in different trees. Some have little, others a large proportion. Soil and situation appear to be influential factors. Trees on low, wet ground often contain much more sapwood, in proportion to size of trunk, than trees on dry ground; but this rule is not universal. Old trees have more sapwood than young. This law rules most tree species. It was once believed that if red gum trees were girdled and killed and were left standing a year or more, the quantity of heartwood increased; but that opinion was not well founded and it is no longer held.

Red gum is remarkably free from disease while the tree is alive. Its remarkable immunity has been attributed to the great period that it has been on earth. It flourished on the Pacific coast in Tertiary time—nobody knows how many million years ago. Its survival during such immense periods is attributed to its ability to resist disease, by which process it gradually became immune.

Though the Lying tree resists attack, not much can be claimed for the wood after the tree dies. It is only moderate in its resistance to decay.

The figure and the texture of red gum have made it the most satisfactory substitute in the world for Circassian walnut. Much has been said on the subject and much remains to be said. Per haps the most pointed thing that ought to be said is that the time should speedily come when red gum will stand on its own merits and will not pass as a substitute for anything; but that time has not yet come, and it is appropriate to speak of this wood as it is used at present.

Circassian walnut, for which figured gum is so often a substitute, is an Asiatic wood (Analaus repia). Its original home, as its name indicates, was Circassia, a region of western Caucasus, now included in the Russian government of Kuban and Chernomorsk, lying between the Black sea and Kuban river. In a circular by Sudworth and Mell, of the United States Forest Service, issued January 25, 1913, it is stated that Circassian walnut's range extends eastward to northern India and northern Burma. It has been widely extended by planting, which began in Europe before the Christian era, and may have been as early in India and China. This is the tree which bears the nuts of commerce known as English, French and Italian walnuts. They all come from the same tree, though it is known by different names.

The Circassian walnut wood that reaches this country comes from Circassia, and to a less extent from northern India. The planted trees of Europe furnish wood of a lower grade, and little of it reaches the United States, and when it is sold to European manufacturers it is not called Circassian, but English, French, Italian, or Austrian walnut.

There is not enough Circassian walnut to meet the demand, even at the high price asked for it. It is brought at great expense from the mountains where it grows. When it reaches scaports or railroad stations it sells by the ton at prices averaging about \$160 a thousand feet, log scale. Freight and middle men's profits add much to this before it gets to the consumer.

The quantity reaching the United States is not definitely known, because it is imported simply as "cabinet wood" and is not reported separately; but the Forest Service has published such statistics of manufacture as have been compiled, from which it is estimated that approximately 2,000,000 feet of Circassian walnut reach the United States yearly.

A tour of observation among large furniture stores in any American city will show much Circassian wahut, or what pretends to be, in evidence. It is the same in New York, New Orleans, Chicago, and all over the country. A little figuring will show that 2,000,000 feet a year is totally inadequate to make all the "Circassian" furniture that is being sold. In addition to furniture, large quantities are demanded for interior house and office finish, fixtures for stores, banks, saloons and offices, church fittings, and musical instruments. To make all of these commodities, the 2,000,000,feet of Circassian walnut a year must suffice, or substitutes must be used.

There can be only one conclusion: much that passes as Circassian walnut is something else, and that "something else" is in most cases red gum.

The imitation is so exact in figure and color that it will tax the knowledge of most people to tell the true from the false. This applies not only to the ordinary purchaser who buys a bureau or finish for an office, but it applies in many cases to the dealer. Sudworth and Mell say in the circular already referred to: "Although it is easy for expert buyers to recognize true Circassian walnut logs, it is often difficult to distinguish the wood from some of its substitutes when they have been skilfully stained and finished. Chief among the woods which resemble Circassian walnut in general appearance is the so-called satin walnut, tassel wood, or red gum of the United States, the wood of which has been sold as Circassian walnut, both for furniture and for interior finish. The wood from butt logs of red gum is often handsomely veined and mottled, and is strikingly similar in general appearance to Circassian walnut."

Experts have worked out keys and explanations to assist in detecting red gum when used as an imitation of Circassian walnut. The keys are adequate in the hands of an expert who understands the structure of woods and can use a microscope; but to any one else the keys are of little use because too difficult for ordinary use. The arrangement and size of the pores of the two woods are much alike. They are so nearly the same that it is doubtful if that test alone can be relied on to distinguish one wood from the other. The color alone is equally unreliable as a means of identification, after the finisher has been at work. There is a difference in luster sometimes the difference is in favor of the walnut and sometimes of the gum. The only feature in which the walnut is always superior to the gum, as far as figure is concerned, is in the burls and the crotch wood. No imitation, except the work of the brush, can make gum look like walnut in that particular.

The two woods are thus brought together in a wide and useful field. The one has been a prince among eastern woods for two thousand years; the other was, until recently, a mere plebeian among western woods; but now they have come into competition that was not made possible by the eastern wood descending from its high place, but by the western wood rising to the level of its princely rival.

Memphis Logging Conditions Not Promising

There has been favorable weather throughout the greater portion of the Memphis territory during the past fortnight and good progress is reported with logging work. There are complaints that the amount of timber prepared for shipment in the delta proper along the entire line of the Yazoo and Mississippi Valley road has been smaller than usual. This raises the question as to whether or not there will be an adequate supply of logs for the winter because the proportion of log receipts at Memphis coming from the Yazoo & Mississippi Valley line is unusually heavy. Every effort is being made to take advantage of present favorable conditions and to prepare as much timber as possible for later use. Whether or not these efforts will be successful depends largely upon the character of weather for the next few weeks. Winter is already at hand and doubt is expressed as to whether or not it will be possible to make much further headway.

Owing to the very heavy movement of cotton to Memphis over the Illinois Central and Yazoo & Mississippi Valley lines, as well as over the other roads entering this city, receipts of timber by rail have been somewhat smaller than during October. This development was to be expected, however, as the maximum movement of cotton always precludes prompt handling of other traffic, including lumber and logs. It is fortunate for lumber interests that, with the lull in rail receipts, there has been a rather decided increase in the amount of timber brought to this city by water. The stage of the Mississippi and its tributaries has been decidedly more satisfactory during the past fortnight and a great deal of timber heretofore unavailable has been brought out. It has likewise been fortunate that the big movement of logs to Memphis during October left the mills well supplied for the present, with the result that there has been practically no stoppage of manufacturing operations here as a result of the decrease in timber receipts.

Car Statistics

The regular report of the American Railway Association on car surpluses and shortages shows that on December 1, 1913, the total surplus was 67,466 cars, as against the surplus of 46,059 on November 15. The sur_lus on November 30, 1912, was 26,135.

The total shortage on December 1 of this year was 10,212, as against the total shortage on November 15 of 23,407. The shortage on November 30, 1912, was 62,536. From these figures it can readily be seen that combined with greater attention to the matter of taking care of shipments, the slackening up in trade is being felt by the railroads.

The Russian Veneer Industry

Editor's Note

He following as paper read on December to a time the inserting of the S Association (so dut the Anditorium hotel, Clauge by Hernik (terrette e.e. k many stemes) of the most interesting and valuable papers that tax in the very wear to be reading on the part observed into estimate that tax is states. to T Ven er & Pen Manus er Kons - Locak Lumand Lass a fra to de dote this association to the industry of the English

The witter has been at the Little States since the beginning of this year, to stidy the veneer industry, and especially the difference between the methods and much very employed here and in Russia, and has book ropested by one of the honored members of the National Veneer & Panel Manufacturers' Association to furnish, on this occasion, a short account of Russian veneer manufacture, Being under many obligations for the courtesy and great attention that have been bestowed on me during my visit in American veneer factories, I have not wanted to refuse complying with the request, but am glad if I can in this way reciprocate in a small measure for the great favors extended to me. I wish, however, to state right in the beginning that I am not an expert in any way on the Russian veneer industry, although I am somewhat acquainted with it

In order to give the clearest possible picture of this industry, as far as is in my power, I will furnish first a brief account of the manufacture itself, from beginning to end, and then make a small comparison between that method and the one employed in the United

States in those points where they deviate from each other and can be compared, and will then give some figures in regard to the size of the production in an average factory, number of machines used, number of employes and finally the cost of production.

The logs are cut from December to March and transported to the factory in winter by rail, but in summer often by water, being made to float along with logs coming from lighter trees, to keep them from sinking. The logs are earefully stored away at the factories and are kept in water-basins during the warmer season. This prevents splitting and change in color, and the logs are therefore, when work on them begins, quite as fresh as if they had just been cut.

Immediately before cutting, the logs are steamed under pressure for about six hours. This steaming must be done with much care. The pressure rises slowly from 0 to 15 pounds per square inch. All condensation must be drained from the boilers so the logs do not lie in the water. This is very important. After the steaming the logs are carried as quickly as possible to the veneer-lathe.

Then follows the most important process after cutting: Glue spreading and drying. This is somewhat different in different factories. In most of them the veneer is carried direct from the veneerlathe to the glue spreaders. Some factories, however, will first pass the veneer through a so-called wringer, to squeeze out a part of the water through the pressure. This tends to reduce considerably the time of the actual drying process. This operation will often remove from twenty-five per cent to forty per cent water, hence it is easy to see that the expense of the drying is reduced to quite an extent. Some factories now use even a hot air drying machine for this purpose. The main thing is, however, that this pre-drying-where it is done-is never a complete drying, but has for its purpose only a somewhat lower presence of water in the veneer; hence, practically speaking, it is still in a wet condition when it reaches the glue-rollers.

When the wet veneer goes through the glue rollers it imbibes not only the glue itself, but at the same time the materials that make it waterproof. The glue covered veneer comes then into the so-called glue press, where it is submitted to a high pressure between steam .heated plates. In this press, where the veneer is held a longer or

HENRIK CRONSTROM, KAUKUS FABRIK.

shorter time, depending upon its thickness, the logs is removed. From this press the press where it dries off and cools off quite

When a veneer for export is to be produced, without special designation of its purpose, the only thing still to do is to cut the veneer into the desired sizes, which is done in a so-called clipper for sizing, and to earry it through a scraper, whereupon it is ready for export.

With several factories, however, a part of the veneer is treated somewhat further, by sawing it into ready plates for tea boxes, chocolate, ash trays, etc. In these cases the appearance of the veneer is often changed by letting it go through coloring machines, imitation machines, smoothing machines, etc.

This is the general way of manufacture told as briefly as possible.

If we now want to make a comparison between this method and the one employed in the United States we have to remember that in an ordinary factory in Russia, there is worked in the main only birch and alder three-

ply veneer of a thickness of 4, 5 and 6 millimeters, that is about 5/32". 6/32" and 7/32", while most factories here send out a highly finished product for different purposes. A comparison, if it can be made at all, must limit itself therefore to certain leading features of the

Moreover, the writer wishes to call the attention of his audience to the fact that his knowledge of the American veneer industry was gathered during the visits that he has had occasion to make to factories in this country, and it cannot therefore be complete. Hence, it is quite clear that he will be guilty of errors in the following, for which he wishes to apologize beforehand:

First, as to the way in which the logs are kept in storage at the factories, the writer thinks he has noticed that in most factories in this country the logs are kept all the year round on dry ground, while most Russian factories keep the logs in water-basins or tanks during the warm season. The former method is without doubt a disadvantage to the American factories. In spring, when the sap begins to rise in a growing tree, the same thing will happen also in a freshly cut stem. This causes a change of color in the wood, and makes it brittle, and this is especially the case with the birch tree. In fact as the logs are kept longer on dry ground, they will deteriorate in other ways-by cracking, etc. As is known, a fresh stem can be kept in water almost an indefinite time without any great change.

We now come to what is perhaps the most important difference between the two methods-the boiling, cooking or steaming of the logs. The American factories cook the logs for twelve to twenty-four hours in open water reservoirs or tanks. The Russians steam the logs for six hours in closed boilers under pressure. The purpose of the steaming is, of course, to render the logs sufficiently soft and tough for cutting. This purpose is attained in both methods; perhaps the wood gets a little softer through cooking in water. But is something else not likely to take place with this steaming? We shall see. In steaming according to the American method, the logs will take up in themselves more water, so that they will contain practically a higher proportion of water than will some fresh lumber that is treated in the Russian style. All this water will then have to be evaporated

by norms of the drying process. How does this compare with the Russian style? Through the stewing in steam, under pressure, a large amount of the water is driven out of the log; the higher the pressure which is used, the more water is removed. Still, the pressure should not be raised to more than fifteen pounds, for otherwise the wood will get too dry. There is, therefore, in this method less water left to be evaporated, following our drying. But something else will happen when this steaming under pressure is used, that is, the sap cells of the wood are caused to burst, the pores are opened, and the largest part of the sap and foreign matter which is locked up in the pores is driven out.

As before stated, this steaming must be done with care, the pressure being increased slowly. An increased pressure from the start would destroy the structure of the wood. The main thing is to obtain from the process a product that is soft enough for cutting, with open pores, free from sap and containing less water than before damping.

A gentleman in the United States, who is thoroughly acquainted with the veneer industry, told the writer that he has met with trouble in attempting to dry maple veneer in a drying-machine with steamheated plates. The difficulty consisted in that from the interior of the wood a sap came oozing, which stayed on the outside and formed a sticky mass. He then tried to steam maple logs without pressure, before the cutting. The result was that the drying in the platedryer could be undertaken. What can we learn from this practical example? In the first place, that though steaming in water a large, even perhaps the largest part of the sap remains in the wood. In the second place, how easily the sap can be driven out by contriving a pressure in the cells inside, for there, as in this example, a wet veneer strip is placed between two hot plates; where the temperature is over 212 degrees, the water which is in the wood changes direct into steam, and a pressure results, which drives out the sap. In the third place we see from this example that even through steaming without the least pressure, a part of the sap can be withdrawn. Still, steaming without pressure carries with it one disadvantage that each veneer man has experienced, namely-that the steaming does not work evenly through the whole mass of the wood.

But why is it that the removal of the sap is such an important matter? Because, in the first place, as everybody knows, sugar sap, resin, and similar substances, are extremely hostile to every glueing. We cannot glue together maple veneer, when the exterior is covered with a coat of sticky sap. In the second place, getting rid of the sap plays undoubtedly a considerable part in producing waterproof veneer, as we shall see farther on.

As far as the cutting itself is concerned, that is done in Russia in the same way as here, and with machinery about the same; still there is a little difference. Sometimes a lathe with a movable knife is used, that is, the knife moves forward and backward parallel with the cutting edge. As we know, it is easier to cut wood when the cutting edge moves in the direction toward the fibers of the wood. Moreover, a smoother cut is obtained. In fact, this is a principle which has come to be employed with almost all woodworking machines. A veneer-slicer is known to be built on the same principle. Why then should this principle not also be followed in a veneer lathe? It is true that the machine gets more complicated, but it should be remembered that such a machine need not be used for rough center work stock, but rather for the best face veneer. Moreover, the knife in such a lathe retains its sharpness quite a while.

As to the drying and glueing, which then follows, the main difference consists in this, that according to the American method the veneer is first dried and then glued, while the Russian process is just the opposite. We shall see farther on what can happen in the two instances. When the drying is done in the American way, the pores in the wood are closed more or less, the surface becomes sometimes somewhat case-hardened; at other times, glossy. When this veneer passes through the glue-spreaders, the main part of the glue stays on the surface. A small part crowds into the wood, as the moisture of the glue opens the pores somewhat. What happens when the Russian method is followed? When the wet or only slightly dried veneer goes through the glue spreaders, the pores are open, and not alone

this, but are also free from sap. The waterproof glue penetrates into the pores and is absorbed by them.

When this veneer is then placed under high pressure between steam heated plates, the glue is pressed very strongly into the pores. In this way even the larger portion of the water which enters the wood and glue turns into steam and goes off at the same time, carrying with itself part of the glue, whereby the pores are filled even more. Inasmuch as the external strata in three-ply are usually very thin, it will be seen that these are almost entirely impregnated.

It might be thought that this process works slowly and is expensive. The fact is that it is slower than the American process, but there is still another circumstance which should be taken into account. First, we see that while the American veneer contains perhaps forty per cent to fifty per cent water before the drying, the Russian contains not much more than half this amount. There is therefore so much less water to be evaporated. If we, however, study the principle of the drying itself closely, we find that two entirely different principles come into play. Without further going into details on this matter, it might only be stated that according to the principles employed in the American plan, a sufficiently large heat is applied to the wood-such an amount as will cause the entering water to pass into water vapor, then the air is heated sufficiently to be able to take up this moisture and finally this moist air is gotten rid of in a mechanical way by blowers, etc., which requires power. Another principle for the drying is that to convert the water which passes into the wood into steam direct. For this purpose no air is needed. It is this principle that is employed in the Russian method.

It would lead us entirely too far to show here in detail which method takes more steam. One fact is while the Russian factories get along with only about half the amount of steam that is employed by the American ones, still they employ more steam at the time of steaming the logs. Moreover, there are obtained in Europe at least two glue presses with steam heated plates for the same prices as are paid here for a blower dryer. Everything being normal, the capacity, with glue presses of this kind, is about 180 cubic feet for ten hours, or if we take for example 5/32 3-ply = 13,500 square feet. If any one should want to characterize in a short, perhaps somewhat exaggerated way, the difference between the American 3-ply and the Russian waterproof 3-ply, this could be done, according to the writer's opinion, perhaps in the following manner: The American 3-ply consists of three strata of wood glued together and the glue which is between the strata has entered only to a small extent into the wood itself, the pores of which are partly filled with dried or solidified sap, hence the moisture is easily absorbed through the outer stratum and dissolves the glue. The wood fibre or the skeleton itself of the wood is, as will be noticed, not materially attacked by the moisture, but it is the pores that imbibe the water, which causes the wood to swell, destroying the glueing and breaking apart the wood itself.

Russian 3-ply on the other hand consists of three strata of veneer glued together, and the waterproof glue which is employed is to a large extent driven into the pores of the wood which are empty and free from foreign matter so that the whole face of the wood is made waterproof. It is clear without further explanation that 3-ply must become much more capable of withstanding the moisture.

If the American veneer would be glued with waterproof glue one would obtain, of course, a more or less waterproof product, but this would still be not of the same kind as the Russian, because the wood itself would continually be susceptible to moisture.

It might still be said that every Russian veneer factory has a well-equipped laboratory for the examination of glue, etc. The writer has not noticed anything of the kind in the American factories.

A Russian factory of middle size is built for about 210,000 cubic feet of veneer per year. This is about a carload of twelve tons a day. Of this there are only about 10,000 cubic feet unglued in different thicknesses. The material is divided about as follows:

				Sq. 11.
4 mm. = 5 32"	5000 of all glued	veneer	= 100,000	= 7,500,000
5 mm. = 6 32" -	30% of all glued	veneer	=60,000	= 3,600,000
6 mm. = 7 32" =	15% of all glued	vencer	= 30.000	= 1.500,000
Thicker	50 of all glued	vencer	= 10,000	= 330,000
Unglued different	thicknesses		10,000	= 600,000
fD - 4 = 1			010 000	12 520 000

Of every thickness there are arout sixty per cent first quality and forty per cent second quality goods. To make up this production the following number of machines are employed:

5 bothers for the straining of the [28] 3 to 4 lathes, do pending upon the Urcki sscor logs 4 to 4 clippers 2 glue spreaders 2 glue presses 4 dry presses 2 stock cutting machines 1 to 2 scrapers

The number of employes in such a factory is about 70 men, or for two shifts, 140. In case of part of the veneer being worked thoroughly there is to be added one betmachine (coloring machine), one smoothing machine, one imitation machine, five or six circle saws. These require for two shifts 30 men. The total crew employed in this way is about 170 men.

To obtain an idea about the cost of production in such a factory the total expense for the main operation is divided over the whole

number of cubic feet of finished veneer. In the United States all calculations are based on square feet, hence the expense has also been reduced to this basis, but we should remember that these figures can not be absolutely correct, but are only an average because the cost of production, of course, is somewhat different with different sizes. The following figures are not gotten up in a theoretical way, but are taken from results obtained in practice.

Cost of production is as follows:

		Average periodo fi	1 - 1 - 4 - 11
Wood		331 GOs	0.496
Labor		135 000	0.2054
Glue		12.60c	0.1986
Administration, interests insura-	nce, un-keen	19.83c	0.311a
Freight to England		9.10e	0.1396
Total		86.10c	1.01496
Market price about		81.04	1.627
F131 1 1 11 11 11 11 11 11 11 11 11 11 11			

The market differs of course, but depends upon the preceding figures and on an average a profit of .278c per square foot may be added.

Annual of Veneer and Panel Men

The eighth annual meeting of the National Veneer & Panel Manu facturers' Association was held at the Auditorium hotel, Chicago, on Tuesday and Wednesday, December 9 and 10. The regular business session, election of officers and banquet took place on December 9.

Following the routine opening of the meeting, President Jarrell read a very able paper. The paper is printed in full as follows:

Address of President

Address of President

I have now been your official head for two years, and I am gratified to say that our members have been toyal to the organization during that time, and that while the membership has not increased to the extent I had hoped, general conditions of the organization are now more stable than ever before. Under the able leadership of their chairman, the various clubs affiliated with our organization are in a healthier and more compact condition than formerly, and during the past year some of the clubs have practically doubled in membership, and there are more vener and panel mills today interested in associational work than at any time in the history of the organization.

The able addresses delivered at our various former conventions on practical subjects vital to the interests of every manufacturer have hed much cause of many good hard dollars being placed in the pockets of those of our members who profited by the information secured from those addresses. I feel that it is a distinct loss to any manufacturer who fails to take advantage of the opportunity of attending our meetings, and, as one of the most profitable programs has been prepared for our defincation and instruction at this time, no one should permit himself to miss hearing any of the addresses.

During the time I have served you as president. I have given much of my time, and the best thought of which I was capable, to the work, and, with your other officers, have endeavored to evolve some work and our meetings, but with mediocre success. I have observed that it is an easy matter to secure the active support of practically every representative of any manufacturing concern who attends any of our sessions; in fact, I believe that seeing and hearing what is done here will convert to our way of thinking, the most obdurate, anti-associational manufacturer in the country, and I give fair warning to anyone who doubts this statement, that he had better stay away from our association in its convenient to the process of the control of the proce

our way of thinking, the most obdurate, anti-associational manufacturer in the country, and I give fair warning to anyone who doubts this statement, that he had better stay away from our sessions if he does not want to Join us.

Join us. The most said before, the work of our association in its conventions is educational, and the program committee has endeavored to have every problem that confronts manufacturers, from the felling of the trees to the completed veneers and panels, covered by experts in their respective lines, in such a way as to cause our members to learn how production can be increased, quality of output improved, and cost of manufacture lessened. You who have been regular attendants of the sessions in the past know how middlesses we been to you individually.

I sometimes think we should endeavor to stray from the beaten path that was made by the officers and directors in the past, into new and untried methods, but after more mature deliberation I have reached the conclusion that we are attaining quite as much success along the lines that have been followed heretofore, as could be hoped for, under existing conditions, and that the thing for us to do is to confinue our efforts and pour factory work and just to the extent of the energy, effort and thought we put in our work here, will our efforts be successful. It is a well-known fact that quite a good many manufacturer, and the great variation in prices is appailing. It is gratifying to note, however, the number of such manufacturers is decreasing, and will continue to extent that our association can secure their competitors of the extent that our association can secure their competitors of the depression arrive, and we find it will probably be necessary for the output to be reduced somewhat, we feel an almost uncontrollable entered the configuration of the prices, even down to cost of production, rather than manufacturer, with an established reputation, can rob innocent brother competitors of trade they have worked long and hard to establish by q

put to be regulated by the demand rather than for it to be continued at the highest notch, and the prices regulated by the output.

There is another factor that I believe is to a certain extent responsible for this condition, and that is salesmanship—or rather lack of salesmansh

but as individuals. We all would like to be philanthropists, and, like the poor, we have country ronds aiways with us, all of which roads are more or less abominable. The assistance we give in this work is philanthropists, and the proposed of the proposed blanks and the proposed of the proposed proposed of the proposed proposed of the proposed proposed proposed of the proposed proposed of the proposed proposed proposed of the proposed proposed of the proposed proposed of the proposed proposed proposed of the proposed propo

deliberations

Secretary E. H. Defebaugh then reported orally. The gist of his suggestion was that it is up to the members to maintain the high standing of the organization and to keep it on a footing which will result in great benefit to them. He also stated that it is logical that an organization that has given them really material benefit in its present state of development can be of increasing help with increased development of its efficiency.

Secretary Defebaugh then read the report of the treasurer which showed a favorable balance on hand,

President Jarrell then appointed the various standing committees. Next in the order of business was a paper by Z. Clark Thwing of the Grand Rapids Veneer Works, Grand Rapids, Mich., on "Scientific Drying." Mr. Thwing was not present and had not submitted the paper.

The president then called upon J. B. B. Stryker of the Perkins Glue Company, Lansdale, Pa. Mr. Stryker read a very interesting paper on "Comparison of Veneer and Panel Factories at Home and Abroad." This paper was based on first-hand information that Mr. Stryker secured on a recent trip he made through the Continent, introducing Perkins glue. The paper will be carried in full in the December 25 issue of HARDWOOD RECORD.

Replying to a question, Mr. Stryker said that the mills of France and Germany are gradually going into the manufacture of veneers and panels for the trade. He also stated that in England the veneer and panel plants are not particularly progressive, and that he considered that to be an excellent opportunity for marketing American products in the event that import regulations and freight charges are favorable.

Stanley L. Wolfe of the United States Forest Service spoke to the members on "Utilization of Waste in Veneer and Panel Factories." Mr. Wolfe has recently been assigned by the United States Forest Service to a study of this question pertaining to the veneer and panel industry, under direct supervision of the recently inaugurated office of industrial investigation.

Mr. Wolfe said that he has been working on this for several months, but does not consider that he has sufficient data compiled to warrant his making very definite assertions regarding conditions of waste in connection with the veneer and panel plants. He, however, made some very interesting suggestions that were well received by those in attendance. He outlined the classes of waste as he has found them in his investigation, which come through inefficient handling and methods of waste of material. He stated that waste through inefficiency increases waste in material. He also said that the most difficult part of his research is to determine definitely whether a certain feature that apparently constitutes waste material is really a waste or is rather an economical handling of offal.

a connection with the rotary process he M. Wolfe state. found it difficult to arrive at definite conclusions in his investigation, but that the sawing and slicing methods offer simpler conditions.

He said that his investigations had convinced him that the greatest waste usually accompanies a sawing operation; that he estimates the waste in rotary work to be from twenty to fifty per cent, while the waste in the sawing is from forty to fifty per cent.

Mr. Wolfe made a suggestion that was well taken by those in attendance, to the effect that logs should be piled to prevent rapid seasoning, and that log yards should be kept absolutely free from decaying bark and other refuse, as the spores from fungus decay are rapidly carried from such decaying material to sound logs, which are in turn migred. He said that the log pond is the best preventive of rotting.

Mr. Wolfe then went on to make specific suggestions as to utilization of small waste pieces in various kinds of vencers, but inasmuch as it has never been determined whether or not the utilization of such pieces in this way would return a profit over the extra cost of handling, his suggestions are not here given.

He made some interesting suggestions regarding competitive fuel value of wood waste and coal which indicate that, considering this waste on the value of the original log, the same fuel value cannot be gotten from the money value represented as can be secured from the same money value of coal.

The session then adjourned for a buffet luncheon which was served in the convention hall.

The afternoon session was opened with a short talk by Charles F. Hatfield, secretary of the San Francisco-Panama Exposition, Mr. Hatfield outlined the work going on in preparation of the exposition and told of plans for accommodating visitors. He said that the actual construction on the 900 acres would represent an \$80,000,000 investment

James L. Foord, chief inspector of the Hartford Steam Boiler Inspection and Insurance Company of Chicago, then gave a talk on boiler explosions and their causes, which talk was fully illustrated with stereopticon slides illustrating various explosions, showing in some cases photographs of features which caused them. Mr. Foord advocated the use of wrought iron in boiler work instead of cast iron. He also strongly recommended the use of a butt-strap boiler instead of the lap-seam boiler and strongly deprecated the use of continuous seam boilers.

Howard S. Young, assistant secretary of the association, was asked by President Jarrell to give a talk on the history of the organization. He read a very entertaining paper outlining the past accomplishments and showing the development that has led up to the present efficient organization.

He specially emphasized the fact that the general organization is really the father of the clubs, and that therefore the members of the clubs should all recognize the debt they owe to the general association and should not besitate to join its ranks. He emphasized the possibility of getting specific benefits through close attendance at the association meetings.

President Jarrell then gave an instance of the monetary benefit which his company has received from the reading of a paper on insurance presented at the last meeting. He said that his company has contracted for a sprinkler system which has decreased its insurance rate by eighty per cent, which decrease he figures will pay for all past and future expenses, and then leave a good margin of profit.

B. W. Lord, who at the last meeting was elected delegate to the Chamber of Commerce of the United States, talked vigorously of the wide scope of this organization's activities. He said it was absolutely not a lobbying proposition, but purely an institution acting as the business man's mouthpiece at Washington.

Henrik Cronstrom of Kaukus Fabrik, Finland, read an interesting and highly instructive talk on the Russian veneer industry, which is printed in full in another section of this issue of Hardwood Record.

D. E. Kline reported for the special committee on measurement and inspection of veneer logs. Mr. Kline confessed that this committee is very much up in the air as to just how to proceed, as it is a difficult thing to determine specifically just what a veneer log is in the first place, and on the other hand there is such a variety of informafor and special requirements on the training fortiers the association, that it is profit to a possible to arrive it exists definite or valuable conclusion.

President Jarnel then is on to invests of the varie's started committees, but only the membership committee was ready to report at the regular session. This committee reported seven new applications for membership as follows: Merrill Veneer Company, Merrill, Wis.; Carolina Vencer Company, Biltmore, N. C.; Central Vencer Company, Huntington, W. Va.; Carrom Archarena Company, Ludington, Mich.; R. S. Bacon Vencer Company, Chicago, Ill.; Warren Veneer & Panel Company, Warren, Pa.; Spring Valley Spoke, Stave and Heading Company, Spring Valley, Wis.

The meeting, which was attended by about sixty veneer and panel men, then adjourned.

A sumptious dinner was served in one of the club rooms of the hotel at 6:30, there being a full attendance. Before the dinner was started President Jarrel called for reports of committees, which were not submitted at the regular session.

For the constitution and by laws, on matter B. W. Lord offered a

resolution to the effect that the executive committee hold meetings at least every sixty days. The committee reported that it is its behef

Service, and D. P. H. Berte, and C. Carles, Assistance and C. Service, and D. P. H. Berte, and S. H. M. Lee, and Differences and D. L. Charles, and D. P. L. Kille, R. C. Perakta, S. R. Anderson, 1990, 1

The association then decided to continue its membership in the Chamber of Commerce of the United States, and reappointed B. W.

The Mail Bag

B 613-Seeks Canary Wood

Philadelphia, P. Nov. 22 Editor Hyanwood Riconn. Can you tid me where I can get can rry wood in the begoind in by" boards;

The above has been advised that "canary wood" is the term quite frequently applied to vellow poplar or whitewood, and is the only wood bearing this name I know anything about. He has been supplied with a brief list of producers of poplar .-FRITOR

B 614-Seeks Water Elm Logs

Knoxville, fenn., Dec. 1. Editor Hyanwood Ricord: I wish to make a contract with a reliable firm for 10,000 feet of water elm logs per day for a period of five years. I would like to have quotations based on F. O. B. price. Best of reference as to financial standing is supplied.

Anyone interested in marketing water elm logs can have the address of above correspondent on application .- Editor.

B 615-Seeks Broom Handle Blanks and Machinery

Aurora, Ind., Dec. 6. Editor HARDWOOD RECORD: Will you be kind enough to send us the names of a few parties who furnish blanks for broom handles in large quantities. Also should like to have the addresses of one or two broom handle machinery manufacturers,

The above inquirer has been supplied with a brief list of manufacturers of broom handle blanks, and manufacturers of broom handle machinery. Any others interested can have the address on application .- EDITOR.

B 616-Seeks Commission Salesman in the East

Birmingham, Ala., Dec. 5. Editor Hardwood Record: We will be glad to have you give us the names of reliable hardwood commission men in Boston, Baltimore and New York City. We manufacture large quantities of poplar, especially 6/4 thicknesses.

The writer of the above correspondence has been given a brief list of competent commission men in the territory mentioned. Any others interested in the inquiry can have the address on application .- EDITOR.

B 617-Seeks Trip Log Car Stakes

Phillips, Wis., Dec. 3. -Editor Hardwood Record: Can you give me the names and addresses of firms manufacturing either patented trip log car stakes or the chainless log car stakes? I desire to get in communication with the manufacturers and satisfy myself as to the best appliance

The above correspondent has been supplied with names of one or two manufacturers of patented log car stakes. Any others interested can have the address on application .- Editor.

B 618-Complains of Work of Inspectors

Columbus, O., Nov. 29,-Editor Hardwood Record: Your page 25 item in regard "Do inspectors know the rules," is timely and touches lightly the boldest leak in the hardwood game today. The writer sells around one hundred carloads per month of standard hardwoods, and sees many

so-called "surveys" by mill inspectors. It's nothing to find fifty per cent of a car off what invoice and mill inspector's tally call for. They slop over both ways and get complaints on the below grade, and no mention of

The writer just returned from Pennsylvania, where he had a complaint report on a car of 5 4 No. 1 common, which report showed it to contain 346 feet No. 3 common, 1,694 feet No. 2 common. Upon reinspection be found more No. 3 and No. 2 than reported and around 2,000 firsts and seconds. Not fifty per cent of mill inspectors can throw ninety of the boards into rules the association books specify, nor can they go through same car log run and come within ten per cent variation of themselves on grades. Incompetent inspection costs lumber manufacturers and consumers on an average 81 to 82 per thousand on their whole cut, out few of them know it

The foregoing communication comes from a thoroughly experienced and reliable hardwood jobber, and is published without comment.—Editor.

B 619-Seeks Three Inch White Ash

New York, N. Y., Nov. 29.—Editor Hardwood Record: Can you put us in touch with any mills in Michigan or Wisconsin who can take care of an order for 3" arsts and seconds white ash?

- LUMBER COMPANY.

The foregoing inquiry is from a leading New York jobbing house, and the writer has been advised that there is comparatively little 3" white ash produced in Michigan and Wisconsin at present. He has been referred to two or three possible sources of supply in that region, and has also been given a list of southern manufacturers of white ash who very likely can take care of the order. Any others interested in the inquiry can have the address on application .- EDITOR.

B 620-Seeks Plain and Quartered Thin White Oak

Detroit, Mich., Nov. 29 .- Editor Hardwood Record: We are in the market for a considerable quantity of 3 8 and 7 16 No. 2 common and better in plain white and quartered white oak. We shall be glad to have quotations on a considerable quantity of this material, each grade separately priced.

- LUMBER COMPANY.

The above inquiry is from a foremost Detroit house. Anyone interested in supplying this concern's wants can have the address on application .- EDITOR.

B 622-Seeks Quartered Sycamore

Philadelphia, Pa., Nov. 24 .- Editor Hardwood Record: Can you inform us where we can procure 5/8 quartered sycamore No. 1 common and better in carload lots?

The above inquiry is from a leading Philadelphia manufacturing house. Anvone who can supply this wood is invited to communicate with HARDWOOD RECORD so that his address can be supplied to the inquirer.-Editor.

B 623-A Correction

HARDWOOD RECORD submits the following self-explanatory letter:

Cincinnati, O., Dec. 3.-Editor Hardwood Record: I notice in the New York news of your issue of November 25 you state that the forfeiture case of the government vs. The Maley, Thompson & Moffett Company on the seizure of mahogany lumber in 1909 was decided in favor of the government.

This is not true. The facts in the case are that the evidence was submitted in the Federal court in Brooklyn by both the government and to detect at such that see the days very little evidence that the edge took the case trem the piece and doubled in favor of The Maley, Theng on a Modett Company of tope you will correct this error in your next lessue.

The amount of lumber involved in this case was something like 30,000 feet and the derendants admitted from the very beginning that there was about 800 feet that was up grade, which of course, was entirely due to the difference in judgment of the inspectors. I wish to state that not only this case was won and taken from the jury, but a previous case of a similar nature was won some two years ago before a New York Federal judge, in which case the judge instructed the jury after the evidence was in that in the event they found for the government, he would be compelled to set the judgment aside on account of the fact that the evidence did not justify such a decision.

THE MALLY, THOMPSON & MOPPLET COMPANY, E. W. Robbins

B 624-Wants Three-Ply Maple and Birch

Herkimer, N.A., Dec. 2. Editor Hamwoon Recome. Will you kindly send us the names of some maintacturers of built up veneer, who make Robly maple and birch? We use about 200,000 feet a year.

This concern has been given the names of several companies which turn out this line of goods, and others interested can have the name and address on application to this office. -Editor.

Clubs and Associations

Northern Loggers Hold Session

The first general meeting of the logging superintendents of Wisconsin and northern Michigan ever held convened at Green Bay on Saturday, December 6, with an attendance of more than seventy. The meeting was the outcome of a brief discussion of logging methods and camp management which took place at the quarterly meeting of the Northern Hemlock and Hardwood Manufacturers' Association at Eau Claire, Wis., October 29. In his opening address President Hamar of that association gave a very interesting and instructive resume of logging methods in the North. Speaking of costs of logging, he offered figures for a set of camps compiled for 1892-3, showing an average cost of eighteen cents per day per man for food. He stated that it now costs the average lumberman double this amount. Mr. Hamar said that he believed the conditions of those earlier periods are gone forever and that the present day loggers of the North must face new conditions.

He stated that the two most serious problems are increasing cost of labor and increasing cost of feeding men. He stated that increase in cost of supplies is here to stay, but that cost of labor can be reduced by increasing its efficiency through the employment of cost sheets, daily reports of logs sawed and skidded. He said that every camp with eight or more saw gangs should have a saw boss who will not only increase the work but save timber. He said that it is common to find fourteen and sixteen foot shaky butt hemlock logs that should have been long butted or cut twenty feet so that when the shake is cut off in the mill there will still remain sound sixteen foot lumber instead of short stuff. He said that hardwood is frequently cut sixteen feet where eighteen foot logs would save two feet of timber and clean the trees up to the crotch.

Mr. Hamar also suggested that a camp of the same size should have a barn boss whose sole duty it would be to supervise the feeding and general care of the horses.

Regarding methods of logging Mr. Hamar said that these must be determined entirely by conditions in different territories. He said that while steam skidders are best in some places, skidding by team is unquestionably best in others and that the logger should use his own good judgment.

George N. Harder, general manager of the Rib Lake Lumber Company, then outlined the work he is accomplishing through the use of a steam log hauler or traction engine log hauler. He recommends this type of hauling where the distance is five miles or greater, but says it is not cenomical for shorter distances. Mr. Harder figures that the engine is good for forty miles a day and that while he had never worked his machine to full capacity, the maximum haul has been 150,000 feet of logs and fifty cords of bark on a seven-mile haul. The average load was fifteen loads of logs. approximately 80,000 feet, and three loads of bark aggregating thirty cords.

E. S. Hammond, one of the oldest of the northern loggers, now located at Rice Lake. Wis., although unable to attend, sent in a mighty interesting paper on the management of woods help. Because of lack of space this paper will not be published until the next issue of Hardwood RECORD. The gist of if, however, would indicate that Mr. Hammond believes that the best way to handle woods employes is to treat them as squarely as possible as long as they will allow such treatment and when they refuse to be governed fairly to give them some of their own medicine, the dose being at least twice as large as that administered by the men themselves.

Lamont Rowlands of the C. A. Goodyear Lumber Company stated that his company kept an accurate inventory of all foodstuffs used in the camp at Blue Bill. Mich. and submitted a record of the material consumed during one year by an average of 150 men. The record showed that the cost per man per day was \$.3011. He said that adding to this the wages of cooks and assistants and distributing the entire cost of feeding men over the days of productive labor made the cost for board for each active day about sixts-five cents per man.

W. E. Hallenbeck of the Girard Lumber Company of Dunbar, Wis., read a paper on the steam ground skidder. Mr. Hallenbeck expressed the belief that steam skidders are only in their infancy. He spoke very enthusiastically of steam skidding as compared to skidding by horses. He said that his experience was that with a railroad laid out 1,200 feet apart to accommodate horse skidding an enormous amount of work was necessary to lay the tracks. He said that the grading of such branches together with the cutting and clearing of right of way, including laying of steel, surfacing, etc., cost about \$1,500 a mile in the average northern country. This does not take into account ties, steel, spikes, bolts, etc. He figured that this mile track with a skidding width of 1,200 feet for a team gang gives 145 or 150 acres containing on an average in the North approximately 1,500,000 feet of logs, from which it will be seen that the railroad cost \$1.00 per thousand. the skidder Mr. Hallenbeck figured that twice the ground would be covered with a less cost for labor.

Mr. Hallenbeck closed his talk with a description of work done in railroad building with a ditch digger for railroad cuts and grading. He said that a crew of five men and one team built a mile of grade in heavy soil with a great many boulders, average cuts, figuring a fourteen-foot crown to allow a steam skidder to go through cuts, for \$425,00, including stump nulling.

Following Mr. Hallenbeck, J. W. Gleason of the Goodman Lumber Company of Goodman, Wis., came to the defense of the horse with a paper that gave many excellent hints as to the proper care of stock in the woods. This paper also will be carried in a later issue because of lack of room in this. Mr. Gleason added that each team of horses in his operations logs 1,000,000 feet of lumber yearly for his company.

George H. Holt of Chicago was unable to attend the meeting, but sent a paper that gave some mighty interesting and valuable suggestions. Mr. Holt said that the idea of collective buying of fire insurance has already been launched. He then said the same idea might be utilized in the purchase of materials for camps. He said that this method would not only greatly reduce the cost of logging operations, but would standardize materials and processes and statistical records. He said that wages mean nothing as a test of or guide to efficiency apart from the record of the product resulting from such wages. He said that the total cost of logging in a camp is of little value unless it is known whether there has been efficiency in one department and waste and inefficiency in another. He said that because practically all of the problems facing the loggers in the North are similar, the opportunity for collective service and standardization is apparent.

Mr. Holt then said that the logging camp is a deplorable example of waste of material and labor coupled with the crippling of the energy which it is designed to protect and maintain. He said that while loggers have used a certain degree of intelligence in feeding their animals, they had conducted a debauch for their men. He said that standardization would cover the duties of camp cooks, rations for various meals and days of the week, accounts, forms used in organizing and conducting logging operations, purchase of supplies, equipment and apparatus, keeping track of condition, location and quantities of supplies, and checking waste. The last two effects which such an association of logging interests would have would be the maintenance of a standard of quality and supplies and a means of easily getting rid of second-hand equipment.

H. J. Beckerle, in charge of the Wisconsin Free Employment Office, then described that organization, after which a general discussion followed as to labor supply which is now more abundant than last summer. Woods wages would seem to range from \$26.00 to \$35.00 per month with board and means whereby camps may be made more sanitary and attractive. The general discussion took concrete form in motions by Lamont Rowlands and R. B. Goodman for the appointment of two committees to report at the annual meeting of the association to be held the later part of January. One committee was created for the welfare work and the other for standardization. The former committee will go into the best means of improving camp conditions while the other will work for a uniform system of reports covering all systems of logsing operations.

After suitable resolutions, the meeting adjuurned.

An Instructive Meeting

The last of a series of welfare conferences to be held under the auspices of the welfare committee of the Yellow Pine Manufacturers' Association was held at the Marion hotel in Little Rock on December 9. The conference was arranged for a general get-together meeting, but special attention was given to the discussions of such subjects as "Community Betterment," "Industrial Hygiene" and other discussions looking toward the general welfare and greater efficiency of labor at the lumber mills, as a result of improving the working, living and leisure conditions of the employes.

Mill owners, including yellow jene and hardwood manufacturers together with employes, were especially advited to attend this conference. In the carrying out of the program the welfare committee was assisted by the Young Men's Christian Association.

The program for the Little Rock meeting was as follows:

Morning session, 10 30 o'clock J. Lewis Thompson presiding, opening address. J. Lewis Thempson, Houston — Community Highene in Sawmill Towns and camps and Its Relation to P. valitor Modenne. For Worgan Smith, secretary State Board of Health; "Emergency Work in Mill and Hospital," Dr. J. E. Sparks, Crossett; discussion.

Afternoon session, 2.30 o'clock, Charles R. Towson presiding: "Promotion of Sevings and Theilt," C. A. Buchner, Millylle: "The Employer's Brusher Bulble Schools," Prof. George B. Cook, state supering the Cook of the Cook o

Evening session, 7/30 o'clock, H. H. Foster presiding: "The Church in the Mill Town and Logding Camp," Rev. J. W. Workman, Malvern; "Progress of Welfare Work in the Nation Charles R. Towson, secretar, Industrial Department International Committee Y. M. C. A., New York.

Hardwood Manufacturers' Association Meeting

President W. E. DeLaney has announced that the twelfth annual meetling of the Hardwood Manufacturers' Association of the United States
will be held at the Gayose Rotel, Memphis, Tenn., January 21 and 22,
1914. In taking the convention to Memphis this time the association
is invaling the heart of the hardwood producing country. The conventions in 1910, 1911, 1912 and 1913 were held at Cincinnati for the
reason of that city being located on the border line between the large producing section in the South and the principal consuming markets in the
North and East. The meetings were held at Cincinnati for the purpose
of bringing the convention closer to the consumer, and all conventions
held in Cincinnati were marked by a large attendance of consumers.

A special invitation will be extended this time to the consumer, who is always a welcome addition to these interesting meetings.

Memphis is probably the most readily accessible meeting point that could be selected for the hardwood convention from the standpoint of the producer, as it is estimated that over ninety per cent of the hardwood producers are within one night's ride. The officers of the association are now at work on the program.

Indiana Manufacturers to Meet

The Indiana Hardwood Lumbermen's Association announces through Secretary C. H. Kramer that the next annual meeting will be held at the Hotel Denison, Indianapolis, on Wednesday, January 14. The usual plans are being made for entertainment and other features.

Van B. Perrine of Fort Wayne is president of the association, Bedna Young of Evansville vice-president, James Buckley of Brookville, treas-

Memphis Club Candidates in Lively Campaign

The current week promises to be one of marked activity in lumber circles, not with respect to the amount of lumber manufactured or sold but with regard to the amount of energy and enthusiasm expended by the gentlemen who have been named as candidates for officers and directors of the Lumbermen's Club of Memphis and the various members of the trade who are backing the different candidates.

There was a special meeting of the club at the Hotel Gayoso on Saturday, December 6, called for the purpose of allowing the nominating committees, appointed a week ago, to name its candidates and, with the report of this committee, the campaign was declared on in carnest. There were more than seventy members present at this meeting and enthusiasm ran high. Immediately following adjournment the candidates and their supporters started to work and, in addition to personal calls, there were telephone messages, special delivery letters and other means used to secure votes. The campaign will last only a week but it will lose nothing In Intensity because of the brevity thus imposed.

J. D. Allen, vice-president of I. M. Darnell & Son Company, heads the blue ticket, while his opponent is S. M. Nickey of the Green River Lumber Company and the Nickey Brothers Hardwood Company. Both men are well known and both have large personal followings. Both have done efficient work in behalf of the club and both have determined that they will put forth every possible effort to secure the highest office in the gift of a club which has not only a national but an international reputation as the most active and aggressive as well as the most important local lumber organization connected with the entire lumber trade. The campaign, however, will be equally warm for the other offices and there is every indication that there will be no cessation of vote-gathering until the final ballot is cast at the Business Men's Club building next Saturday evening. The full tickets follow:

Reps

PRESIDENT—S. M. Nickey, Green River Lumber Company.
FIRST VICE-PIERSIDENT - Rathh May, May Brothers.
SECOND VICE-PIERSIDENT - J. R. Blair, Crittenden Lumber Company.
SECRETARY-TREASURER C. G. Kadel, P. F. Stone Lumber Company.
DIRECTORS—R. M. Bennett, Bernett Hardwood Lumber Company R. H.
Darnell, R. J. Darnell, Inc.; O. M. Krebs, McLean Hardwood Lumber Company

BLUES

PRESIDENT—J. D. Allen, I. M. Darnell & Son Company.
FIRST VICE-PRESIDENT—R. J. Wiggs, R. J. Darnell, Inc.
SECOND VICE-PRESIDENT—F. G. Smith, Mossman Lumber Company.
SECRETARY-TIELSTEER C. G. Kadd, P. F. Stone Lumber Company.
DIRECTORS—C. C. Dickinson, E. Sondhelmer Commany; T. E. Jones,
F. T. Dooley Lumber Company; J. F. McSweyn, Memphis Band Mill
Commany.

After the manimating committee had made its reports, the various candidates were called upon and responded briefly, arosising much enthus stasm and bringing terth a great deal of appliance. All of the candidates declared that they would win and, if their earnestness could be taken as a safe criterion, a miracle would have to be performed to prevent the club from having two sets of officers. Experience has proven, however, that only one set may be elected and a miracle is hardly likely C. G. Kadel, candidate for serietary-treasurer, to succeed himself, is the only one who is certain of election and he is taking life quite easy in the knowledge that his odice is safe without personal effort on his part. The others will have to hustle and there is nobody who realizes this more than the gentlemen themselves. These elections arouse unusual interest every year and serve to keep enthusiasm up to that high state which is productive of good results and which has been an important factor in the successful career of the Lumbermen's Chilo of Memphils.

There will be no regular meeting of the club next Saturday afternoon. Instead the election itself will be held in the evening, during which refreshments will be served. The names of the officers of election will be announced later. In the meantime the membership of the club rests confident in the knowledge that, no matter which candidates are finally selected, the affairs of the organization during the coming year will be in strong hands.

Meeting of Cincinnati Club

on the night of becomier I the Lumbermen's Cald bold of, of the most enthusiastic meetings of the year. The occasion was the regular monthly meeting which the entertainment committee arranged for at the German village of the Wiedemann brewery which is one of the most ideal places in this section to hold a stag meeting of this kind. The village was especially built for such affairs and the menu, consisting of the sixty members present and many of those who had not visited the place before were profuse in their praise of the novel dinner and surroundings.

After the dinner was disposed of and while the trimmings direct from the wood kept flowing right along, President Hagemeyer called the meeting to order. After the usual formalities—such as reading of minutes and reading of communications—was disposed of, the question of assisting the Mississippi River Levy Association in securing the much needed appropriations for the proper protection of property along that waterway was taken up and resulted in Walter Quick of Richey, Halsted and Quick being sent as a club delegate to Washington to be on hand and lend all possible assistance and to see personally the congressmen from this district and urge upon them the importance of giving the measure their support. Another matter of much importance taken up was the reinspection of lumber when in dispute, the question having arisen over a decision of the arbitration committee, part of which involved some inspection over which the club has no control. Further developments are looked for in this matter at the meeting in January.

The approaching holidays with their festive occasions must have been in the mind of James Zoller of the Talbert-Zoller Lumber Company, as at the close of the meeting he arose and apparently voiced the sentiments of all present in causing the entertainment committee to receive instructions from the chair to make the January meeting a "special" affair and as many suggestions were made to the experienced entertainment committee, it is needless to say that the next meeting will be well attended.

Philadelphians Hear Interesting Sales Talk

The Philadelphia Wholesale Lumber Dealers' Association inaugurated a new feature when it gave a banquet at "Kuglers" on November 21, to which it invited all the salesmen of the members to be present to listen to a lecture by Herbert U. Casson, vice president of the H. K. McCann Company, New York, the well-known discourser on business ethics, on the subject of efficient salesmanship. After a dinner of sumptuous appointment at 6:30 p. m., at which one hundred diners sat down, President Owen M. Bruner of the Owen M. Bruner Company, introduced F. Ashman Souder of E. A. Souder & Co., who explained that the object of the gathering was to give the men an opportunity to hear a comprehensive and instructive lecture on the most efficient and successful salesmanship, and also to enable the members and their men on the road to become better acquainted. Mr. Souder then gave some interesting and laughable experiences of salesmen he had known, after which Mr. Bruner introduced Mr. Casson and prepared his bearers for a cyclonic, whirlwind talk on a subject

Mr. Casson began by saying that there were essentially two men ing of the business—the other got the business. In regard to lumber selling of the business—the other got the business. In regard to lumber selling he said he had never talked to a bunch of salesmen before who traveled without samples and who sold goods they never saw. As no two thumbs are alike, he said, so no two men talk alike. It is merely a matter able to make the buyer believe all you tell him. To be a good salesman you must be a man of character. Selling goods is a line by itself; inventors and manufacturers know nothing about selling goods. An inventor has an idea, he creates and he sticks to this idea; the manufacturer has no idea of his own, but uses that of another, and manufacturers the goods. He looks inward all the time, while the salesman looks outward—has to watch the other fellow. Now, the salesman is ust as important as the inventor or the manufacture; he has just as

s well adown for horo of the sight or with the deferror of stuff to another so and worth. It's the putting of the goods across to the buyer that tells, and City on the best of the oscillation of the property substitution of the boost of the term of the boost of the

Mr. C. s. of s. of xo. Say, t. Tody xon manplace of business, walk up and down before the house and think out what you want to do. As an illustration, when you build a house you have a blueprint to go by, and so should you be prepared when you approach your man. Handling men. Mr. Casson said, is a profession, an art a wonderful one. Engineers and locomotive builders have plans and directions for carrying on their work, while the lumber salesman has nothing but his personal equipment to convince and bring over his man, and man is the most complex piece of machinery in the world.

The first issential in a salesne it is to be able to listen, a difficult job at times, as a salesman naturally wants to talk; but many orders have been booked by being good listeners. Then, never argue with a customer If he says the world is tlat, let him have it that way; what's the difference? Every man has a grouch; study his grouch; he has some thing on top he wants to get out wants to tell it to somebody. Jet him get it oil. Why that's what we get married for to have someone to sympathize with us someone to whom we can tell all our trounge Never go head on to a man, which often kills your chance of getting an order. Go with him not against him it makes a lot of difference. There the two kinds of hundles to a min find out which hundle moves your man and take cold of it. It c man's name is Brown, don't call him Smith: if you are not sure of his name don't talk to him. To get a man's name wrong is like hitting him in the face with a wet towel.

Mr. Casson, then gave some valuable advice as to effective sales said he went into a store recently and asked for a grey neektie; the nov in charge brought out a brown and several other colors in rotation Mr. Casson kindly gave the lad this advice. "If a man knows what he wants, let him alone dif he doesn't, then it's time to show him something else. Get him interested in something that will appeal to him; for instance, tell him that here is a tie which is just the color of his eves that fellow I'll wager will sell six ties instead of one." You can sell better to the eye than the ear. Carry a pad with figures of your article on it; the eyes follow the pad and there is something to interest.

Another piece of advice of Mr. Casson was not to start talking lumber right away get around to it gradually. Insurance men are the best salesmen-they talk to you about yourself; they will bet you you wont die in twenty years; you bet you will. Those fellows have the statistics and know- they are talking to you from your own point of view, and they will get your policy in the end. "There has always been a great cry of supply and demand talk," went on Mr. Casson, "which is a lot of nonsense. Why the Welsbach people some time ago found that a limit to sales in New York had been put at 27,000, when in one year they jumped to \$150,000-talk about supply and demand; it's good salesmanship, not demand that is needed. Selling a man what he wants is easy but true salesmanship is knowing how to handle your man. Salesmanship is an expansive art; all jobs eventually get stale. You slide into old routine work and when you arrive at that stage you must needs wake up and make a fresh start. Be a person, not a habit: take joy in your work, don't let it get into mere grinding. Study your work as you would a problem." Mr. Casson said that some years ago farmers did their daily task, had some cows, some horses and stables for them, a kind of house for themselves to live in and about \$30 over at the end of the year; later on somebody comes along and digs down sixty or seventy feet and finds oil, and the Standard Oil Company is formed and several hundred million dollars worth of oil is realized. The farmer was satisfied to live on the surface and to die poor. You must dig down-don't stop satisfied with the old routine and everyday dope. Keep studying, keep digging. A 'certain deep digger is curing a ham by electricity in two hours instead of thirty days. Mr. Casson advised his hearers to study the trees and the many uses that can be made of the wood. He felt sure the lumbermen knew less than they should of the nature and

He brought up the subject of cutting out the middleman by the manufacturers, which he enlarged upon at the last Lumbermen's Exchange Don't sell your output to one concern, he advised. One Roebuck went to a manufacturer and asked him if he would sell him his entire output and take 12 per cent on the goods. The manufacturer was delighted-it was a dream be had been waiting for. A year went around. Roebuck informed him be could not pay over seven per cent and a better grade of goods must be made, etc., etc. The manufacturer could not meet the demand, so there was only the alternative to sell out at forty cents on the dollar, as the salesmen and customers of course were gone.

As to the salesmen's earning power, Mr. Casson said that if you don't earn three times your pay you will be fired. The first third is your salary, the second is for costs, rent, etc., and the third for the boss. A fellow has an accident on a railroad, his friends set him up in a cigar store. He knows nothing about the business-he sells five eigars for a quarter, is much elated and takes one for himself and smokes it, and by so doing smokes up the profit. To help the house in cutting cost is part of a salesman's duty. Don't talk price to customers, is Mr. Casson's admonition talk goods. Learn from the automobile salesman—you

never hear him say anything about price. He just talks up his machine and the price is pad without a naurmur. Be a booster, feel out your people be like a rabber ball which the harder you knock the higher it will bounce. Most your men with a smile; optimism will help sales, Never have any more sibles on your list. Rub the labels off the door marked hepossible and bring those fellows over. No man knows what he can do until he tries. Why, in San Francisco the earthquake made every cripple in town get up and run two miles. The survival of the fittest is the rule in thes world, and the attest is going to win. It is said the people inherit the carth, but you may rest assured the man who goes after it is soing to set it. Mr. Casson advised the employers to encourage their men, to give them a pat on the back, if they self more, then pay them more. It will help a lot toward increasing sales,

When Mr. Casson was through talking, Joseph P. Comegys made a motion that a vote of thanks be given to Mr. Bruner and the five directors of the association for bringing Mr. Casson to Philadelphia, and to Mr. Casson for his most interesting and instructive address. Both

Specches by J. Randall Williams, Jr., J. Randall Williams & Co.: Robert G. Kay, Kay Lumber Company; Thomas B. Hammer and T. Philip Hammer, T. B. Hammer Lumber Company; John J. Guivinen, Producers Lumber Company, and A. J. Levy, Forest Lumber Company, were made relative to the advantage of the conterring together of employers and employes. In behalf of the salesmen this get-together social dinner was highly approved and it was suggested that much better results would be obtained if the employers would consult, more at length with the salesmen get a fittle chumny, so to speak. The wholesalers made reply that the evening function in question was about on the line suggested. and hoped for mony a petitions in the future

Annual Baltimore Exchange

The annual is cting of the Baltimore Lumber Exchange which was held on December 1 at the Merchants' Club proved to be exceptionally enjoyable and interesting. It was productive to a pronounced degree of the feeling of good fellowship and co-operation, and it was distinguished for the reading of yearly reports that afforded much encouragement to the membership, apart from the delightful menu served at the banquet following the business session, and the other social features connected with the event

It was stated, for instance, in the report of the retiring president, Theodore Mottu, that the quantity of lumber inspected by the inspectors of the exchange during the past year was larger than for preceding years, and that the bureau was coming to be more and more recognized as observing the highest standards and as deserving to the fullest extent the confidence of the trade. Only one reinspection was ordered during the entire year, which shows to what extent the lumbermen of Baltimore and others have come to rely upon the official inspection.

The proceedings opened with the retiring president calling the members to order and asking Secretary L. H. Gwaltney to read the minutes of the last meeting, in September. Mr. Gwaltney then, as treasurer of the exchange, read his report, which showed that the year from November 30, 1912, to November 30, 1913, had ended with a balance in the treasury, and with an increase in the membership, the report being approved with expressions of satisfaction.

Mr. Mottu then called H. Rowland Clapp to the chair, while he preented his annual statement, which set forth among other things the following, applicable to the hardwood trade:

sented his annual statement, which set forth among other things the following, applicable to the hardwood trade:

At the hearlining of the year trade conditions generally were in exceptionally good shape, and we all thought that a banner year was before us. Lumber was very hard to get; the wife all ferough the South were busy frequent, and you seldom, if ever, with all brought the South were busy frequent, and you seldom, if ever, got more than a minimum car. Prices were very firm: in fact, everything looked good and we all predicted good business. Early summer brought a great change, and very suddenly we were confronted with a condition exactly the opposite, which, unfortunately, has continued up to this time. Now you do not have to wait for shipments; your mail is full of circulars offering lumber of all kinds at any old price; can mand. This, I believe, is applicable to all producing sections.

The inspection bureau, I am pleased to state, has had excellent support from the members during the year. With an open season, lumber has arrived freely, and our inspectors have all been kept busy, even with the increased numiter, having added three men in the spring. In 1912 the increase ourselved the control of the contro ogs, and the favorable situation offered by ocean sailings from orked. The demand for our lumber and logs, and Baltimore, together with the advantages offered is port should bring to us our share of the busines

Our membership for the year shows a ner gain of one, the number of members at this time to ang seventy three

I thank two for the loval support that you have given the during the two years that I have had the bound of \$11,002 you as president and while I reget exceedingly that those have not so no years of you many achievements. I trust that our exchange is at a 55 home the worse off to having added any name to its list of former yearships.

The report of the hardwood uispection committee, which was read by the secretary reported in increase in the quantity of nardwood limber Inspected, through the exchange inspect is and with greater efficiency than in previous years. The belief was expressed that the close supervision of inspectors' work by the clust inspector had lone much to remove cause for complaint. The total quantity of lumber inspected during the year was 12,677,517 feet. The committee also announced that the exchange inspection was now governed by the 1913 rules of the National Hardwood Lumber Association - John L. Alcock is chairman of the committee with J. J. Kidd, and J. axes. J. Lannon, as the other mombors

The report of the chief inspector, J. G. Creamer, showed the total quantity of lumber inspected, the different kinds of woods included in the work of the inspectors, and the inspection for each month of the exchange year which runs from Doombar 1 to November 30 of the tollowing year

The ticket named by the nominating committee, by H. Rowland Clapp as the regular ticket, as published in the last issue of Hardwood Record, was put through on motion by the secretary casting the ballot, no opposition having developed. One circumstance about it is the slender representation of the bardwood trade. With the exception of John I. Alcock as a member of the managing committee, there is no hardwood man on it. Ridgaway Merryman, the new president, is engaged in handling North Carolina and other yellow pine. He has had a long experience in exchange business, however, and it is confidently expected that his administration will prove very satisfactory. Mr. Merryman, when conducted to the chair by Henry C. Matthews and Wil-Ham M. Burgan, made a neat little speech, in which he expressed thanks for the bonor conferred, declared his diffidence in following such a capable predecessor as Mr. Mottu, and then asked the earnest co-operation of the membership to the end that the usefulness of the Exchange might be increased

This ended the Jusiness session, and the members adjourned to the banquet hall on the lower floor, where an elegant menu, including such well-known delicacies as mallard duck, terrapin, oysters on the half shell, In addition to salad a la Merryman, made in honor of the new president, Mumm's extra dry, etc., were served at handsomely decorated tables, while an orchestra discoursed music. After the feast a vaudeville entertainment was given. About ninety persons sat down at the tables, and the utmost good feeling prevailed.

St. Louis Exchange to Hold Annual

The following letter which speaks for itself, has been sent out to the members of the St. Louis Lumbermen's Exchange, by President F. H. Smith, notifying the members of the annual dinner which will be held on December 16 probably at the Mercantile Club.

December 16 probably at the Mercantile Ciab.

The annual meeting and dinner of the Lumberman's Exchange will be held on Tuesday, December 16. At this meeting a brief yet interesting account of one of the most memorable years in the entire history of the exchange is to be given. The exchange has more members, has a wider scope and is doing more to boost the city and to protect the interests of the tade than for a great many years. Possibly a lifteen minutes' talk of business conditions and prospects will be given. Nominations of officers for the ensuing year will be made. The meeting will sit down at 6:30 p. m. and a space will be left near the door for any who may be a few minutes late. Help establish the enviable record of being on time.

A number of out-of-town members are expected, and every indication or the ensuing year will be made. The meeting will sit down at 6:30 m and a space will be left near the door for any who may be a few inites late. Help establish the enviable record of being on time. A number of out-of-town members are expected, and every indication lats to a very profitable meeting which will close around 9 o'clock or at the lates 19:30 o clock. We have been starting things all the west.

A number points to a the latest !

We have been starting things all the year. Now let's get together for a grand wind-up of the year.

Monthly Meeting Philadelphia Exchange

The regular monthly meeting of the Lumbermen's Exchange, preceded by a supper, was held on the evening of December 4, President Benjamin Stoker in the chair. For the evening's entertainment and instruction Mr. Stoker was successful in securing J. Frank Deschant, manager Sheldon School, Chicago, Ill., to give a lecture on "How to get business and realize a fair profit." The strongest point in Mr. Deschant's address was business efficiency. He pronounced this a great era for business education; psychologists are writing, he said, for the edification of the business man. He dwelt largely on conventional, statute and fundamental laws which are essential for carrying out the proper and scientific business methods. "Science of business is science for service and he who profits in business serves best," quoted Mr. Deschant. He mentioned four factors in business to be considered; first, the man who sells the goods; second, the goods; third, the customer, and fourth, the sale or close of deal. Every man's value is based on his individuality. The less watching he needs, the more valuable his service. "What is the cause of so much necessary supervision?" he asks. "Errors." There are two kinds of errors, omission and commission. Fundamental intellect comprises thought, memory and imagination. There are two important points to consider in efficient selling-doubt, the negative, and faith, the positive. Doubt in your house, your goods or the buyer will cause loss of sale every time, where faith in these will often win the day. Then the will comes in; you are what your will makes you. Talk goods and not price, Mr. Deschant advised, and try to add points to encourage the sale when price is onetioned; be determined to get a man to do what you want but to do

Having another engagement, Mr. Deschant was obliged to be as concise as possible. A rising vote of thanks was tendered him for much valuable

The meeting then went into session. After the reading of the minutes of the previous meeting, Prederick S. Underhill, chairman of the committee representing the Exchange at the National Conservation Congress, read a very interesting and detailed report of the meeting. It announced at this meeting that the exchange had become a member of the Chamber of Commerce of the United States of America, which will hold its annual meeting in the New Willard hotel, Washington, D. C., February 11, 12 and 13, 1914. It was decided by the board of directors of the exchange that the presidents of the exchange hereafter will be the representatives to attend all of the annual meetings of that body

Chicago Association Hears Able Address

On Tuesday, November 25, the Lumbermen's Association of Chicago held a very enjoyable luncheon in the main dining room of the LaSalle Hotel. Following a pleasant half hour for luncheon, President MacLeod called the meeting to order and introduced Harry A. Wheeler, president of the Chamber of Commerce of the United States. Mr. MacLeod paid a fitting tribute to Mr. Wheeler's accomplishments.

Mr. Wheeler's talk dealt with the value of association work. He asked if those present ever realized that organizations are the natural result of economic changes. He said that there is no spasmodic organization into chambers of commerce, trade associations, etc., but that such bodies are formed when there appears to be a dire necessity as a result of the constant revolution in economic conditions. He stated that in countries where the high condition of development exists, such organizations are most common, while in undeveloped countries there is no need for them. He said that they are the result of evolution from certain conditions to a finer and more lofty condition of affairs requiring a greater effort on the part of the population to maintain such a high level. He then traced the usual development of the highly specialized modern business organization from the periodic gatherings of men representing any one body of business up through the various specialized associations which have finally resulted in the present efficient and nation wide association.

He said there are two classes of organization, one being the community association and the other the trade or business association. The first are those organizations which have for their purpose the upbuilding of a city or other municipality, and on the other hand the trade or business associations have as their purpose the furtherance of the interests of any particular club of business men.

Mr. Wheeler stated that these two forms of organizations are more fully and widely developed in the United States than anywhere else on the civilized globe. He said that King George chartered the first chamber of commerce of New York City, but that only during the last decade has this association been efficient. It accomplished little because there was no set purpose for specific accomplishment.

Mr. Wheeler stated that no one organization is all-sufficient in itself. but must eventually find lodging in some other organization of a somewhat broader scope and that eventually the train of associations will lead up to the formation of an international chamber of commerce.

Mr. Wheeler then touched upon the purpose of the reorganization of the various lumber associations of Chicago which was effected some time ago. He stated that the main duty of the present association is to free the city from the stigms of previous sharp practices

He stated that the trend of modern business has taken it well beyond individualism and that the present-day business unit is the group. He instanced the death recently of various men holding enormous responsibilities of the business of the nation and stated that as a proof of the passing away of the individual control we have the spectacle of the enormous business interests of this country proceeding calmly and unruffled because of such events. He said that in business life the man who rubs elbows with his fellow men, gaining their ideas, is the man who makes the biggest success in life and that this idea applies particularly in association work. He stated that the Chicago association should secure for members all creditable firms and then should go about the task of reforming those not now considered eligible for membership.

Mr. Wheeler then reviewed the history of the organization of the association of which he is president. He said that 450 bodies of business men have joined since April, 1912, and that these associations represent an individual membership of 250,000.

He stated that the real reason for the necessity that now exists for business men to have to make their influence felt in the government of the country is the fact that the character of this country is changing from agricultural to industrial. He said that last year the industrial production of the country was \$20,000,000,000 and the agricultural production \$9,000,000,000. He stated that the big problems are now industrial rather than agricultural.

In speaking of the tariff changes in effect. Mr. Wheeler said that it is not the tariff which is paid on any import which affects the price of a foreign commodity, but rather local conditions. Speaking of increasing cost in production. Mr. Wheeler stated that the non-producing element and extravagance are increasing wages above all else and that coincident with this increase in wages there is no increased earning power offered.

 Γ_{ij}) are to incontrol as story (lear for the dimination of parallel story) and from Ω points (a.e., i.e. the promulgation and maintenance) are a consistency of a constant of the promulgation of the properties of the form Γ_{ij} and Γ_{ij} and Γ_{ij} settling the various questions to each Γ_{ij} to work the thing out to a beginned and.

Mr. Wheeler reviewed the currency activities in Congress. He said that taker to take better the banks will protect themselves, but that the business men's problem is to know whether or not currency legislation will give flexibility and stability to our currency. He stated that we will always have periodical panies and that laws should be sufficient to cover these unusual conditions.

Mr. Wheeler said that following trust legislation will come social begislation and there will be a wave of new thought demanding more intelligent tarifts, wise currency laws, the acceptance of the advice of business men in regard to trust legislation, and the study of social evolution. He said that the Chamber of Commerce of the United States stands for these things and speaks for the business man to the government, seeking a hearing with the government.

Following Mr. Wheeler's talk, F. L. Brown, ex-president of the association, responded for the lumbermen. President MacLeod then brought up the question of affiliating with the National Chamber of Commerce, E. A. Thornton moved that such affiliation be effected. The motion was carried unanimously.

President MacLeod then presented C. R. Henderson of the University of Chicago, president of the United Charities, who spoke appealingly for the support of the association in the work of his organization. He told of the purpose and organization of the United Charities and at the conclusion of his talk a committee was appointed to secure subscriptions from the members of the trade in Chicago.

E. A. Thornton then reported for the building committee and Charles Westott for the membership committee, after which the meeting adiourned.

Meeting Northwestern Hardwood Association

The Northwestern Hardwood Lumbermen's Association met at Minneapolis on December 2. This was the twenty-fifth meeting of the organization. The sessions were held at the West Hotel and were followed by a banquet and a theatre party in the evening.

President F. A. Nolan was unable to attend the meeting and in his absence Vice-President A. S. Bliss took the chair. Mr. Bliss reviewed general market conditions, expressing as his opinion that conditions in the Northwest are in good share.

Treasurer C. F. Osborne showed a satisfactory balance in the treasury Mr. Osborne was followed by Secretary J. F. Bacon.

Following reports of the arbitration committee, railroad committee and of J. T. Jones on the proposed lumber schedules for Minneapolis, the secretary read letters of regret from officials of the National Hardwood Lumber Association stating that they could not be in attendance.

The feature of the meeting was the general discussion of the conditions of the general market.

Nashville Club Fights for Milling-in-Transit Privileges

The Nashville Lumbermen's Club held a meeting in that city on Tuesday, December 2, at which the most important question was the report of the transportation committee, which recommended that complaints against the Louisville & Nashville Railroad be put into the hands of John R. Walker of the Lunbermen's Bureau of Washincton. The complaint has to do with discriminations with the Louisville & Nashville and Nashville, Chattanooga & St. Louis railroads in the matter of milling-in-transit privileges on lumber.

It is claimed that these privileges are not granted to Nashville, but are granted to competitive points with the resulting harmful effect upon Nashville shippers.

John M. Pritchard Elected Secretary of New Gum Association

Lumber interests in Memphis are very much pleased with the fact that John M. Pritchard of the John M. Pritchard Lumber Company, Memphis, has been elected secretary of the Gum Lumber Manufacturers' Association by the board of managers, which met in Chicago at the Lumbermen's Club on Saturday, December 6. Much pressure has been brought to bear to secure the consent of Mr. Pritchard to accept the position. He has been discussed therefor as the most satisfactory man available ever since the association was launched and those members of the board, including John W. McClure, are congratulating themselves upon the fact that Mr. Pritchard has, at much personal sacrifice, indicated his willingness to serve. The position of secretary is regarded as distinctly the most important in the organization of the association, as the work of that body will be carried on largely through his efforts. The association has mapped out a big piece of work, namely, that of placing red gum on the market to much better advantage than heretofore, and, with Mr. Pritchard in charge, it is believed that the members of that organization will have every reason to be glad of the fact that he is to act in that important capacity.

Mr. Pritchard came to Memphis five or six years ago from Indianapolis. Ind., and in that brief period he has not only worked up a lucrative business but he has also firmly intronched himself in the friendship of every man connected with the lumber industry. He has served the Lumbermen's Club of Memphis as president during the current year and has made an able and efficient official. Besides his official connection with the Lum-

bermen's Club of Memphis, he has been for a number of years prominently identified with the National Hardwood Lumber Association as chairman of the inspection rules conduittee. On the occasion of the recent banquet tendered by the Lumbermen's Club of Memphis to the Nashville and Louisville Immbermen and the delegates to the red gum conference, Secretary Fish of the National association said that if there were any one man to whom that organization owed more than to anybody else, that man was John M. Frith ard. His friends regard the eulogy of Mr. Fish as thoroughly merited on the part of the recipient and are predicting that, as secretary of the Gum Lumber Manufacturers' Association, he will, through his ability and efficiency, not only serve the organization well, but increase the high regard in which he is already held by all who know him.

It is announced that headquarters for this organization will be maintained at Memphis. John W. McClure, first vice-president of the association, was chairman of the committee appointed to select headquarters. It has been regarded as practically certain from the time the new organization was first discussed that Memphis would be made official headquarters not only because of its prominence as a lumber manufacturing center and its fitness as a result of being at the head of gum production in the United States, but because it was convenient for all those interested in the gum business to reach. One of the first steps to be carried out by the secretary will be to convass with a view to securing as a member of this organization every firm that produces gum lumber. Following this there will be an educational campaign in behalf of this lumber which is expected to very greatly increase the outlets therefor. Particular efforts will be made to build up a big foreign trade in red gum through a campaign of instruction that will open the eyes of foreign consumers of southern hardwoods to the beauty and utility as well as the relative cheapness of this particular lumber.

At the meeting of the officers and board of directors of the gum lumber association, held in Chicago, as above noted. President C. L. Harrison stated that the board entered enthusiastically into the business of getting the work of the association under way.

In addition to the election of Mr. Pritchard as secretary, and the selection of Memphis as headquarters for the association, the board transacted other business.

A resolution was unanimously adopted as follows:

WHEREAS, The Gum Lumber Manufacturers' Association desiring the fullest understanding of the conditions surrounding the gum lumber industry, and desiring the full co-operation of all gum lumber producers, realizes that its position as regards association matters should be known, therefore be it

RESOLVED, That the Gum Lumber Manufacturers' Association hereby declares its complete neutrality with all other lumber associations.

A committee was appointed to arrange for a gum exhibit at the Forest

Products Exposition. Details of this exhibit will be carefully worked out so as to show the adaptability of gum for various purposes.

Permanent offices will be in the new Bank of Commerce and Trust

Permanent offices will be in the new Bank of Commerce and Arist building. Memphis, the temporary offices in that building being in rooms 908 and 909.

Annual St. Louis Lumbermen's Club

A banquet and soirce, in addition to the regular monthly meeting and annual election of officers of the St. Louis Lumbermen's Club, took place at the Mercantile Club, Tuesday evening, December 9. The wives, daughters and sweethearts of the members participated and enjoyed not only the entertainment but also the business portion of the meeting.

An elaborate dinner was served to nearly two hundred persons, from 7 to 9 o'clock, during which there was a cabaret performance. About 9 o'clock the regular business meeting of the club and the election of officers took place. After 9:30 the cabaret performance was resumed and continued until 11 o'clock, when there was dancing until a late hour.

At 9 o'clock President Whitmarsh called for order and after the reading of the minutes of the previous meeting gave his report for the year.

The president said he has had the support of all of the members; that there had been no friction in the work of the association. He told what the club had done and what its purpose is, namely, to create friendship and advertise St. Louis as a lumber center. He also suggested what should be done by the coming administration in the way of increasing the membership.

The reports of the secretary and treasurer and the chairmen of the various committees were then given.

The secretary stated that sixty-five new members were received; that the club had 680 visitors from June 1 to Nov. 30. He also told of the progress of the various features that have been inaugurated, and outlined the various functions that have taken place during the first year.

The election of officers concluded the business part of the programme and resulted as follows:

PRESIDENT: John A. Reheis, St. Louis Lumber Company.
FIRST VICE-PRESIDENT: Thos. W. Fry, Chas. F. Luchrmann Lumber
Company.

SECOND VICE-PRESIDENT: C. G. Schilling, W. T. Ferguson Lumber Company.

TREASURER: C. P. Jennings, Berthold & Jennings Lumber Company. Secretary: C. A. Pier.

All the ladies attending were presented with dainty little souvenirs in the shape of several varieties of small children's figures, mounted on little maple pedestals.

With the Trade

F. T. Dooley Lumber Company Incorporated

and incorporated at Memphis The P. T. Dueby Lamber Cot. b. b. or sek of \$20,000 for Topoley soletoned T. E. Jones Secretary and during the post low days with a septitreasurer. Mr. Dooley entered the lumber business on his own account following the dissolution of the Dooley Stern Lumber Company, in which he was a partner. With the incerpethen to has purchased the yards of his former partners and is now using these. The yards have a capacity of from 1,000,000 to 3,000,000 to to) La bar. An office building has been erected on the yards and the firm has removed to this from the Randolph building. W. L. Crenshaw is president of the Memphis Hardwood Flooring Company and is one of the others of the Crenshaw Gary Lumber Company. He is also identified with other lumber and wood-working enterprises in this section. Mr. Jones was formerly employed by the C. B. Dudley Lumber Company. Mr. Dooley has been identified with the lumber business here for a number of years and brings to his new enter prise quite a wide experience.

Riel Lumber Company Incorporated at Memphis

The Riel Lumber Company has been incorporated at Memphis with a capital stock of \$30,000. W. L. Crenshaw and F. E. Gary of the Crenshaw-Gary Lumber Company are among the incorporators. Geo. F. Reil, for a number of years associated with the Paepeke Leicht Lumber Company, from whom the new firm takes its name, is also one of the principal stockholders in the new enterprise.

Business Changes Announced

The Croft Lumber Company of Clarksburg, W. Va., has announced the election of J. Gibson McIlvain of Philadelphia, president to succeed J. H. Henderson, who resigned to organize with his brother the Henderson Brothers Lumber Company of Clarksburg, W. Va. The Croft company has removed its sales office from Clarksburg to Alexander, W. Va., and has appointed J. W. Sullivan general manager at the Alexander mill. The Henderson Brothers Lumber Company will occupy offices in the Empire building, Clarksburg.

Furniture Factory at New Bremen

At a recent meeting of the directors of the Auglaize Furniture Company it was decided to erect a furniture factory at New Bremen, O. The building will consist of one story and will be erected near the site of the Klauke factory. Work will be commenced at once, and will continue through the winter whenever the state of the weather permits

Receiver for Hardwood Company

Paul Johnson has been appointed receiver for the Atlanta Hardwood Company of Atlanta, Ga. A petition had been filed in the Superior Court surrendering the charter. The company was incorporated some time ago, and was thought to be in good condition. A slow market and other difficulties are said to have caused the company to surrender its charter.

Large Sale of Hardwood

A sale of the hardwood timber on a 23,000 acre tract was recently consummated near Bristol, Va., for \$250,000 by Charles F. Hagan, trustee of the estate of his father, Patrick Hagan. The sale included the timber only, and the land with its underlying coal was reserved.

Patrick Hagan was once the largest land owner in Virginia. He bought hundreds of thousands of acres of southwest Virginia lands at ten cents per acre. Some years ago he sold to the Virginia Iron, Coal & Coke Company a boundary of 114,000 acres for \$114,000. This property is now estimated to be worth several millions of dollars. Mr. Hagan thought at the time that he was getting a big price.

Lumberman's Son Brings Glory to Cornell

W. H. Fritz, Jr., son of W. H. Fritz of W. H. Fritz & Co., a young athlete and member of the Cornell football team, has in a day become famous, having played end and haif back for Cornell in the Pennsylvania vs. Cornell game on Thanksgiving day, when the Quakers were defeated. It was through his admirable work in these positions that his team won.

Earl Palmer Entertains

Earl Palmer of Ferguson & Italmer, formerly of Paducah, Ky., but now operating in Mississippi, recently organized a party of unusual interest, which was composed of quite a number of men prominent in bardwood lumber circles. Those attending came by special invitation from Mr. Palmer to visit the company's operations in the neighborhood of New Houlka, Miss., about 110 miles southeast of Memphis. The guests were met at Memphis with special car which took them to New Houlka, where they were well entertained. While the trip was ostensibly a sight-seeing tour, most of the guests carried their hunting equipment with them and are reported to have had some successful shooting. The party spent the entire time with headquarters in the special car, utilizing it as their sleeping and eating quarters.

Death of A. E. Hoffman

At the time of the recent death of A. E. Hoffman of the Hoffman Brothers Company, Fort Weyne Ind. information was not available on which Hammwoon Broom could base story of Mr. Hoffman's life. Hammwoon Encome believes, however, that the trade will appreciate a short sketch of Mr. Hoffman's carer in the lumber business.

He was born in 1836 in the country near Newburg, N. Y. His parents, Mary and Nathan E. Hoffman, died when Mr. Hoffman was a boy, leaving him, three brothers and three sisters, all under age, to shift for themselves. The young tarrily moved to Frederick, Md., about 1856, where the boys earned a living in various ways. A. E. Hoffman shortly before the war left the rest of the family and went to Fairmount, then in Virginia. When the war broke out he enlisted in the Confederate army and served with distinction all through the war. At the close of the conflict the brothers and sisters were pretty well scattered, but A. E. Hoffman came to Indiana and was impressed with the possibilities of hardwood development. He succeeded in interesting two of his brothers, J. R. and W. H., and they started a mill in 1866 at Oswego, Ind. Two years later they moved to Fort Wayne, Ind., on account of the railroad which had come in there. Since then he and his brothers and those associated with him have always been identified with the lumber business. While they almost always had mills at different points in the country, the old mill at Fort Wayne has been in continuous operation and is still running. This mill is somewhat interesting as being the place where the three Hoffman brothers built their first experimental band mill, this being the first band mill in the United States to saw a carload of lumber. They manufactured band mills for fifteen or twenty years under their patents, but confined most of their attention to operating their own plants.

Mr. Hoffman was married in 1871 to Emma Freeman of Fort Wayne.
They had one daughter, who died in 1910. During the whole course
of his life Mr. Hoffman and the company with which he was identified
stood as models of interrity and honesty and he leaves vacant an honored
place in the hardwood industry of the country.

The business of the Hoffman Brothers Company will continue unaffected by his death, as the firm had been incorporated a number of years ago and the active management has been in the hands of younger members of the family.

Death of Sigmund Heineman

On November 26, in the Presbyterian Hospital in Chicago, occurred the death of Sigmund Heineman of Merrill, Wis., in his sixty-second year. He was born in Germany. He became a citizen of Lincoln county, Wis., in 1880, and engaged in the mercantile, banking, land and lumber business. He was a Mason, Elk, Odd Fellow and a member of the Jewish church.

Pertinent Information

Lumber Cut and Shipments

The National Lumber Manufacturers' Association has sent out a report showing the cut and shipments of lumber, by specified numbers of mills, for each month from November, 1912, to October, 1913, both inclusive. The showing is as follows:

NO. OF MILES		
Reporting.		Shipped.
November, 1912	1.068,300	1,091,800
December, 1912 692	806,100	919,400
January, 1913 705	934,100	1,019,200
February, 1913	932,100	994,800
March, 1913 774	1,154,800	1,212,800
April, 1913 807	1,243,900	1,165,500
May, 1913 721	1,368,300	1,230,000
June, 1913 705	1,269,900	1,077,500
July, 1913 683	1,205,700	1,088,600
August, 1913 694	1,222,600	1,154,100 $1.127,100$
September, 1913 758	1,237,600 1.182,800	1,162,800
October, 1913 726	1.152,800	1,102,800
Totals	13 626 200	13.242.600

Comparisons, month with month, by taking the same mills for the month in 1912 and in 1913, are shown below:

No. of	-Cut.	M Feet	Shipmeni	ts, M Feet.
Mills.	1912.	1913.	1912.	1913.
January 629	683,100	889,200	805,000	987,600
February 629	804,500	849,800	888,500	923,900
March 629	856,200	994,400	970,000	1,059,100
April 629	945,400	1,064,900	1,028,400	1,006,100
May 629	1.100,200	1,231,600	1,140,700	1,131,700
June GRG	1.118,600	1,117,100	1,073,700	990,600
July 556	1.084,400	1,085,100	1.192,700	978,000

September 598	1,072,300	1,069,400	1,037,400	980,400
October 593	1,139,100	1,051,400	1,072,300	1,042,400
Totals	9,944,500	10,460,300	10,299,900	10,144,800

New York Aldermen Still Oppose Wood Trim

The criding containts of the board of dilumen hold another baseling on the proposed new code on Decimber 3. The committee or rather its charges. Add at an Harter is making a strong effort to have a bayorable report on the code inversed and submitted to the whole located. To date only we signatures use after december, a sixth being required to make a majority.

At the last beatin, the wood term inteproof wood and the number into ests were present in recrease to recend the opposition to the new previous which probe at the use of wood trim in buildings. But tell and over high. The objections of the lumber interests have at two previous hearings been given in detail and as noted in these columns the stand of the metal trim men was shot to pieces. It was thought the wood frim case was so strong and so eloquently stated that the code would be changed in committee and the fact that no changes have been made and this latest attempt to get a majority report on the code is taken in some quarters as sustaining the charge that special interests are bein, tavored. The wood turn men do not charge this, but it has been pointed out that the metal trim business is practically a monopody in control of all patents, etc.

It is thought by many that the report on the code will go over to the non-confidence of the shocking of interest will be shown by the lumber and wood trim interests.

Building Operations for November

Building operations for November, as shown in the official statements of permits issued from 63 eithes received by The Interiera Continuous, Chicago, reach a total value of 838,066,523, compared with \$52,768,654 for November last year, a decrease of 28 per cent. This is the sharpest decline yet experienced in any one month this year, and no doubt represents to some extent the holding back of plans, especially since active construction work is not normally brisk during the next two or three months. A few cities, however, show improvement. Wichita comes to the front with a gain of 402 per cent. Wikes Barre scores 409 per cent on the right side. Peoria forges ahead to the extent of 95 per cent. St. Joseph takes credit for a 44 per cent advance, Hartford gains 297 per cent. Cedar Rapids 179, Dallas 175, Columbus 61 per cent, and Manchester 81 per cent.

For eleven months this year the building operations of these cities have a total of \$566,742,855, compared with \$644,102,203 for the corresponding period last year, a loss of 12 per cent. Comparisons in detail are as

Arkansas Flat Rate Adjusted

The controversy cy — the flat rats on rough material, which was occasioned by the one — : the Railroad Commission of Arkansas, which became effective on November 10, has been terminated to the satisfaction of both the shippers and the railroads.

The Arkansus Raifroad Commission, after hearing the arguments of both the shippers and carriers on November 29, decided to repeal its order in regard to the dat rate on rough material, and issue a new order in fleu thereof, fixing the rates agreeable to both parties. The former rate as fixed by the Commission provided for a charge on all forest products of two cents per hundred weight for the first twenty-five miles of the haul and increasing one quarter of a cent for each additional ten miles. The new rate, under the order issued on November 29, provides that rough forest products be carried for two cents for the first twenty-five miles with an increase of one half cent for each additional twenty-five miles thereafter. The order provides also that the shipper shall sign a contract to reship at least twenty per cent of the intake over the original carrier's line. No hond, however, may be exacted by the carrier to this effect, a sample contract being thought sufficient. Representatives of the railroads and numerous shippers were present at the meeting of the Commission.

Highest Court Upholds Kentucky Rates

The Supreme Court at Washington, D. C., on December 1, handed down an opinion denying the Louisville & Nashville Raifread Company an injunction against the rate-making powers of the Kentucky State Railway Commission. Justice Hughes read the opinion in which the entire court concurred, and by virtue of which interstate rates made by the Kentucky State Commission may be upset by railroads only when they are proved to be confiscatory.

Hemlock and Hardwood Cut and Shipment

R. S. Kellogz, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, reports that hemlock production in October was ten per cent less than in September and the hardwood cut fifteen per cent less than in the preceding month. Hemlock shipments in October practically equalled shipments in September, while hardwood shipments increased nine per cent over the previous month.

The summary of reports for the last twelve months shows that during this period hemlock shipments have exceeded the cut by three per cent and that hardwood production has been six per cent greater than shipments. The production of hemlock and hardwoods combined has exceeded shipments by one ner cent since November 1, 1912.

Reports from 72 firms give these totals for October:

	Sawed	Shipped
	Firms M. Ft.	Firms M. Ft.
Hemlock	48 44.291	63 38,994

In., with an authorized capital stock of \$25,000.

Dickey Campbell & Co. of Black Mountain, N. C., have sold out to

Perley & Crockett.

The Virginia Veneer Company has started business at Jarratt, Va.

The authorized capital stock of this concern is \$10.000.

The South Bend Casket and Hardware Company has been incorporated at South Bend. Ind., with a capital stock of \$5,000.

Articles of incorporation have been filed with the secretary of state at Little Rock, Ark., by which the Benton Cabinot Works of Benton, Ark., were incorporated with a capital of \$2,000. The directors are J. F. McEwen, N. D. Couch and M. E. Couch.

==< CHICAGO **>**=

The December calendar of the Lumbermon's Club of Chicago shows that there is listed a stag vaude ville for December 13 and an evening of dancing for December 17. Miss Ruth Stonehouse will again teach the new dances on the latter date.

Hymwood Recom acknowledges recept of a handsome calendar the first for the year 1911 which was sent by the Wood-Mosaic Company of New Albany, Ind.

HARDWOOD RECORD is also in recept of a booklet containing report of the paper on "Closer Utilization of Timber," as submitted by the committee on forest utilization at the recent conservation congress at

mittee on forest utilization at the recent conservation congress at Washington.

C. B. Allen, manager of the vener department of the Anderson Tully

Company, Memphis, has been spending several days on one of his peridical trips to the local market. W. B. Burke of the Lamb-Fish Lumber Company, Charleston, Miss.,

accompanied by Mrs. Burke, has been spending quite a little time in Chicago recently and on Sunday last left for Charleston after having been in the city for about two weeks.

As noted elsewhere in this issue, a meeting of the board of governors of the Gum Lumber Manufacturers' Association was held at the Chicago Lumbermen's Club on Saturday, December 6. Among those present were E. A. Lang, F. R. Gadd, S. M. Nickey, T. W. Fry, W. W. Dings, M. B. Cooper, H. B. Weiss, W. B. Burke, C. L. Harrison, John M. Pritchard, J. W. McClure, W. A. Glichrist. Most of these men have already left the city and returned to their respective homes.

E. D. Galloway and M. L. Pease of the Galloway-Pease Company, Poplar Bluff, Mo., and Saginaw, Mich., have been spending several days with the Chicago trade.

Geo. H. Chapman of the Northwestern Lumber Company, Stanley, Wis., spent several days of last week in Chicago.

F. J. Nichols of the Nichols & Cox Lumber Company, Grand Rapids, Mich., was in town on a selling trip several days of last week.

O. P. Hurd of Cairo, Ill., spent several days in Chicago last week in conference with his brother, J. S. Hurd.

J. C. Knox, secretary of the Michigan Hardwood Manufacturers' Association, stopped off in Chicago Monday of this week on his way back to Cadillac after having attended the logging conference at Green Bay.

The last issue of the Lumbermen's Club News, dated December, being volume 1, number 3, is a mighty entertaining sheet. It contains a raft of interesting stuff having to do with the business and personal affairs of members of the club.

The H. C. Heinemann Furniture Company has started business at Chicago with \$25,000 capital stock.

The United Sash and Door Company has started business in Chicago with a capital stock of \$5,000.

Haughton & Gillespie of Chicago have changed the firm name to the Haughton Veneer Company.

The Binder Frame Manufacturing Company of Chicago has been organized with an authorized capital stock of \$10,000.

The Windsor Folding Bed Company of Chicago has changed its name to the Windsor Furniture Company.

The Schwartz Picture Frame Company has been incorporated at Chicago with \$5,000 capital.

It is learned that J. T. Phillips of the Diamond Lumber Company, Green Bay, Wis., is now convalescing after a severe attack of typhoid fever. Mr. Phillips is away for a two weeks' rest with his brother.

Max L. Pease, Poplar Bluff, Mo., vice-president of the Galloway-Pease Company, whose headquarters are at Saginaw, Mich., was in Chicago December 2.

Nels Dueholm, sales manager for the Scott & Howe Lumber Company, Oshkosh, Wis., was a welcome caller at HARDWOOD RECORD office Decem-

J. S. Stearns, president of the Stearns Salt & Lumber Company, Ludington, Mich., was among the visitors to the local trade Demember 9.

---< NEW YORK **>**=

Wm. H. Russe of Memphis, Tenn., prominent hardwood lumber operator and ex-president of the National Hardwood Lumber Association, was a visitor to New York during the fortnight. In company with Mrs. Russe he was on a shopping tour.

J. C. Kaul of the Kaul Lumber Company, hardwood manufacturers of Birmingham, Ala., was a New York visitor recently.

The South American Hard Woods Company has been incorporated in New York by Geo. H. Hill, Medellin, Colombia, South America; F. O. Altinger and E. H. Vines of New York. The company will deal in imported hard and fancy woods, and control vast tracts of timber in South America.

F. C. Price, for many years identified with the tropical hardwood business in this city, has been appointed representative here of the Grand Rapids Veneer Works. He is located at 17 West Forty-second street.

The Magara Wood Working Company, office this city and plant at Middleport, N. Y.. has filed a petition in bankruptcy; liabilities \$52,600, assets \$67,200.

The Lockhart Piano Company has filed a petition in bankruptcy; llabilities \$29,700, assets \$14,400.

R. J. Darnell, Memphis lumberman, was awarded \$11,000 damages in

sult against the Long Island Railroad Company and his daughter, Miss Pauline Darnell, \$10,000. The sult was brought following an accident in October, 1911, when a Long Island train ran down an automobile, killing Mrs. Darnell and another daughter and injuring Miss Pauline Darnell.

──≺ BUFFALO ≻

An order has been issued by Judge Hazel in Federal Court directing Roland Grangle, receiver of the Blue Grass Lumber Company, to show cause why money collected on certain accounts should not be turned over to the Manufacturers' Finance Company of Baltimore. That concern makes claim to certain assets of the lumber company under an assignment for loans. The affairs of the Blue Grass Lumber Company and the associate Empire State Hardwood Lumber Company are in a tangled condition on account of the loss of part of the books. One Buffalo bank is a creditor to the extent of \$42,000.

The Jamestown Panel & Veneer Company sustained a loss of several thousand dollars by fire, as well as water on November 30. The heat set of about twenty-five sprinklers and the veneer plant as well as two floors of the Nelson Company, manufacturers of dining-room tables, was flooded. The fire was caused either by spontaneous combustion or defective wiring.

WELLS, MICHIGAN

The City Lumber Company, 1154 Senera street, has started into the general lumber business, both wholesale and retail. A stock of hardwoods and onk flooring will be carried. Manager Charles H. Shepard states that a pretty good local trade in lumber has been developed since the start several weeks ago. The yard adjoins that of the National Lumber Company.

T. Sullivan & Co. report a good demand for brown ash as crating lumber. The yard has been receiving good supplies of hardwoods lately and the available piling space is well taken up.

Frank T. Sullivan, manager of the yard of H. H. Salmon & Co., has

lately been at Harbs, Boach, near Port Huron, to look after the company's barge Pendell, worch, went ashore there. The Batavia door mill in which the Scatcherds are interested is filling

The Batavia door full in which the Scatcherds are interested is filing a large rush order for inahogany and other hardwoods for the interior work of the new Lord & Taylor building in New York.

B. F. Ridley of Davenport & Ridley, has been spending considerable time in the South lately, looking after hardwood stocks which are being shipped to the Buffalo yard.

Blakeslee, Perrin & Darling report the hardwood trade as fair and better than it was two months ago. Plain oak and poplar are among the woods selling fairly well.

R. D. McLean has returned from a week's business trip to Canada. The office reports the hardwood trade fair, but sales are not expected to be at all active until after inventory taking among buyers.

Homer T. Kerr reports that the sawmill at St. Mary's, Pa., with which he is connected has shut down for the present in order to put all the activities into cutting logs, preparatory to starting up about February.

-----≺ PHILADELPHIA ≻-

Frank R. Whiting, president of the Whiting Lumber Company, reports a varying activity. Buying is only from hand to mouth. He looks for comparative quiet until after stock-taking. The hardwood situation he pronounces well controlled. There will be a scramble for stock, he thinks, with the first advance in buying.

The Croft Lumber Company of Alexander, Va., announced recently that J. Gibson McIlvain, of J. Gibson McIlvain & Co., Philadelphia, had been elected president of the company to succeed J. H. Henderson, who with his brother, Milton J. Henderson, has formed a wholesale lumber firm which will occupy the old Croft quarters in Clarksburg, W. Va. The Croft concern has moved its sales office, which will be under the direct supervision of J. W. Sullivan, general manager of the mill, to Alexander.

Eugene W. Fry, lumberman, and president of the Philadelphia Lumbermen's Golf Club, has been recently appointed a delegate by Governor Tener, to represent Pennsylvania at the National Rivers and Harbors Congress. Mr. Fry was also elected a vice president of the Atlantic Depener Waterways Association, at their recent convention in Jacksonville.

Horace A. Reeves, Jr., says he is getting a few orders right along, and last months' sales totaled up fairly well. Sharper hustling is necessary now, he says, and there is nothing on the surface at this time to determine the outlook.

J. U. Holloway of the Imperial Lumber Company says business is spotty and hard to get. As to outlook they simply are hopeful.

It is announced that A. B. Adams of the Brown-Bates Company will look after sales in the mining region hereafter.

F. A. Dudley of the Sterling Lumber Company confirms the general trade report of a strained activity. There is nothing new from a fortnight ago, and no improvement looked for until after January 1.

Nathan B. Gaskill of Nathan B. Gaskill and Sons, Inc., in regard to the lumber situation, says we are simply marking time, waiting patiently for a sign to go ahead.

W. H. Fritz of W. H. Fritz & Co. says there has been very little change if any in trading for the last two weeks and that none is anticlpated before the end of winter.

The Federal Clay, Coal and Lumber Company, Wilmington, Del., obtained a charter under Delaware laws November 22, capitalized at \$200,000.

───≺ PITTSBURGH ≻─

The Marquette-Kerr Lumber Company, capital \$25,000, has been organized at Youngstown, O., by H. L. Marquette, Willis E. Kerr, Carry Kerr, Grace D. Williams, and Elizabeth Marquette.

The Henderson Brothers Lumber Company is a new concern with offices in the Empire building at Clarksburg, W. Va., which is of much interest to Pittsburgh wholesalers. The president is J. H. Henderson, for many years with the Kendall Lumber Company of this city, and lately president of the Croft Lumber Company of Clarksburg.

William Schuette & Co. report a fair volume of business. Yard buying is, of course, pretty slow at present.

The C. P. Caughey Lumber Company is cutting a large amount of mine stock and railroad ties from its hardwood timber tract in Centre county, Pennsylvania. Manager S. A. Seaman of this company, announces that business in both these lines is good.

J. M. Bemis & Son, of the old lumber firm of Bemis & Vosburg, have sold their big timber holdings in Texas and other western states for about \$1,000,000. They were bought by Mr. Bemis fifty years ago for \$10,000.

The Aberdeen Lumber Company has established a cypress department which is bound to be a winner. President J. N. Woollett has secured for manager of this department Fred J. Davenport, formerly of the Cypress Selling Association of New Orleans. President Woollett is in the South this week on business.

The Kendall Lumber Company has made a change in its Philadelphia office putting Otto C. Cluss in charge in the Real Estate Trust building in that city. At its branch office at Columbus, O., Wade Heimrich is now manager.

W. D. Johnston, president of the American Lumber & Manufacturing

Company, returned home this week from a three weeks' trip to the Pacific coast. The American reports an excellent business in hardwoods.

The J. C. Donges Lumber Company of which J. C. Donges has been

the active head for several years, will shortly incorporate under a Penncylvania charter. His associates will be L. R. Martin, R. T. Rossell and

The first annual banquet of the Pittsburgh Lumbermen's Club was held at the German Club House on Craft avenue on the evening of December 3. Dancing, a fine banquet, and a splendid moving picture show entertained the 250 retailers and their wives who were present. The club is a very active organization and its officers are: President, E. M. Diebold : vicepresident, W. H. Williams; treasurer, Walter Ahlers; secretary, E. A. Diehold.

----≺ BOSTON >-

The Colonial Lumber Company, Boston, has taken an office on Milk street. The company was incorporated here a few weeks ago.

The plant of the White Mountain Freezer Company, Nashua, N. H., has been damaged by fire. The blaze was confined to the company's large dry house, which at the time of the fire was well stocked with lumber. The building damaged was erected about a year ago and was credited with being one of the most modern dry houses in that section.

Abraham Recht, a large builder in Lynn, Mass., has filed a petition

in bankruptcy. The liabilities are given as \$67,615 and the assets are estimated at \$53,775.

C. L. Barr of Philadelphia, Pa., has been a recent visitor in the Boston

=≺ BALTIMORE **>**=

Among the visiting lumbermen here the latter part of November was W. L. McCormick, who came in the interest of some of the large manufacturing interests in Washington state on a kind of inspection tour in order to study the advantages offered by the various Atlantic ports. with a view to selecting one that might be made the central point for shipments of Pacific coast lumber when the Panama canal is opened. The plan would be to concentrate all of the shipments east at one point. and from there distribute the lumber over the interior and along the seaboard. Mr. McCormick expressed himself as being very favorably impressed with Baltimore because of this city's location midway between north and south, and in an admirable position for reaching every part of the territory.

Among the creditors of the Peabody Building Company and its president, James T. Miller, who were adjudged bankrupt in the United States court here November 25, were a number of lumber firms, with amounts running as high as \$3,000 and \$4,000. The company has been carrying on construction work in the northern part of the city and has found property moving slowly of late.

A. O. Thayer, mill manager for the Magazine Hardwood Sawmill Company, near Mobile, Ala., which is owned by Richard P. Baer & Co., of Baltimore, is here on a vacation and will spend several weeks in the Monumental city. Mr. Thayer expressed the belief that the hardwood

situation had presented a fairly favorable aspect.

Another visiting lumberman was George D. Burgess of Russe & Burgess, Inc., Memphis. Mr. Burgess came to Baltimore to attend the funeral of his father-in-law, J. D. Early, who was for years cashier of the Commercial and Farmers' National Bank here, but retired in 1895. Mr. Burgess gave an encouraging view of the lumber trade in the Memphis He said that while there had been an easing off in some of section. the woods, the first drop was generally the most pronounced, and that indications gave rise to the belief that a rebound might occur before long.

=≺ COLUMBUS **>**=

The Contractors' Association of Portsmouth, O., has been incorporated for the purpose of promoting the interests of contractors and building material men in that city. The corporation is not for profit, thus no capital stock is provided for. The incorporators are A. J. Reitz, Otho D. Foster, William Creelbaum, William J. Tritscheller and Henry H. Kans.

J. P. Madigan of Cleveland is one of the incorporators of the Perry Coal and Lumber Company of Lexington, Ky., which has a capital of \$1,500,000. The company will develop mines and oil lands and manufacture lumber. M. J. Berry of Columbus is also interested in the company.

The Niles Auto & Machine Company has leased the building formerly occupied by the Sykes Lath and Roofing Company at Niles, O.

The Economy Lumber Company of Marion, O., has been incorporated with a capital stock of \$10,000 to buy and sell and deal in lumber. The incorporators are J W. Jacoby, A. L. Payne, Pride Tossey, S. H. Delong and D. F. Maples.

The Kirkpatrick Lumber Company of Cincinnati, O., has started in the wholesale business.

At Logan, O., there is a dearth of houses and efforts are being made to supply the demand. The scarcity is caused by the large number of employes which came into the city recently. A number of new manufacturing concerns opened there.

The annual meeting of the Union Association of Lumber, Sash and Door Salesmen will be held at Cincinnati February 3, 4 and 5 in con-

Walnut for Export

Thirty years' experience in the handling of walnut logs for export enables me to turnish guaranteed prime quality stock.

I am constantly in close personal touch with the source of supply of export walnut logs and know exactly what I am getting at all times. In fact, a number of the best foreign houses are taking up my logs on my own recommendation

My supply enables me to fill orders of any size in carload lots without delay.

Highly Figured Walnut

As a result of close personal supervision of log purchases my stock of highly figured wal-nut in long wood and stumps contains only the choicest in figure and curl that can be found

All this stock is carefully selected to take care of a discriminating demand.

My figured stumps are all dressed closely and when shipped are practically in shape for the knife

Youwill lose nothing by trying me on your next inquiry.

nection with the annual convention of the Ohio Retail Lumber Dealers' Association. J. S. H., award is president of the organization. In the month of Nov mber was recorded the greatest volume of business

In the month of Nov older was recorded the greatest volume of business for any November sinc the city building department was opened. The excess of November, 1913, over November, 1912, was \$150,783. The total value of permits granted this month by the department was \$398,770. The business of the department for the first eleven months of this year over that of a similar period in 1912 has increased by \$558,020. The total to becember 1 has been \$5,075,850. The number of 1913 building permits so far has been \$7,49, compared to 2,534 issued in a similar length of time last year.

The Dwight Hinckley Lumber Company of Cincinnati has announced that Harry W. Fagin, formerly of Fagin & Kirkpatrick, has become a stockholder in that company and at a recent meeting of the board of directors was elected vice-president.

The next two or three months will see the beginning of the largest building operations Columbus has been fortunate enough to witness for many years past. The prospects for building in Columbus in 1914 and 1915 are better than they have been for years, considering the value of the buildings and the improvement thereby to the city. The architects are just beginning the plans for these buildings in some instances and in others the drawings are nearing completion. But that these great improvements are to be made is certain, the aggregate cost of the seven buildings being about \$3,000,000.

F. H. Herdman of the F. H. Herdman Lumber Company of Zanesville, O., died recently after a short illness.

L. B. Schneider of John R. Gobey & Co. says that conditions in the hardwood trade are remaining about the same. Prices are firm and shipments are coming out better.

Secretary Benbow of the Sowers-Leach Lumber Company says trade is rather quiet although prices are holding up well.

Manager Hodil of the Virginia Lumber Company says that the hardwood trade is holding up well and prices are firm.

R. W. Horton of the W. M. Ritter Lumber Company reports a little slowness in the past week due to the intervention of the Thanksgiving holiday. He says the factories are still the best buyers although yards are buying a little. The car supply appears to be spotty; some places are being well provided while others have a scarcity.

J. A. Ford of the Imperial Lumber Company says the weather has been against an active movement in hardwoods. Prices are just about the same and the demand is fair. There is an improvement in the car supply. George P. Morgan of the Mercereau Lumber Company of Parkersburg,

George P. Morgan of the Mercereau Lumber Company of Parkersburg, W. Va., and E. M. Bonner of the Diamond Lumber Company of the same city were in Columbus recently on business.

=< TOLEDO **>**===

President W. S. Booth of the Booth Column Company has just returned from a trip to West Virginia where he purchased 500,000 feet of poplar and a car of oak lumber. Mr. Booth states that business has been splendid with his concern this year, which far exceeded the business of last season. Next week this concern will begin operating its plant but eight hours a day which will be continued until the first of January when the annual inventory will be taken. Following this the plant will again run full time.

The Toledo Bending Company reports business a trifle dull just now, orders coming in more slowly. As this is the "off time" for this class of business it leaves conditions about normal.

The Skinner Bending Company reports a fair business, orders beginning to come in more slowly, however, both in the bending and wheelbarrow departments. While prices have a tendency toward depression, this is believed to indicate only a slow demand and a desire on the part of a good many concerns to unload what stock they have on hand, in an effort to turn their wares into ready money.

Blood poison resulting from the infection of a small boil behind one of his ears caused the death during the last week of Howard M. Smith, prominent Toledo lumberman, well known to the trade throughout this section. Mr. Smith's father operated the first sawmill ever located in Toledo in the early days when this section was rich in fine hardwoods. These sawmills finally developed into the pioneer lumber yard of Toledo under the title of the W. H. H. Smith Company. During the past three years Mr. Smith has been conducting an office business in Toledo. He leaves a wife, three daughters, a son and a brother.

—≺ INDIANAPOLIS >----

The Clinton City Lumber Company of Clinton has increased its capital from \$20,000 to \$50,000.

Building operations in the city last month aggregated \$479,711 as compared with \$700,085 for November, 1912, the decrease being due largely to labor difficulties.

The McDonald Lumber Company has been organized at Clinton by Eugene McDonald, M. M. Scott and Austin Jackson and has been incorporated with an authorized capitalization of \$20,000.

John Hughes, who was identified with the hardwood trade in northern Indiana for many years, died at the home of his daughter in Fort Wayne

a few days ago. He was sixty five v are old and retired from business recently after having been in the lumber trade at Huntington.

Judge Albert B. Anderson of the United States court in this city haappointed Edward C. Disself receiver for the Hanna-Brackenridge Company of Fort Wayne on a petition alled by several creditors asking that the company be adjudged bankrupt.

Members of eighteen building trades' organizations have walked out on all building projects where any brick work is under way. The trouble is a jurisdictional strike caused by a determination to prevent brick layers from doing inside marble work. The brick layers are not members of the American Federation of Labor with which the marble setters and other building trades are identified.

Since December I a large number of teamsters and chauffeurs in the city have been on strike demanding a uniform wage scale and shorter and uniform hours. All hauling was suspended two days because of acts of violence that met efforts to operate tracks. The excellent protection being afforded by the police, however, has encouraged many concerns to resume deliveries. The police are proceeding on the theory that law and order must be maintained and have very promptly responded to all complaints, dispersing mobs as fast as they have formed. Normal conditions are rapidly returning and it is thought that within a few days there will be little danger of trucks and drivers being molested. Threats are being made that a general strike of all labor organizations will be called.

==-< MEMPHIS **>**=

The Chickasaw Cooperage Company has recently purchased a mill which will be installed at McGehee, Ark. This firm is engaged in the manufacture of heading and staves and tight barrels. It has extensive holdings in the territory tributary to McGehee and the new mill will be installed for the development of these. On the strength of this launching into the sawmill end of the business Walker L. Wellford, secretary and treasurer of the company, has made application for membership in the Lumbermen's Club of Memphis.

A large delegation is in Washington urging federal control of the levees through the adoption of the Ransdell-Humphreys bill which is now pending before congress. There is no section of the country more directly interested in this proposed legislation than the Memphis territory. The floods of the past several years have brought disaster throughout the upper Mississiply valley and owners of lumber and wood working enterprises throughout the territory tributary to Memphis have suffered heavy loss as a result of the breaks in the levee system. Every business organization in this city and section, including the Lumbermen's Club of Memphis, sent delegates to the Washington conference. The belief is very strong here that it is impossible to control the floods through the state and private levee boards and that the United States government is the only power having sufficient capital at its disposal to cope with a situation of such vast import.

The Moro Land & Timber Company has made application to do business under the laws of Arkansas. Its headquarters are at Moro, Ark. The certificate sets forth that the company proposes to invest \$20.000 in Arkansas and that one of its chief expenditures will be involved in the effection of a sawnill at Bono Craighead County.

R. J. Darnell, Inc., has failed to secure an injunction from the supreme court of Mississippl restraining the railroad commission from putting into effect a new log rate on the Batesville-Southwestern which this firm has leased from the Illinois Central railroad for the development of its timber resources in that section. The lumber firm set forth that the new rate was practically confiscatory and, therefore, in violation of the constitution of the United States. The supreme court, however, has suggested the wisdom of testing the new rates by actual experience and, from the decision, it is apparent that the complainant will have to submit to this verdict at least for the time being.

——≺ NASHVILLE ≻—

The Nashville Veneer Company has been incorporated with an authorized capital stock of \$15.000. A. B. Ransom of John B. Ransom & Co. has been elected president, and Wm. R. Drinkard of Indianapolis is general manager of the new company. The company has taken steps to start up a plant in West Nashville immediately, and is now operating two saws. It is expected that the business will be enlarged greatly at a later date.

The Hudson Lumber Company at South Pittsburg, Tenn. has been carrying on heavy operations in red cedar lumber and timber. The company has recently closed contracts for about 1,000 carloads of red cedar in Rutherford, Bedford, Coffee and other counties, to be delivered at once. The receipt of these shipments will give the company about 3,000 carloads of red cedar on its yards, valued at more than \$100,000. This lumber is being converted into material for the Eagle Penell Company, and is said to be as fine quality as can be secured at this time. The company employs about 150 men in its plant. It is now making arrangements to secure electric power from Hales Bar on the Tennessee river. The development of the water power of Tennessee at the cost of many millions of dollars and introduction of hydro-electric power promises to do much in the matter of power for manufacturing plants.

The Moore Lumber Company of Greeneville, Tenn., has filed a voluntary petition in bankruptcy.

J. G. Collier has added a sawmill to his stave factory plant at Erin,

The Mossman Lumber Co., Inc. Manulaciusce nlain and quartered red and white oak ash gun and postar, a a a a ALASTO DULLA SOLUES DUNIENISION BLANT

Tenn, and will also distribution to the general lumber trade.

The Greeneville Chair Company, Greeneville, Tenn., which has been in the hands of a receiver for some time, has been sold by order of the court to Mr. Lutz of Lenoir, N. C., for \$35,000. This will pay about twentyfive cents on the dollar to creditors. The company operated a large plant, and Mr. Lutz, who has had experience in the business, announces his intention of reorganizing the company and resuming business at an early date. The plant employed about 400 men.

Nashville commercial bodies have started a movement to consolidate. Officers and directors of more than a dozen associations met December 4 and endorsed the plan. E. M. Foster, president of the Board of Trade, presided, and E. S. Shannon was secretary. Many prominent men spoke in favor of the movement, including Chas. M. Morford, president, and Hamilton Love, former president of the Commercial Club. It is probable that the Nashville Association of Commerce will be formed, with a membership of 3,000 or 4,000, similar to the plan now in vogue in Chicago. The Lumbermen's Club and other associations will be subordinate departments and will have their officers and organizations. The Board of Trade, Commercial Club and Business Men's Association will probably be absorbed. It has been recognized for several years that greater work could be accomplished for the city by united effort. The presidents of the various organizations were appointed a committee to perfect plans for consolidation.

The Cumberland River Improvement Association held its annual meeting and re-elected W. E. Myer, Carthage, Tenn., president, and E. S. Shannon, Nashville, secretary. The association is composed of men promoting the work of improving the Cumberland, and the outlook was reported bright to secure the completion of the project so as to give navigable water all the year round from Nashville to the Ohio river and also for several hundred miles above Nashville. It is believed the completion of this work will be a greater advantage to the city in the matter of securing transportation rates than a new trunk line railroad.

=< LOUISVILLE >=

Recent forest fires in castern Kentucky have caused so much damage, in spite of the fact that they were vigorously fought by the county fire wardens appointed by the state forestry department, that J. E. Barton, state forester, has written to all of the railroads in the state calling their attention to the law requiring them to use spark arresters and pointing out their liability for damages in case they cause the destruction of timber

The Louisville Hardwood Club is preparing for an active season's work. Important topics to be discussed in the state legislature, which starts its bi-ennial session at Frankfort next month, will be taken up before then by the club. The questions to be considered are reform of the state tax system, adoption of a workmen's compensation law and the extension of the powers of the state railroad commission. President S. R. Cecil has appointed the following committees:

PUBLICITY AND PROGRAM—Edward L. Davis, G. D. Crain, Jr., and Stuart R. Cecil.

tuart R. Cecil.

ENTERTAINMENT—T. M. Brown, D. E. Kline and John Churchill.

FINANCE—C. M. Sears, T. M. Brown and A. E. Norman.

By-Laws—D. E. Kline, C. J. Frank and August Kabler.

MEMBERSHIP—P. G. Booker, R. F. Smith and Smith Milton.

TRANSPORTATION—A. E. Norman, Herbert Bauman and Edwin Norman.

LOGS—H. E. Kline, Edward S. Shippen and Charles Platter.

Rapid progress is being made in completing the new plants of the Wood Mosaic Company, which is rebuilding a sawmill at Highland Park, a Louisville suburb, and a veneer mill, sawmill and flooring plant in New Albany, Ind. The local mill will have a capacity of 35,000 feet a day, while that in New Albany will cut 20,000 feet a day. The vencer saws will turn out 25,000 feet a day and the flooring factory 40,000 feet a day.

The complaint of the North Vernon Lumber Company, which has a sawmill in Louisville, was heard here last week by a representative of the Interstate Commerce Commission. The complaint was that the rate from Dyersburg. Tenn., where the company has a mill, to North Vernon, Ind., where the headquarters of the company are located, is greater than from Dyersburg to Cincinnati, though the haul is much The Illinois Central and the Baltimore & Ohio are the defendants in the complaint.

Hines & Norman, a Louisville legal firm which has handled a number of lumber traffic cases, appeared in the complaint of the Commercial Club of Metropolis, Ill., against the Illinois Central and other roads before the Interstate Commerce Commission recently. The chief question involved is rates on lumber from the South to Metropolis.

The Broadhead-Garrett Lumber Company of Winchester, Ky., has purchased a tract of timberland in Perry county, and will erect a large mill on the property, which is only a short distance from Hazard, on the Lexington & Eastern.

=≺ ST. LOUIS >===

During the month of November the receipts of lumber at this center were 14,432 cars. In November last year the receipts were 13,980, or a gain during November this year of 451 cars. Receipts by river this year were 28,000 feet. Last November they were 43,000 feet, a falling off this year of 15,000 feet. Shipments of lumber by rail in November this year were 11,730 cars, against 9,203 cars last November, a gain this year of 2,527 cars. River shipments for November this year have not yet been compiled.

Chicago, Ill.

M. L. Pease, are rescheded the Galloway Pease Company of Peplar Bluff, was a visitor at the Lumbermen's Exchange a few days ago.

W. P. Anderson, vice-president of the Gideon-Anderson Lumber & Mercantille Company, is back from his hunting trip to northern Michigan. He was one of a party of some twelve or fourtien which killed quite a lot of game and deer and had a good time generally. Mr. Anderson says he never had a better time in his life and it has done him a world of good.

G. E. Breece, president and general manager of the West Virginia Timber Company, Charleston, W. Va., was in St. Louis for one day last week and called at the headquables of Hyanwood Ricone. He came up from the mills of the company in the South. He visited in town, the mills in Arkansas City, Mouroe, La., and Baskin, La. He says they are all doing a splendid business but have been handicapped somewhat by the scarcity of cars.

W. W. Dings of the Garetson-Greason Lumber Company is back from a short trip to the Pacific coast, where he went on business. He visited Los Angeles. Sacramento. San Francisco and stopped at El Paso, on his way home, and while he stepped over into Old Mexico for an hour or two, he did not tarry long.

Harry Graus, a box manufacturer, will receive \$135,000 by the terms of a settlement made in litigation between Mr. Gaus and thirty-five insurance companies. The terms were announced a few days ago, in the St. Louis Circuit Court.

Mr. Gaus recently obtained a verdict for \$60,000 in a sult for damages be brought against the chief of the St. Louis Fire Prevention Bureau and the thirty-five insurance companies for false arrest. He sued for \$500,000, allering he had been arrested at the institution of the defendants who investigated a line which destroyed the box manufacturing plant of Henry Gaus & Son several months ago. Mr. Gaus also sued the companies for insurance on the burned plant and verdicts for \$102,000 had been returned in his favor. All the litigation has been appealed.

John H. Johanning, president of the Johanning Lumber Company, died last week of arterio sclerosis. He had not been actively engaged in business since 1910, partly due to the illness which caused his death. Mr. Johanning, who was seventy-six years old, had been a resident of St. Louis since 1847, coming from Germany when ten years old. He was educated in private schools in St. Louis and became a clerk in a planing mill in 1857. Later he became a partner in the business and the firm was known as Philibert & Johanning Manufacturing Company. He established the present firm in 1887.

The strike of the coopers at Paragould, Ark., is still on, with no indications of either side weakening or showing any disposition to compromise the differences. Some time ago the strikers proposed to arbitrate all questions of difference, but this proposal was refused by the mill owners, and now the strikers are refusing to submit the proposition to arbitration, and are also making an additional demand for increased wages. The mills show no disposition to change their former attitude in regard to the situation.

Contracts have already been awarded by the forestry office at Harrison. Ark., for the sale of two large tracts of white oak timber in the Ozark National Forest. The contracts cover 1,100,000 feet standing in Baxter county, Ark., at a price of \$3.80 per thousand feet, or a total value of \$4,180.00; also 1,600,000 feet in Cleburn county at \$3.75 per thousand feet, or a total value of \$6,000.00. By these two sales about \$1,000.00 will be added to the good roads fund of the Ozark National Forest, most of which will be available for expenditure during the next fiscal year.

A certificate of dissolution was filed in the office of the Secretary of State of Arkansas, on November 23, by the Clarendon Boat Oar Company of Clarendon, Ark.

Articles of Incorporation were filed in the office of the Secretary of the of Arkansas, on November 21, by the McDonough-Thoits Company of Hot Springs. The company is capitalized at \$20,000, and will do a general manufacturing and stave business. The incorporators are William McDonough, A. T. Thoits and Tom Thoits.

It has been announced that the Bentonville Cooperage Company has purchased the Keller Wagon Factory property at Joplin, Mo., including nine acres of land. The purchase price was \$10,000. The cooperage company proposes to move a part of its factory from Bentonville, Ark., to Joplin, Mo., about April 1, 1914. It proposes to continue the manufacture of slack barrels at Bentonville, but the tight barrels will be manufactured at Joplin, where enlarged facilities and additional machinery will be installed.

The final step in a case of long standing was taken on November 23, at Fort Smith, when the United States District Judge Frank A. Youmans, granted the application of W. W. Keys of Eureka Springs to sell the Fayetteville Wagon Wood and Lumber Company of Fayetteville, Ark., for which Mr. Keys is trustee. This company went into the hands of a receiver several years ago. It was capitalized at \$40,000. At the making of this order the attorneys for the New Hawley Company of Omaha, Neb., holders of \$40,000 worth of the company's bonds, opposed its being made, but were overruled by the court. The Hawley Company recently lost a suit in which they sought to have these bonds declared preferred claims against the bankrupt estate.

eastle, Ind., have been add with the Secretary of State. The company will operate a binact and at Hope, Ark. The Arkansas Long (men's Club held its annual meeting at the Marion

Hotel in Little Rock on December 9.

The pregram was prepared by President J. F. McIntyre of Pine Bluff, and Secretary W. J. Gossman of Forrest City. The Lumbermen's Club has grown at a steady rate throughout the year and now has a very creditable membership. This club originally was composed very largely of lardwood lumbermen, but the yellow pine men have during the past few months become enthusiastic over the idea and are placing their memberships with the club. At a recent meeting of the club, which was neid in Pine Bluff, many of the yellow pine manufacturers sent in their applications for member hip. J. F. McIntyre of J. F. McIntyre and Sons, hardwood mill operators at Pine Bluff, was re-elected president of the originization.

A report from Washington, D. C., dated November 22, states that the Interstate Commerce Commission has ordered a cancellation of the proposed increase in rates on lumber from points on connecting lines of the Santa Fe Railroad in Texas, Louisiana and Arkansas to Santa Fe destinations in northern Missouri, extreme western Kansas and northern Oklahoma mean the ground that they are not justified.

—≺ WISCONSIN ≻

The Kneeland McLurg Lumber Company of Phillips is having a new electric lighting system installed in its big sawmill so that sawing operations can be carried on throughout the night. This will double the capacity and provide employment for 200 additional men.

The John Schroeder Lumber Company of Milwaukee has finished its cut for the season at the big sawmill at Ashland. The cut this year has been up to the average, operations having been carried on throughout the summer. The mill is closed now on account of ice in the log pond but will be opened early in spring.

William Marik of Sturgeon Bay has purchased a large site, 400 by 100 feet, on the south end of the island mill property and formerly occupied by the Pankratz Lumber Company. The office building will be converted into a factory which is being equipped to manufacture woodenware articles and furniture. The site has water frontage and side track facilities. An addition is contemplated shortly,

The Ellison Lumber Company has closed its sawmill at Hawkins after a ten months' cut and will resume operations about January 1, by which time it is expected to have enough logs at the mill to start up. 'This concern will operate two camps this winter and is planning to put in about the same amount of timber as last season.

The Bell Lumber Company of Minneapolis, Minn., has established a resident agent at Phillips. M. J. Bell of that concern has closed a deal with the Kneeland-McLurg Lumber Company of Phillips for its cedar cut. He will buy cedar from other loggers also.

The Gagen Lumber & Cedar Company of Gagen has filed articles of incorporation with the secretary of state at Madison. The capital stock is placed at \$125,000, and the incorporators are F. H. Pichi, S. S. Miller and H. L. Reeve.

The Holt Lumber Company of Oconto is constructing a railroad near Townsend. The line runs east from that city into the company's large timber holdings and will provide connections with the market.

The hub plant of Andrew Kaul of Merrill has resumed operations after a short shut down. According to present indications the plant will have a stendy run from now until next fail.

Construction work has been started on the new plant of the Eureka Cooperage Company, at Menasha. This concern has been running in the glass factory but now requires a new factory. The new plant is located near the Milwaukee road's right-of-way on Depere street.

The Tomahawk Veneer & Box Company of Tomahawk, which was recently organized by Max Meyer and others as noted in a recent issue, will soon begin operations. The planing mill of the Tomahawk Lumber Company was turned over to the new company on October 31, when it ceased operations. New machinery has been purchased and is now being installed, the planing mill building has been fully enclosed, dry kilns for veneer have been built, new side tracks laid and hot water tanks installed. W. H. McDermott. treasurer of the company, is closing additional contracts for logs for the factory.

The plant of the Phoenix Manufacturing Company of Eau Claire is busy on a large number of machinery contracts, most of which are for use in the lumbering industry. The Namekagon Lumber Company of Namekagon, Wis., will soon have its new carriage and trimmer and other machinery completed to start operations at least early in spring. A heavy single band sawmill is being manufactured for W. W. Peck of North Troy, Vt., and another will be sent to Newburn, N. C. Two log haulers and five gasoline tractors are in the course of construction. The Conradson semi-automatic lathe will soon be ready to be put on the market.

To meet the rapid increase in the demand for their product. Blum Brothers of Marshfield, will increase their facilities to manufacture cheese boxes. The improvements will consist of a second story to the present building, doubling the floor space, which will be used for putting the boxes together.

At a recent meeting of the department heads of the United Refrigerator and Ice Machine Company of Kenosha, details of plans for handling the company's rapidly increasing business were discussed. The Viking Re-

frigerator Company of Kanses City was coently taken over by this concern. A recent order came from a local vision Moscow, Russia.

Harry E. Friend, president of the Philip Goerres Cooperage Company of Milwaukee, was taken to the lines, not hospital becoming unions news on the street. We from disast walking down Grand avenue when he suddenly sank to the ground unconscious, his head striking volently the cement sidewalk. Doctors at the hospital could not determine what had caused the attack, but believe it was a fainting spell. Mr. Friend sustained a slight concussion of the brain. He is forty have wears of any

H. L. Gardner, manager of the Rice Lake plant of the Marinette-Green Ray Manufacturing Company, was accidentally shot while hunting with a party of triends near Ashland. He was just stepping into the campwhen a stray shot struck him, penetrating his abdomen. He was immediately taken to Ashland but efforts to save his life were without success. Mr. Gardner was forty cight years of age and is survived by his wife and three children.

Plans are materializing for the construction of an interurban railroad in Door county with a terminal at Sturzeon Bay. The proposed line will be run to Liberty Grove and eventually to Green Bay. It is planned to construct tracks of standard type so that steam railroad cars can be switched onto the line and carried to points along the new route. The cars will be electrically driven, but the overhead trolley system will be displaced by gas motor generators individual for each train. The fact that the line will be connected with the steam roads is of interest to the lumbering industry of northeast Wisconsin.

R. F. LeMire will erect a planing taill at Federal Dam. Wis.

T. A. Brenner is planning to open up the Langill sawmill at Eagle river about the first of the year.

The director of the Forest Products Laboratory, Madison, has called for Mids on the machinery and equipment now installed at the Forest Laboratory at Wausau, Wis. A motor generator set, 500 h. p. direct current motor, starters, switchboard, a No. 5 Goulds centrifugal pump and one rotary suction pump are included.

The Hardwood Market

=< CHICAGO >=

A featureless continuance of the inactivity of the past couple of weeks is about all that can be said in a description of present market conditions in Chicago. It is not likely that the local market is any more seriously affected by the laxity in business than is the market in other sections, but a fair share of pessimism is apparent. This, of course, does not mean that there is not a good deal of business done in Chicago, for there is. However, it continues to come with difficulty and as a rule those concerns making the greatest effort are the ones getting the majority of the business.

Of course quietness in the lumber market is to be expected at this time of the year, but the present condition is considered as rather below mormal.

Of the various consuming lines, the box factories are probably taking greatest quantity of lumber, comparatively speaking, but other lines are not talking very optimistically. The taking of inventory is having its fall effect, which, coupled with other circumstances peculiar to the present, is effecting the undesirable result noted.

Generally speaking the low grades of all hardwoods are in the best demand, while uppers in the standard hardwoods maintain the same relative position that they have occupied for some little time.

Quartered oak shows the greatest strength with perhaps a little more easing off in plain oak, although this is not really a definite condition. It is reported that there is some little strengthening in the gum market, although this strengthening has not yet assumed the importance of raising the general level of prices.

-----≺ NEW YORK >=

No changes in market conditions are noted at this writing and until the new year is ushered in few changes, if any, are looked for. The volume of trading is low but on a fairly firm basis. The price situation is satisfactory under existing conditions. The hardwood flooring market is in good shape at firm prices. The only unsteady feature is in gum which is quoted at a great range of values. There seems to be no knowledge of what stocks are available at mill points, some claiming shortage and others an overproduction. This is reflected in wholesale prices. Yard stocks here are only fair and it is not likely that orders for stocking up will be placed till after the day of reckoning on 1913 as a year for trading.

-----≺ BUFFALO >=

The hardwood trade is quiet and stocks are being taken only as buyers need them for their immediate use. The reason given for this is the taking of inventory and that usually begins to be a factor about this time. Whatever lumber is wanted is wanted quickly and this suits the local yards, which have the stock and the supply of cars to make prompt delivery. Prices are holding pretty steady, although not as firm as they

Kraetzer-cure

- ¶ Kraetzer-Cured lumber is susceptible of being thoroughly air dried or kiln dried in less than one-half the time ordinarily required for seasoning unsteamed wood.
- ¶ Kraetzer-Cured lumber does not caseharden, check, end-split or stain, and dries without warping or buckling.
- ¶ Kraetzer-Cured lumber has a uniform tone of color. Its working qualities are greatly improved, and the beauty of the flake on quarter-sawed stock is enhanced.
- ¶ Kraetzer-Cured lumber dries out to materially less weight than unsteamed wood, ranging from 200 to 500 pounds per thousand feet.
- ¶ Kraetzer-Cured lumber will neither shrink nor swell, and the grain will not raise when water stains are employed in finishing.
- ¶ Kraetzer-Cured lumber is not impaired in strength or quality by the process.
- ¶ Kraetzer-Cured lumber eliminates all glue-joint troubles and "will stay where it is put."
- ¶ A list of manufacturers of Kraetzer-Cured lumber will be supplied on application.

Kraetzer-Cured Lumber is produced by the use of the Kraetzer Preparator, manufactured by

The Kraetzer Company
537 S. Dearborn St., CHICAGO

TRADE MARK

Kraetzer-cure

were one were. The furniture trade has been doing pretty well lately, considering the season, and there is a fair demand for flooring.

Plan col. (1992) as it was, nor does quartered oak show quite so much strength. Brown ash and elm are moving fairly well and the demand for various kinds of crating lumber has been quite good at most yards. There is no great amount of two-inch is and 2s in plain white oak here and the demand for it is good. Maple is moving well in most grades, and thoring in that wood, as well as in oak, is in each a dead of the demant?

=< PHILADELPHIA **>**=

The hardwood business remains without important change from a fortnice of the column of trading is made up in small orders, which necessitates some little concession in prices, it costs more to sell goods under present conditions. Although furniture and box factories are keeping fairly busy, buying is of a hund-to-mounth order. Building work shows a little more life owing to a more liberal extension of loans by the banks and work is being rushed while the favorable weather lasts. As many houses close their fiscal year at the end of December, the stock vacancies will not be illed until after taking off the balance sheet. According to reports from the mills, no unusual quantities of hardwood are found anywhere, and the far-seeing merchant realizes that at the first advance of trading there will be a scramble for stock and that considerable more money will have to be paid than at the present quotations.

Oak has apparently eased off a little. Ash, chestnut and maple are among the best sellers. Birch is running easy and poplar is holding its own.

----≺ PITTSBURGH ≻=

The hardwood business here is slowing down gradually like all other branches of the lumber business. It is chiefly a liquidation of stocks. Yards are reducing their stocks to the lowest possible point in order to take inventory. Manufacturers are not buying stock beyond January 1. This means that their present supplies will very soon be exhausted and it is certain that new buying will have to be started by these concerns early in 1914. Prices on hardwood are holding up fairly well. The tendency among all buyers is to go slow and to wait if possible until next year's business prospects are revealed a little more clearly.

=-≺ BOSTON >=

There has not been any change worthy of lengthy comment in hard-wood lumber conditions in this section of the country during the past two or three weeks. While a good active business has been expected for this time of the year, it has not developed and now dealers do not anticipate any material increase in volume of orders until after the stock-taking period is over, which will not be until after the middle of January at least. The large manufacturing consumers of hardwood lumber are not willing to anticipate their wants in more than a moderate way. The great firmness with which prices have been held right along has tended to check speculative buying; and now buyers are waiting to find out how general business opens up after January 1 before doing a great deal in the line of buying.

No serious difficulty has been experienced from a shortage of cars and none is expected now.

Although the general demand for hardwood lumber is only moderately active, prices are well held in most cases. There has been some plain oak offered from a few southern mills at slight concessions. The reason given for this is that the millmen wished to dispose of their holdings before the winter set in. Quartered oak has held firm under a quiet call. Sound wormy chestnut has had a fair call of late. The call for whitewood, one inch Is and 2s is quiet, but for the poorer selections there is a fair volume of business reported.

=≺ BALTIMORE ≻=

The year is drawing to a close with the hardwood trade only in part satisfactory. The expectations entertained during the first few months have not been realized, the tendency of late having been distinctly downward, and the situation at present being such that much uncertainty prevails as to the future. Values have sagged instead of going up or at least being maintained at the old level, while the demand is influenced adversely by a want of confidence in conditions generally. The buyers hesitate because they are not sure as to what developments the near future may bring forth, while the sellers are disposed to push business, and in not a few instances feel impelled to hold out concessions. Salesmen are on the road in great number, and the absence of anything like a scarcity of lumber prompts intending purchasers to be very deliberate about placing orders on the ground that they may be able to get further inducements. From the Memphis section comes information to the effect that red gum went off not less than \$8 per 1,000 feet in almost a single turn. Values in other directions have been better sustained, to be sure, but the entire list is not so strong as it was sixty days ago, and a feeling of doubt assails the trade. It is to be said, however, by way of an offset that in the opinion of some of the best hardwood men, the first recession will likely prove the most serious, and that a rebound is anticipated, so that when the business settles down upon what might be termed a permanent basis, the difference between the current range of values and that which obtained some time

ago will not be inordinately as at that section oak is case to like elsewher, though the dealing hours as med formidable presentions Chestnot is affected path. to where it stood before the rise took place in the late spring, with sound wormy still in better request than during the previous period of quiet Ash and other woods also had to be shayed, or at least the sellers con cluded to do so as a means of stimulating the movement. Stocks in the bands of the consumers are large enough for running needs. Some or the yards are even carrying big assortments, and they buy only to keep up the selection. The mills continue to operate at capacity because of the close approach of the holidays, when the shut down is expected to be of longer duration than usual. Severe weather also is in prospect, and the manufacturers desire to be prepared for a protracted suspension. It likewise remains to be said that the accumulations at this time are smaller than in most other years just before winter, and no real congestion prevails. Furthermore, the outlook for a good foreign business is fairly encouraging. Stocks on the other side have been reduced, and greater interest is being shown by the foreign buyers. Instances are reported of advances offered or obtained by shippers, and the outlook is considered in the main encouraging (C. 112 in y .1) foreign situation was sandergone an appreciable improvement.

— ⟨ COLUMBUS > —

Despite the general let-up in business in this section, the hardwood trade is holding up well in every way. The volume of business shows a falling off, but prices have not decreased to any appreciable extent and the tone of the market is satisfactory. On the whole the trade is fair for existing conditions and an improvement after the first of the year is confidently expected.

Building operations have been very active during the fall as is shown by the report of the city building inspector. The weather has been fairly good and operations will be active until stopped by cold weather. Preparations are being made for an active building season in the spring.

Buying is being done both by factories and yardmen. Factories are the better customers at this time. Concerns engaged in making furniture, implements and vehicles are in the market for larger stocks. Retail stocks are only fair and dealers are not disposed to increase them at this time in view of the approach of the semi-annual inventory period.

The car shortage has interfered with shipments to a certain extent. Most shippers recently report an improvement in the car supply and shipments are coming forward more promptly as a result. Mill stocks are only fair and most of the hardwood mills are fairly busy.

Both plain and quartered oak are in good demand with quartered stock the stronger and prices continue firm all along the line. Dry stocks are not plentiful. There is a good demand for chestnut, especially sound wormy. Poplar is moving better and as a result accumulated stocks are being reduced. The lower grades of poplar are moving the best. Ash is selling well and the same is true of basswood. Other hardwoods are unchanged

—≺ CINCINNATI ≻=

The marketing of hardwood lumber just at this time is quite a serious problem, but not so impossible as some dealers seem to think, judging from the many complaints that are heard on the street. It is true that demand is none too good and what business is obtained is going to the hustlers, the men who are on the job constantly and hunting for business. Prices hold firm in most items and will without doubt remain so. factories are busy and are using most all kinds of low-grade hardwoods suitable for that purpose at fair prices. Plain oak is a good seller in all grades, the lower grades probably selling the best. Sound wormy chestnut is in good request and No. 1 common and better is selling a little better than a few weeks ago. Poplar remains dull except in No. 2 and No. 3 common, which sells readily at satisfactory prices. Ash is still the leading hardwood and is in excellent demand, thick stock being much sought after. Inquiries are fair and while buying is in small quantities, numerous orders are being received from consumers and from the large wholesale yards and the monthly amounts seem to total up pretty well. here are buying an amount of stock just about equal to shipments, being content to keep stocks up to present size, but not caring to load up heavily. It is the general epinion that business is bound to be better after the first of the year.

The hardwood market is holding up well so far as price is concerned and the low trend of yellow pine does not seem to have affected the hardwood market in the slightest degree. The demand is a little quiet just at present, due partly to weather conditions and partly to the season of the year, which always is a little quiet. The general condition of the market, however, seems healthy. The factory demand has been very good thus far. Plain oak, ash and hickory are the leaders on this market. Basswood is a bit quiet just at present, the demand being light. Shipments have been a little slow from the South and this is attributed by local dealers to delays along the road, due to short motive power, rather than to a car shortage. Toledo yards are pretty well stocked up and there will be little buying before the first of the year. Conditions generally are all that could be expected at this season of the year and thus far the outlook for spring business is good.

OAK BUYERS

¶ Increased timber supply makes us one of the largest oak producers in the country.

¶ Our white and red oak timber is of a quality that enables us to guarantee to properly meet your requirements for anything in this line. We can supply large quantities, running strongly to 14′ and 16′ lengths—a good proof of the character of the timber.

¶ We are ready to cut red or white, quartered or plain, 3/8" to 8/4", and will carry in stock a complete assortment of all thicknesses.

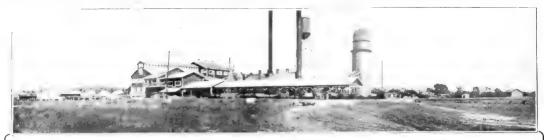

¶ All our lumber is made with the most perfect machinery obtainable—band saws used throughout our mills.

¶ We pride ourselves on the character of our edging, trimming and piling, which insures straight, cleanly-made lumber, uniformly dried.

¶ In these days of quick shipment you are interested in prompt delivery. Our extensive organization and facilities from the tree to your yard, place at your disposal the most perfect lumber delivery service in existence.

¶ We would like to explain further why we can please you, and if you are in the market for anything in southern hardwoods now, would appreciate your writing us today.

PAEPCKE LEICHT LUMBER COMPANY GENERAL OFFICES CHICAGO, ILLINOIS

GENERAL VIEW OF MAIN SAWMILL PLANT. Equipment two bands and four resaws. Daily ten hour capa Av 150,000 feet.

^{*}Indicates stock dry enough to ship within 60 days; remainder of items ready for immediate shipment. The item of Core Stock is a special grade, suitable for veneering over. This is thoroughly dry and we are prepared to quote an attractive price.

All Red and Sap Gum in grades of No. 1 Common and Better is Kraetzerred, insuring the lumber to lay straight and flat and to be all the straight of the

VIEW OF MILL SKIDWAY, WITH PART OF LOGS STORED IN BACKGROUND—WE HAVE 6,000,000 FEET OF SELECTED HARDWOOD LOGS STORED ON OUR MILL YARD.

=≺ INDIANAPOLIS >===

The local burdwood mariet has not reey occupated during the last two weeks. Very little local businesse as seen done, first because of the strike of tempers and second because of the jurisdictional strike of building trades which has marifally out a stor to building operations.

During the teamsters' strike hardwood lumber concerns have madlittle effort to make local deliveries, but have made out of town deliveries as usual, because the cars could be loaded at the yards or plants. Prices appear to be holding their own and it is thought that when the labor troubles are finally settled there will be a rush for business, for a short time at least,

Furniture plants are having a good run and automobile factories are showing a little more activity than they have been showing for some weeks.

——— ≺ MEMPHIS ≻=

The hardwood market here continues in a healthy position. There is some disappointment over the fact that business is not more active, but it is quite up to the average for this time of the year. Furthermore, prices are pretty well maintained and there is no decided accumulation of hardwood lumber in any direction, certainly not enough to cause any forced selling. The lower grades are, as a rule, in rather more active demand than the higher. This has been a phase of the situation which has continued for some time, but there is nothing to indicate any change therein. The lower grades of cottonwood and gum are both in active request. The box manufacturers continue to do a large business and their needs are therefore quite full, with only moderate offerings. Sap gum in the upper grades, too, is a ready seller. Red gum is showing a rather better tone, but there has been very little change otherwise as a result of the recent launching of the Gum Lumber Manufacturers' Association. There is a fair call for the higher grades of cottonwood. Ash is selling readily in all grades and much of this is being delivered green. Prices are firm. There is quite a good movement reported in the lower grades of plain and quartered oak while the upper grades are in but moderate request at the moment. Cypress sells without difficulty in shops, while there is a fair business in selects. The upper grades, however, are moving rather slowly and prices are none too steady at this writing. There is a good export business in southern hardwoods and, while some of the manufacturers in Mississippi and Arkansas are having difficulty in making deliveries on account of car shortage, the local contingent is having little or no trouble along this line

=≺ NASHVILLE >==

The hardwood lumber trade has been quiet in the Nashville market the past week. The business for November will probably fall short of the same month last year, though dealers expect to wind up the year with a better showing than for 1912. Prices rule about steady, and dealers take an optimistic view of the future outlook. Oaks are in demand and some sales are being made of other hardwoods.

───≺ LOUISVILLE >──

"Seasonably quiet" is the general report as to conditions in the local hardwood market. A normal amount of business is being done for this season of the year, and in view of the excellent prospects for 1914 no complaints of consequence are being heard. The probability of the currency legislation being gotten out of the way shortly is a cheering indication, while other general factors seem to be more favorable than heretofore There is no oversupply of lumber either at the mills or in the hands of consumers, and consequently the market, regarded from a technical standpoint, is in a strong position. Prices are being well maintained, a few concessions on plain oak being about the only changes reported. Generally speaking, lumbermen are getting as much for their stock as heretofore, regarding the present lull as temporary, and, as stated, purely a normal development which recurs every year at this season. Quartered oak is probably the most active power. Sound wormy chestnut is in good demand. Some sales of thick poplar have been made lately. Cottonwood is quiet. Red gum is showing improvement.

----≺ ST. LOUIS >--

There is only a seasonable demand for hardwood lumber, but while the orders have been small and for prompt delivery, they aggregate quite an amount. According to reports from the producing territory, while fine open weather has stimulated logging operations, because of the heavy movement of cotton, log shipments to mills have been restricted and some of the mills have been compelled to restrict their operations. Taken as a whole, the manufacture has been pretty strady and stocks of lumber have been added to right along. Quartered oak continues to be the item best in demand with ash and lower grades of cottonwood and gum following. Plain oak is also a pretty good seller, but it is not quite so active as it was, except when prices are made satisfactory to the buyer. Prices are more steady, on the whole, than they were. Cypress is in fair demand, but like other items, the buying is in small lots and for immediate delivery. Prices remain about the same as they were and are low enough to Induce buyers. Considerable buying is looked for shortly.

Mahogany and Circassian Lumber & Veneers

- ¶ The largest assortment of finest figured Mahogany Logs, Lumber and Veneers in the country can be found at the Chicago plant of C. L. Willey.
- ¶ We are just in receipt of fifteen cars of remarkably superior Circassian Walnut Logs, large size, well-figured and of good color, which are now being cut into Veneers.
- ¶ A visit or correspondence from discriminating buyers of all varieties of fine Imported and Domestic Cabinet Woods in Lumber and Veneer is solicited.
- ¶ You will not only find the Willey warehouses well stocked with a superb collection of Circassian, Mahogany, Vermilion, Black Walnut and other fancy foreign and domestic lumber and veneers, but buyers are assured of prompt and painstaking service, and a quality of product not usually obtainable.

¶ To visit the plant take Blue Island Ave. car at the postoffice to Robey Street.

KANSAS CITY

=< ARKANSAS **>**=

The manufacturers the fairly well pleased with the present conditions of the general hardwood market. The beautiful weather during the past several weeks has been very favorable to the timber men in the woods. Good weather has not only been favorable to the lumbermen, but also to the farmers, and they have taken advantage of it for picking their cotton and gathering their rice and other grain crops. The moving of these staple products is placing more money in circulation, and the general conditions have a tendency to strengthen the lumber market. There are some complaints on account of the shortage of cars, but the condition is not nearly so unfavorable as has been experienced at this season in former The present conditions indicate that a heavy spring trade will be had, and every one is expecting a firm market from now on, with gradual

≺ MILWAUKEE ≻=

The continued activity in the building field all over Wisconsin has resulted in the hardwood business holding up much better than is usually the case at this season of the year. Stocks are light in the hands of retailers and the factory consuming trade, so that the continued demand from the building source naturally results in the placing of fairly good orders. Buyers are inclined to take only enough to meet their present wants, but these orders, necessarily placed, are resulting in a total business which is highly satisfactory.

Building operations during the month of November amounted to \$1,711,300, as compared with a total building investment of \$1,643,605 during the corresponding month a year ago. Up to December 1 the total building investment amounted to \$12,975,096, while during the corresponding period in 1912 the investment reached the total of \$14,646,592. During 1912, however, permits were issued for one structure to cost \$2,200,000 and another to cost \$1,600,000. Nearly \$2,000,000 of this gain has been made up and if the present favorable weather continues this year's record will not be far behind that of 1912.

Wholesale lumbermen are confident that increased activity in trade may be expected soon after the opening of the new year. Retailers will then be ready to place larger orders, in anticipation of the spring business, while the factory interests will then have completed their annual inventories and be in a position to order more freely. There is no denying the fact that stocks are light in most hands and that a shortage will be experienced in most lines before the spring trade can be satisfied.

The supply of northern hardwoods seems to be especially restricted and it is in this line that the shortage of dry stocks will surely be experienced next spring. The supply of birch and maple seems to have been concentrated in strong hands and predictions are being made that higher prices in this line may be experienced later. Basswood is not so strong, although most other lines are holding their own. The supply of southern hardwoods seems to be larger with receipts increasing. Plain oak is in leading demand. Prices are about holding their own, although buyers are finding conditions a little more favorable for them than has been the case in several months

Nothing in the nature of a car shortage has been experienced in Wisconsin this year, due to the efforts of the state railroad commission and to the watchfulness of the average shipper in aiding in the prompt handling of cars. Wholesalers have been endeavoring to impress upon dealers the fact that now is the time to place their orders for stock while there is a plentiful supply of cars and before the railroads have their lines congested and their schedules displaced by possible storms.

=≺ *LIVERPOOL* >----

Trade in Liverpool has been rather slack during the past month. largely owing to the continued depression. Some of this has been caused by the suspension of one of the largest firms of timber brokers. The effect on the timber market, however, has not been extensive as there is little stock coming to the market as a result. Nevertheless the effect has been unsettling, and a very rosy view of the market cannot be held out. Even such stock as prime ash, which as a rule sells so well, is moving at lower figures. In fact buyers are rather uneasy at the heavy stocks of ash held, and exporters are advised that on no account should any shipments be made to this port without definite orders. Several carloads, which shippers have foolishly sent on consignments, have recently been greatly sacrificed.

The hickory market on the other hand is better, and some recent shipments have sold well. Good prices have been obtained also for some stocks left over from last season, which were varded because the price offered was not equal to shippers' ideas.

The mahogany market is noticeably weak. Prices showed a considerable depreciation at the last sales and there was a marked opinion in favor of lower prices. Birch is a good spot owing to the shortage of stock, though the present supply of dry wood is the cause of many complaints. Without question the quality is not equal to the standard of a few years ago. Maple is rather scarce but oak is very much overstocked. One Liverpool firm reports that it has never seen oak in all grades in such a weak state. There are more wagon oak planks in stock today than has been the case for many years, and shippers should especially beware of consignment shipments.

American Forest Trees

By Henry H. Gibson

Edited by Hu Maxwell

"AMERICAN FOREST TREES" is a comprehensive work of more than seven hundred pages, illustrated by more than one hundred full page pictures of forest types of tree growth, and hundreds of minor pictures.

It answers every question worth asking about the infinite variety of forest growth in this country, and the utilization of these woods in lumber and other forms. The opinion of an

expert on this work is:

"AMERICAN FOREST TREES" is the foremost contribution that has ever been made to American forest and lumber literature.

The price of this work is Six Dollars (\$6.00) net. It will be sent on receipt of price, prepaid, subject to return and refund of payment if it does not prove satisfactory.

	The very complete character of this work may be judged by the index following:

Why Worry About Saws — When We Can Bring You Sure Relief?

It's our business to supply you with Saws that will save you worry—that will run longest with least re-fitting—that will make good in every sense.

You have enough to think about anyway. Why be bothered with Saws that crack and lose their points and teeth and tension? Why stop to change Saws oftener than necessary? Keep the wheels going by using

ATKINS SILVER SAWS

It's the quality of SILVER STEEL that gives us the advantage. It's the careful scientific handling from start to finish—the "know how" that means better profit to you if you use ATKINS SILVER STEEL SAWS.

Right now is the best time to try

Atkins Band Saws, Circular Saws, Gang, Drag, Edger or any other kind of Saws

Atkins Cross Cut Saws

are great worry savers. Don't be prejudiced. Don't stand in your own light. Give us a chance to make good with you and don't let anybody tell you that ATKINS SILVER STEEL SEGMENT GROUND CROSS CUT SAWS won't make good. You're the boss. Try it for yourself.

BUY THEM THROUGH YOUR DEALER OR JOBBER. SPECIFY ATKINS SILVER STEEL.

IF YOU CAN'T GET THEM IN THIS WAY, THEN WRITE TO THE NEAREST ADDRESS BELOW

E. C. ATKINS & CO., Inc.

The Silver Steel Saw People

HOME OFFICE AND FACTORY, INDIANAPOLIS, IND. CANADIAN FACTORY, HAMILTON, ONT.

THE RUSSEL COMBINED SKIDDER AND LOADER IN OPERATION

Russel Logging Cars are built to stand severe service, of any capacity desired or to suit any length of log.

Logging Economy will interest you

The most convincing proof of any machine's efficiency, next to a personal trial, is the expression of those who have used them.

We shall be pleased to furnish you with the proofs or the names of the operators who will be glad to show you the machines in operation.

The Russel Combined Skidder and Loader has demonstrated itself to be superior in design and construction. The great decrease in cost and increased efficiency of logging is bound to appeal to the operators.

Russel Wheel & Foundry Co., Detroit, Mich.

When the price of lumber is low

it's a good time to consider cutting down your logging-costs with

CLYDE LOGGING MACHINERY

The cheapest logging in the U. S. is done with CLYDE machinery. We want to prove this to you by taking you to some operations similar to your own where CLYDE logging machines are used.

Westinghouse Motors form the Reliable Drive for Wood-Working Plants

 ${
m A}^{
m FTER}$ Westinghouse motors are properly installed in a wood-working plant, the only attention they require is an occasional cleaning, inspection and lubrication. Beyond this, there is nothing to be done.

They are ready to start any moment they are wanted and they keep the machines they drive in continuous operation until the power is shut off. They are very rarely out of commission for repairs. Their life is very long; some of the first Westinghouse motors are still in successful operation.

Such reliability is the result of long experience in design, thorough study of operating conditions, and great care in manufacture. These factors combine to make Westinghouse motors more reliable than the service conditions, for which they are intended, require.

Of course, like any other machines, these motors must be properly installed. Westinghouse service takes care of this detail by giving full information on the installation of Westinghouse motors in any plant.

To receive full assurance of motor reliability, specify "Westinghouse Motors."

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS. VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak. We make no two-ply stock, and do not employ sliced cut

quartered oak. Our quartered oak panels are all from sawed

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you,

f Veneers and f Panels with a f Reputation

M/E manufacture Veneers in all the native woods and for all purposes. Also Built-up Panels in native and foreign woods—three and five-ply—and have established a reputation for furnishing high-grade material. Send us your inquiries and orders and become one of our satisfied customers.

Christmas Suggestion

What could be more acceptable as a Christmas gift to your friend in the lumber or veneer business, or in any line connected with forest products, than a copy of "AMERICAN FOREST TREES"? This beautifully illustrated and bound volume contains, as you know, every bit of practical information worth knowing regarding American forest trees. In addition it is absolutely above criticism in the matter of technical correctness; in short, an absolutely authoritative publication written in the practical man's language.

In order to insure the volume being delivered on time, write immediately to HARD-WOOD RECORD, 537 South Dearborn Street, Chicago, Ill., enclosing remittance. Price \$6.00, prepaid.

WRITE US BEFORE SELLING

Fisher Building,

- - CHICAGO

'PHONE HARRISON 1984

OUR DOUBLE BAND MILL-HUTTIG, ARK.

Why We Can Give "Value Received"

We own one hundred thousand acres of the best virgin Southern Hardwood timber.

We operate large band mills at Huttig, Ark., and Deering, Mo.

We cut FORTY MILLION feet of hardwoods annually and carry 15,000,000 feet IN STOCK.

We sell only stock cut on our own mills and so can GUAR-ANTEE the quality of EVERY shipment.

We ship high grades that increase the size and percentage of your cuttings, reduce factory costs and shrink the waste pile. Therefore:

We can SAVE YOU MONEY on every shipment of oak, ash, gum, elm, cypress, tupelo, hickory, cottonwood, sycamore, soft maple and dimension.

LET US PROVE THIS ON YOUR NEXT ORDER

Wisconsin Lumber Company Harvester Bldg. CHICAGO

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hordwood Flooring and how to care for it—also prices—and is free

The T. Wilce Company

22nd and Throop Sts. CHICAGO, ILL.

CHOICE BIRCH AND MAPLE—10,500 ACRES I offer the above tract of best quality and splendidly located timber in Ontario, ten miles

I offer the above tract of best quality and splendidly located timber in Ontario, ten miles from Sault Ste. Marie, Ontario, a town of 25,000 population. Will cut 90% birch and maple. Estimated by George F. Beardsley, cruiser of Grand Rapids, Mich. Location and mill site on deep water. Can ship either by water or rail. Lands in fee simple—no crown dues, no export restrictions. Close to American Soo. Easy logging. Reasonable price and terms.

William H. Ranson, Sault Ste Marie, Mich.

SAVE YOUR MONEY BY USING THE

RED BOOK Published Semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is eyen to you. Write for terms.

SEND US YOUR INQUIRIES

A Prominent Veneer Man says:

¶ "I believe your new service showing the exact requirements of the Veneer and Panel Trade to be highly accurate, and a necessary part of the office equipment of any progressive veneer or panel factory."

¶ The same information would cost you thousands of dollars. The cost of our service is a small fraction of that.

¶ Ask your competitor to tell you how it has helped him, and then write us for details.

CLASSIFIED ADVERTISEMENTS 37-39

SUBSCRIPTION TERMS: In the United States and its possessions, and Canada, \$2.00 the year; in foreign countries, \$1.00 extra postage.

In conformity with the rules of the postoffice department, subscriptions are payable in advance, and in default of written orders to the contrary, are continued at eur option.

Instructions for renewal, discontinuance, or change of address, should be sent on the price of the date they are to go into effect. Both old and new addresses must be given.

Both display and classified advertising rates furnished upon application. Advertising copy must be received five days in advance of publication dates.

Entered as second-class matter May 26, 1902, at the postoffice at Chicago, Ill., under act of March 3, 1879.

Review and Outlook

General Market Conditions

THE GENERAL CONDITION of the lumber market could probably be summed up in the statement that the sawmill trade as a general thing, while having some little accumulation of lumber on hand, has come to the decision that as long as it has held off so far it can continue to hold its stock pending some definite and more favorable developments, while the consuming trade, on the other hand, continues its very hesitant buying policy, probably because in the first place the closing of its books is imminent and a favorable balance is desired, and on the other hand because the trade itself is not any too certain regarding the market for its products, and is also rather of the belief that something will occur to decrease the cost of the raw material.

Nothing startling has developed in the last two weeks to give substantial proof of the soundness of the policy of either faction of the hardwood trade, that is the producers and the consumers, but it is probable that both are based on a comparatively sound line of argument and that justification can be seen for either course.

There is unquestionably more lumber at mill points right now than there has been for sometime, but as stated in previous issues of Harddoor Record, the bulk of these stocks is in strong hands and no imminent necessity has been seen of disposing of them at unreasonable sacrifices. It is true that with the coming on of the holiday season the roadmen are being called in, and with this condition in effect those stocks which the millmen are particularly desirous of moving are probably being shaded a trifle in order to find a ready market, but generally speaking there is no increased tendency to continue the process of easing price levels, and there is no logical excuse for so doing.

Business in general seems to be very favorably impressed with the progress along the lines of currency reform, and more particularly with the rumor that James J. Hill will be the chairman of the National reserve board. The passage of this measure should most assuredly mean the removal of the uncertainty and agitation which has been founded upon the assertions of the banking element regarding the measure. It is most surely subject to amendment where any provisions are found to be inadequate to take care of conditions properly, and bearing this in mind and the fact that the bill has been drawn up and sponsored by some fairly brainy individuals, and hence offers a reasonable surety of being at least logical, there is absolutely no reason why the currency measure should cut any further figure in business. As pointed out before, the business man's real interest in the measure, so far as the average individual is concerned. is limited to his fear of its effect upon the banker's disposition and not upon the actual condition of currency in the country. Hence, with the measure actually passed and the uncertainty removed, this cause should be definitely removed as a possible disturbing factor.

The only further legislation that could reasonably assume a position in the category of trouble-makers is that aiming at the large business combinations, and President Wilson's expressed ideas along these lines should mollify business very decidedly.

So far as the various factors in the consuming field are concerned, there is nowhere any very marked down-in-the-mouthness, nor is there on the other hand any undue disposition to become excited as to the possibilities of marked increase in trade after the first of the year. Conservatism continues in all lines and will unquestionably be paramount for several months ahead. It is reasonable to predict somewhat of an active call for lumber after the first of the year because of the postponing of so many orders until inventory time is over; but it is entirely likely that a great many of these orders are not what could reasonably be called "new business," but rather simply the taking up of postponed contracts for stock.

There seems to be some little additional hope in the foreign trade, both because of the more evident opening up of inquiries and also because of decreased freight rates. Offerings abroad, however, are as a general thing not accompanied with any expressed intention of shading prices in order to obtain increased business, as shippers generally are in comparatively strong position, and are not inclined to sacrifice their stock at figures below what they think it is worth.

The various standard hardwoods continue in approximately the same general position that has been felt for so long, the most evident condition being the more favorable call for the lower grades as compared to the demand for the better end of the stock. Nothing notable has occurred in connection with the markets for the woods individually as they all seem to be about holding their own, both as to actual call and market value. The demand for sound wormy chest-nut continues to excite more or less interest, the call probably being the result of increasing favor with which it is viewed by panel men.

Plain oak and quartered oak still lead the list and there has been a marked strengthening in the market for ash and sound wormy chestnut. Wide poplar is in very normal request and gum is not any too well received.

It is a certainty that there has not been anywhere near the disruption in hardwood markets that the yellow pine men have suffered. Pine is still in an undesirable position.

Taking the situation on the whole, HARDWOOD RECORD feels that in wishing the trade a MERRY CHRISTMAS and a PROSPEROUS NEW YEAR it is not uttering an entirely irrelevant expression, but feels that business in general can very well look with comparative satisfaction upon existing and prospective conditions.

Christmas on Turkeybone Mountain

T(H) (COVER FROTER) to streaming this issue of Hyrk both R(R), and appropriate without a world of explanation for the replace with suggestions, and to present who is present to the usual allotment of imagination would fail to give the picture a world of meaning. The air is full of Christmas.

Its common consert stowns one of the essentials. The snowless country is a country where Christmas comes and goes without kindling much enthusiasm, and it leaves little for memory to dwell on or fancy to finish. No complaint on that score can be lodged against the scene so delicately outlined in the accompanying picture. Snow is shown in abundance, but not cut of proportion with other phases of the scene.

It is plainly a northern hardwood region which the camera caught in such artistic drapery. Timber of merchantable size is not plentiful, but that is a matter of minor importance, because there are people who go through forests without looking for timber, and there are occasions when commercial questions are out of place, and this is one of them.

Christmas and evergreens are usually associated, but is that necessary? Take another look at the picture and see if anything seems wanting. Not a pine, hemlock, spruce, fir, or cedar is visible; yet, a more careful scrutiny will reveal an understory or fringe of green leaves. They belong to the mountain laurel or ivy. The new-fallen snow can find no lodging place on the smooth, varnished leaves of this shrubby tree; and for that reason the green foliage shows over the top of the snow, while all about and above, the slender and leafless limbs of chestnut, basswood, and birch bear their burdens of whiteness.

Some people think of a hardwood forest in winter as a cheerless, uninteresting place; but that is an opinion acquired at a distance, not from intimate association. If one knows how to observe and is capable of appreciation, there is a world of interesting things in a snowy wood. The habits of the various trees in such a situation is a theme in itself which can be studied to advantage at no other time.

Does snow bend all trees alike? Does it break the branches of all? Do all behave alike when the burden comes down from the clouds in search of a lodging place? The common opinion among the uninformed and the unobserving is that evergreens are much more liable than are deciduous trees to be broken or fixedly distorted by snow. Abstract reasoning leads to that conclusion, but facts do not. Who ever saw a spruce, hemlock, fir, pine, or cedar broken or permanently careened by snow? Who, that is acquainted with northern hardwood forests, has not observed saplings of beech, chestnut, hickory, ash, oak, elm, and basswood, bent over in long parabolic curves while the burden of snow is on, and so set in that position that they never again wholly regain their perpendicular? Snow seldom strips limbs from large evergreens, but frequently breaks those of leafless trees. The cottonwoods and soft maples are sometimes literally wrecked by snow. Small needleleaf trees are often buried for weeks (and on high western mountains for months) under piles of snow; yet, when the accumulation melts, the little trees spring back again into their original positions with an alacrity which seems to say: "Never touched me." The leafless hardwoods so buried will probably never again stand erect, but will develop permanent "sled crooks."

The cover illustration is from a photograph taken on Turkeybone Mountain, West Virginia, by the Field Museum of Natural History, of Chicago. It is one in a series of thousands of pictures of scenery in all parts of America, which that institution is collecting as a permanent record of conditions and scenes which are passing away. It is fortunate that such records are being made, because all will be changed in a few generations, and that left will give little hint of the wild and exhilarating beauties of nature before man disturbed it.

It may be remarked, since it is a Christmas occasion, that the Christmas tree was not formerly, and now is only occasionally, a feature in the rural festivities of those mountain people. The

innovation came so far as it has yet come—from the North. To this day it has little foothold among them, outside the towns. The country children still follow the custom which their grand-parents followed, and hang their stockings by the "mantelpiece." Such gifts as come mysteriously in the darkness go into the stockings to be drawn forth a few hours later amidst excitement and enthusiasm, by the early risers who swarm from their beds long before the first gleam of day appears in the East. As a medium of conveyance of catable gifts from the donor to the recipient, the Christmas tree is doubtless more sanitary than the stocking, but the mountain children would vote unanimously for the stocking,

The change from the old to the new is not accidental or without cause. The tree was able to drive the stocking out only because other changes were taking place in the customs of the people. The ruling factor has been the stove or the furnace which has supplanted the wide fireplace, the hearth, and the chimney. Stocking-hanging was inseparably connected with the belief on the part of the children that gifts came down the chimney in a pack carried by a corpulent saint. It is apparent, even to the credulous mind of a child, that no respectable saint can squeeze down a stovepipe with a wallet on his back. Consequently, there could be no utility in hanging stockings by a stove or in front of a steam radiator, and the Christmas tree came as a substitute for stockings, because the former was not associated with any kind of chimney.

The tree is a mighty tame substitute for the stocking, as the child views it. Of course, those who never tried the stocking know no better. The tree's tinsel and tapers are a fraud, in the opinion of children who have watched the dull glow of embers blinking in the ashes during the long night before Christmas.

Revert again to the cover picture, in a serious way. It is a characteristic representation of one of the few remaining regions where stockings are still hung by the chimney on Christmas night. Many of the homes in that region still have their wide fireplaces. Wood is plentiful. Sermons on conservation of natural resources have not yet been preached there. The people burn as much wood as they please. The only difference between an armful and a cord is the labor of cutting and hauling; and the people have horses for hauling and axes for chopping it.

Why should they stop to figure out how many broom handles could be made from a maple backlog? They roll it into the generous fireplace and think nothing of the orations of conservationists. Neither do they calculate the number of spokes and ax handles a cord of hickory ''top-sticks'' and ''fore-sticks'' is good for, but pile them on; and though the blazes which go up that chimney might not please Gifford Pinchot, they ''look good'' to the family gathered round the hearth. The pinch of scarcity has not yet been felt in the woodyards of that region, and until the pinch comes, the fireplace and the chimney will roar with the flames of crackling chestnut, sputtering birch, hissing hickory, and every other wood which, by the grace of Providence, still grows abundantly on those everlasting hills.

The New Money Measure

I't Is APPARENT that the business of the country must adjust itself to a new system of banking. Time only will determine whether the new law will do all the good predicted by its friends, or half the harm prophesied by its enemies. The probability is that the sum of results will lie somewhere betwixt the two extremes. The discussion of this measure since it first came before the country in concrete form affords a fine example of how men will differ in their conclusions, though their reasonings are based on identical facts. That is neither strange nor unusual. It has always been that way and probably will continue so for a long time. A problem in pure mathematics is the only question that can be solved by educated men, and all of them arrive at exactly the same conclusion.

The money bill has been attacked by able men and it has been defended by others no less able. Experience will now take its slow course, and history will give the final decision. Let it be hoped that those who predicted disaster to the country's finances will prove to be mistaken. Now that the bill has become law, al

must join in bearing whatever burdens it may add, and all will share in its benefits. However much men may have mistrusted the measure in the past, no man who is a friend of prosperity wants the measure to prove a failure, since it has become the law of the land.

Fortunately, there is a disposition to accept the measure in good faith, and that will contribute a great deal to its ultimate success.

Comments on Kiln-Drying

THE ARTICLE ON PAGE 22 entitled "Scientific Lumber Dry ing" contains much valuable and authentic information on the structure of wood. The history of attempts at hastening the drying of lumber is also of considerable interest. The body of the argument, however, seems to HARDWOOD RECORD to have too much of what is familiarly known as a "punch." Usually the punch contains a spice of exaggeration.

As to the merits of the type of kiln which the writer of the article commends, Hardwood Record would raise no question. Judging by the thoroughness with which the writer handles his subject, he seems to be sure of his ground, but it is a fact that all of the other methods are still in use and in numerous cases are being successfully applied. No method achieves good results without competent application.

The smoking process to-day is furnishing a fairly good article of shortleaf yellow pine; in fact, when reasonable care is exercised a very rich color is attained.

The bake-oven kiln, or a modification of it, is being used with reasonable success on western woods. The factor of humidity must, of necessity, enter into its operation, for the moisture extracted from the lumber must be taken up by the surrounding air.

It would seem that the temperature and humidity in a blower kin could be controlled by the speed of the fan, and in the condensing kiln temperature and humidity can be controlled by the volume of cold water passed through the condensing pipes.

Kilns operated on the moist air principle, in which ventilation and humidity are controlled by dampers, are doing good work.

The theory of the expansion kiln seems plausible enough, but is a little too deep.

One point in the kiln-dryining of lumber that seems of a good deal of importance is not touched upon, and that is the piling of the lumber. It does seem that the loosely piled load will dry faster than the one that is closely stacked.

Isn't the capacity of a kiln determined by the amount of dry lumber it delivers rather than by the number of feet that can be erowded into it?

A Valuable Opportunity

A GOOD DEAL IS HEARD from time to time on the subject of the inroads which substitutes are making on the uses of wood. Lumbermen well understand that their business is menaced. The manufacturer of the fiber box probably views the problem with more concern than some of the others, because of his direct competition with the fiber container; but most manufacturers of wooden articles are aware that aggressive rivals are after the business.

Talks, lectures, and articles in newspapers and magazines are not always on the lumberman's side of the question, and if they were, he needs something more tangible than talk if he is to convince the great body of wood users that substitutes are poor economy. Object lessons are wanted. The opportunity to give these lessons is coming. It is an opportunity which never came before, nor was it ever before so greatly needed as it now is. It is the Forest Products Exposition which will open in Chicago next April and will follow in New York.

That exhibition has not been designed as a place of amusement. It may lack some of the novelty devices and scenic effects which usually draw crowds at great shows; but it has a serious purpose which ought to attract. It will be educational. It will show what no other exposition in the world has ever shown—the products of the forests prepared for the needs and pleasures of man. Many

people have been led to believe that lumber has become scarce and must soon fail to supply the country's needs, and that substitutes must be sought. That idea should be combatted. Timber is not as plentiful as it once was, but lumber is still abundant, and there is enough to supply the people, meet all their wants, and some to spare. The only condition is that waste must be lessened.

Let the exposition show how that is being done. Let it further show that the warning cry against exhaustion in the near future need alarm no one, provided available resources are wisely used. Substitutes have made much of their headway because their manufacturers have been more aggressive than the manufacturers of wood.

If the stress of circumstances crowds wood from places which it once held, it should seek other uses. The search need not be far or long. Demand exists, or may be created, for all the woods which should be cut and marketed. The general public's opinion of the products of the forest will become more favorable upon more intimate acquaintance.

What the Conservation Congress Accomplished

A MONG THE FOURTEEN HUNDRED DELEGATES present in Washington at the Fifth National Conservation Congress were more foresters than had ever heretofore attended any similar meeting in this country. The forestry work accomplished, as evidenced by the twelve printed reports in pamphlet form prepared under the direction of the forestry committee, is considered by forestry experts and lumbermen to be the best work that up to this time has been done for American forestry and lumbering. These results alone would justify all the effort that has been made and the presence in Washington of such a representative body of men.

The adoption by the Conservation congress of the recommendations unanimously presented by its committee on water power was a long step forward in the development of a definite governmental policy, recognizing clearly the principle of Federal control; and also recognizing clearly the necessity of offering to the investor opportunity to invest his time and money in the development of water power under conditions which safeguard both the public interest and his investment.

The committee on water power comprised ten men exceptionally qualified by knowledge of this subject in all its aspects. Under the able chairmanship of Dr. George F. Swain, president of the American Society of Civil Engineers, it worked out and presented not a mero declaration of principles, but concrete and specific recommendations which should be of great value to the government in framing the legislation that is needed to convert the present comparative inactivity in water power development into a period of active conservation by use.

The fact that a committee comprised, not only of professional experts of the highest distinction some of whom are actively associated with the water power interests, but also such men as ex-Secretary Henry L. Stimson, Gifford Pinchot and Lewis B. Stillwell, was able to agree upon a definite and constructive program and that this program received the emphatic endorsement of the Conservation congress is a demonstration of the public spirit of the committee and the ability of the congress to accomplish effective and constructive work. All true conservationists will hope that our national government will promptly enact the legislation that is so greatly needed.

Testing Philippine Woods

M ANUFACTURERS IN THIS COUNTRY are constantly making inquiries regarding the availability of woods of the Philippine islands for furniture, finish, handle, vehicles and other commodities, and it has developed that little is known on the subject. Many inquiries have received short answers because all information on the subject can often be embodied in a few words.

Announcement was recently made that arrangements had been completed between the head of the Philippine forest service at Manila and the director of the Forest Products Laboratory at

M. r. or, Wes, wretche the dank woods will be tried out. Sample of such as are rear elepterolarly promising will be for warded and they will be converted into veneers at the laboratory. These will be put through seasoning processes to determine their behavior in the kiln and after they have been manufactured into furniture.

The Philippine islands are rich in woods, both in kinds and amounts. Some are beautiful, others extremely plain. Most are very heavy, though a few are noted for their lightness. Woods so richly figured as walnut and mahogany do not appear to be plentiful. Dark colors prevail in most of the samples received in this country. Some possess great strength and hardness.

Thus far the woods from the islands have failed to get much of a foothold in this country. One buyer seems to have waited for another to do the first buying and trying out. A notion has prevailed that the woods will give trouble in the seasoning process, though there is little real knowledge on which to found that opinion. That they will be hard to work is another opinion which may be changed upon fuller knowledge. There can be no question that exact information concerning the woods from beyond the Pacific will be appreciated in this country.

An Important Bill

A BILL HAS BEEN INTRODUCED in the House of Representatives at Washington by Mr. Bartlett of Georgia and in the Senate by Mr. Bacon of the same state, which may be classed as important because, if passed, its effects will be far reaching. The measure has the support of the American Federation of Labor, and that organization is carrying on an active and aggressive campaign to have the bill passed. Its terms may be summarized as follows:

It shall not be unlawful for persons employed or seeking employment to enter into any arrangements, agreements, or combinations with the view of lessening the bours of labor, or of increasing their wages, or of bettering their condition; nor shall any arrangements, agreements, or combinations be unlawful among persons engaged in horticulture or agriculture when made with the view of enhancing the price of agricultural or horticultural products.

The obvious purpose of this proposal, in view of the well-known attitude and declarations of its proponents, is to abolish civil or criminal liability for the prosecution of a boycott by a labor combination, to prohibit injunctive protection for employers or non-union workmen during a strike, and to exempt labor organizations from the Sherman act. In an effort to give the measure added political strength combinations of farmers are equally promised the benefits of its exemptions. The Federation of Labor endorsed this measure in its conventions of 1912 and 1913, instructed its executive committee to procure its immediate enactment without change, and through that committee has presented these demands to the President and Congress, and now by circular appeal, is directing the organization of committees to wait upon senators and congressmen in each state during the coming holidays and to procure the sending of individual letters to representatives, demanding the immediate passage of this measure without alterations.

Business men and workers should fully understand what this measure means and be ready to protect their interests.

Further Transgressions

A UTHORITATIVE FOREIGN REPORTS that come from Liverpool are to the effect that exporters are continuing to ship round hickory on consignment in the face of a very considerable accumulation at that point. This report is deplored from the fact that this policy is utterly foolish and based on anything but logical reasoning. The consignment evil has been pretty thoroughly exploited, and it is only fair to say that as a general business proposition it is meeting with less and less favor, but it still exists nevertheless, and in this particular case it seems to be rather flagrantly in effect.

It is to be hoped that the handlers of this very desirable product will see their way 'clearly in the not too far distant future to discontinue the employment of such policy in the interest of the trade at large.

"And You, Too, Brutus?"

THE ILLINOIS COMMERCIAL MEN'S ASSOCIATION (I. C. M. A.) takes a bek at the lumberman in a circular recently sent out, with pictures showing a bad train wreck and one where only one person happened to be killed. It claimed that because a flagman failed to do his daty, wooden cars were responsible for the loss of life in the bad wreck. An attack on the lumberman's business from that quarter was heafty to be expected.

The Eucalyptus Game

I T WOULD SEEM TO BE about time that California should take a hand in the enealyptus game that is being played on her credit. The misrepresentations of the promotors have been exposed again and again by Hardwood Record and by other lumber journals; but the game goes on. California land is being hawked about the East, under pretense that fortunes can be made in from ten to twenty years by growing enealyptus timber. The wood is advertised as a substitute for and superior to oak and hickory; and the claim is made that a plantation can be cut, milled, and sold at an enormous profit in a few years.

Circulars boldly quote the Government as authority for the preposterous claims of profit, notwithstanding the fact that the United States Forest Service has warned the public against the deceptive claims of the promoters. Hardwood Record published a review, in its September 25 and October 10 issues, covering nine pages, of the report made on eucalyptus for the Government by H. D. Tiemann, who spent parts of two years in California making a special study of this wood.

The report by the Forest Service clearly shows that the only true claim for eucalyptus made by the promoters is that the trees grow very rapidly. The Government report says the tree "is not suitable for lumber until it has passed an age of at least forty or fifty years, and a diameter of three feet or more." This warning is repeated almost verbatim in another part of the Government report which says that a tree "under two and a half to three feet in diameter, and less than forty or fifty years cld, should not be considered as a lumber-producing tree."

The reason why younger and smaller trees are worthless for lumber is because the wood warps, shrinks, checks, splits, and behaves so abominably that it defies the woodworker to do anything with it.

This is a vital matter, and it is the point persistently ignored or persistently misrepresented by the promoters of eucalyptus plantations who claim that cuttings from young stands are good for furniture, finish, handles, vehicles, and lumber. A statement was said to have been made at the recent Land Show in Chicago that "a eucalyptus tree six inches in diameter will sell for sixty dollars for ax handles." Such a tree will not sell for sixty cents or six cents for ax handles to any handle maker who knows his business and knows the wood.

That is an extreme instance of misrepresentation. Most of them are milder than that, but they are none the less intended to deceive or, at least, they do deceive those who are not posted. Eucalyptus grows very rapidly. The wood is valuable as fuel. Some old trees—only a few—have produced fairly good lumber. That is about as much as can be truthfully said of it. The promoters quote and distort Government and other publications, using a line or a paragraph here and there, to boom their land. Those who are thinking of buying eucalyptus land should first ask the Forest Service, Washington, D. C., for Mr. Tiemann's report. After reading that, if they still want to invest in eucalyptus land, they have a perfect right to do so.

California owes it to her good reputation to look into the euea lyptus game as it is being played in the East. That state stands pretty high in the esteem of the people generally. It has so many valuable and honest resources that there is no excuse for fooling people into making investments there which will inevitably lead to disappointment.

Pert, Pertinent and Impertinent

Made Up for It

Fay: The Widow Dashaway's husband didn't leave her much when he died, did he?

Ray: No; but he left her very often when he was alive,--Philadelphia Record.

High Art

"Great Scott, woman, are you trying to ruin

"Why, Henry! you don't even know what I paid for the gown."

"I know that any gown that looks as bad as that one costs more than I can afford to pay."-London Opinion.

Modern Translation

There is on the South Side of Chicago a summer amusement park named, from the French words "free from care," "Sans Souci Park."

Two young men passed this park on a street car recently. One of them evidently was a stranger in the city, and his friend was showing him about.

Said the stranger: "What does Sans Souci

His friend readily replied: "It's from the Spanish, and means 'I should worry.' "-Everybody's.

Thoughtful Housemaid

"Mr. Bohr is in the parlor, miss."

"Tell him I'm out."

"Just as you say, miss, but he has a beautiful box of candy with him."

Her Preference

Before the fire Christmas eve two old maids

were planning for the holiday.
"Sister Molly," said the younger, "would a long stocking hold all you'd want for a Christmas gift?'

"No, Elvira," said the elder, "but a pair of socks would."-Philadelphia Public Ledger.

Foreign Veneer and Panel Manufacture

Editor's Note.

The rollowing parter was read by J. B. B. Stryler of the Perkins Gr., Conquiny, Lausdale, Pa., before the become of the National Venera and Panel Manutacturers' Association at Cheego on December 9. The article is been it at least intermitten which Mr. Stryler gained through a real temporant panel manufacturing centers and offers a very comprehensive comparison of the methods employed both in this country and abroad.

I have been as sed to make a comparison of American and Euro pean methods, as applied to the veneer and panel manufacturing industry. While not a manufacturer of these products myself, 1 have come more or less closely in personal touch with factory conditions, etc., in American and certain European countries, namely, England, France, Austria Hungary and Germany. So, if you will pardon my presumption as an outsider, I will give you the conclusions on this subject which I have reached as the result of observation and conversation on the ground.

I fear that, in one respect at least, this paper will not be of the help to my hearers which I desire to be. This refers in particular to the fact that in my visits to veneer, panel, furniture and kindred plants in Europe I observed but little having to do with mechanical methods or preparation of veneer, stock, etc., or of construction which I can present to you as being an improvement on the methods of our American manufacturers.

However, it may be of some interest and doubtless satisfaction for you to feel that this is the case.

When it comes to the question of the finished product we must admit that much of it shows up exceedingly well, in fact, better

The cutting of veneer and the manufacture of panels, tops, etc., in Europe, dates back much farther than it does in the United States, and this is only natural, the age of our country and theirs being considered. However, today the United States leads Europe in the number of plants in operation, the amount of output and the general magnitude of the business. In France, for instance, veneering has been done for hundreds of years, but, instead of being carried on as they are now learning to do it, it was done in a very small way indeed. Where veneered lumber was desired, the small cabinet maker would cut his own veneer; the product he then obtained should be more properly called by the name of thin lumber. Two men were employed in the operation, the log being placed with each end on a high saw-horse or platform, and the veneer sawed off by hand, one man under the log and one above, pulling the saw up and down much after the fashion in which two-man cross-cut saws are operated in our timber camps today. This method may even yet be seen in use in remote localities over there.

Today there are some veneer and panel plants in almost all the countries of Europe, Russia undoubtedly leading the list in the number of plants being operated and the amount of production, followed by France, Germany, Austria-Hungary and England in the order named. Italy, Belgium and some of the other smaller countries do something in this line also, but little is being done in Spain, I believe. Russia ships her product to the other countries of Europe, large quantities going to France, and to England particularly. Although I did not see the plant myself, I was told on very good authority that one Russian concern had nine American veneer lathes in operation in its plant. Speaking of shipments being made from one European country to another, as freight rates are considerably higher over there than they are in the United States, it occurred to me that England should offer a good market for American manufactures. That country being a free trade country, except on a very few commodities, and with no duty on the commodities under consideration, it seemed to me that a plant on the United States seaboard might be able to do a considerable amount of business in England. Bear in mind in this connection that all timber products consumed in England must necessarily be imported from abroad, there being no native timber supply in that country. I was greatly impressed in Liverpool when I saw the immense stocks of mahogany logs which were carried by the dealers in that city. For six or eight

blocks along the river front mahogany logs were piled to a height of twenty or thirty feet. These were in the yards of different dealers and it was explained to me at the time that the logs were auctioned off piecemeal to the highest bidder, the idea being that in disposing of them in this manner the best prices would be obtained, as each log would bring the most it was worth.

I judge the American manufacturer is most interested in methods for obtaining better veneer and panels, or cheaper methods of manufacturing them, or both, when they can be both obtained in combination. As before stated, while much that is produced in these lines in Europe shows up very well, it is not produced as cheaply as it can be produced here, this in spite of the fact that labor over there is much cheaper than here. The average European workman, while steady and conscientious in the carrying out of his work, does not seem to admit of the speeding-up that the American does.

As evidence that the American manufacturer is in advance of the manufacturers of Europe, I would cite the fact that in the largest and most progressive plants over there machinery of American design and manufacture is in evidence almost everywhere-veneer lathes and appliances, trimmers, dryers, taping machines, glueing appliances, sanders, scrapers and much machinery of a kindred nature. I have been in a plant in England, for instance, which is engaged in the manufacture of phonograph and talking machine cabinets, and in furniture factories in Vienna where I have seen so much American machinery on all sides that it made me homesick. The hydraulic press has heretofore been used to a less extent over there than it is here, but they are now adopting it as time goes on, and those of American make seem to again have the preference. Furthermore, in many instances where machines are not American made, they are such a good imitation that it seemed to me they were mcdeled as closely after our own as it was possible to make them.

Naturally with so much American made machinery and appliances in use in their plants their methods must rather closely conform to our own, and it is on account of this fact that I am unable to give you very much which may be of help to you. During the past few years I have known of numerous instances where the Europeans have come to us for ideas and methods, but I believe it is a rare thing for us to go to them with the same object in view. Although American made or modeled machinery is so largely employed by them, the production of the average plant, comparable with ours as to size, equipment and number of men employed, falls considerably short of the production turned out over here. In addition to veneer and panel plants, I visited several factories engaged in quite different lines of manufacture, and my impression gained thereby was that the American manufacturer, given an equal investment of capital, will generally turn out a considerably larger production. The European manufacturer, regardless of the particular line of work in which he is engaged, is very apt to give more attention to details, and there is more time spent on details than usually prevails in the average American plant.

They prepare their logs much as we do, usually boiling or steaming them. The cutting of the veneer is the same, as is the subsequent drying also. In Austria-Hungary and Germany the alder is largely used for core stock. Five-ply work is usually laid up in the same manner as here, but in Vienna, which in Austria is considered as the home of fine furniture (and some beautiful work they certainly turn out), I saw Circassian and mahogany tops laid up three-ply, the veneers being laid on three-fourths-inch or seven-eighths-inch alder cores, sometimes with the grain and sometimes across the grain. I believe that the American manufac-

turer usually considers that hega class work of this nature can be done only by the use of cross reating. I should say that the preparation of the veneer and the building up of same into panels, tops, etc., in the white, was no better than here, but the finish taey put on their work in many cases excels ours. Labor being cheaper, they can afford to spend more time on this part of their operation. As one Austrian long in the business expressed it to me, "It takes the human touch to get the right thish." While I am unfamiliar with the materials generally used for finishing purposes, both here and abroad, I understand that at some points in the finishing process they use materials little, if ever, used in this country. The deep appearing finish which they obtain, I consider, is very pleasing to the eye. Beech is used largely in France in the making of panels, as it is a comparatively cheap wood in that country. Today three-eighths inch veneered panels are in demand there for use in places where they before have been in the habit of using thin, solid lumber, as much trouble was encountered with the latter on account of splitting.

In Germany quite a business is maintained in the manufacture and sale of "wood plates," as they call them. These are made up three, five and seven-ply, being about three-fourths, one and one-fourth and one and three-fourths inches thick, respectively. These are made up to as large as six by twelve feet and sold for various uses, such as beds of printing presses, billiard tables, etc. The large sized plates are oftentimes bought by the users without regard to the particular purpose for which they are to be used, and they are then cut up into different sizes as required.

In London there is a panel factory which struck me as being unique. In this plant there is not a single power driven machine, the reason being that there is a law prohibiting the use of any power driven machinery in the district in which the factory is located. In making panels they place the center stock on the floor and the glue is applied by hand with a large brush. This plant presented an instance of modern and obsolete equipment in that it had several hydraulic presses which were worked by a hand pump, while, on the other hand, the glue was kept in condition by placing the bucket in which it was contained over a gas flame. The method of handling resulted in a great deal of blistered work, which was repaired by placing a wet cloth over the blistered portion and then running a hot flat-iron over the wet cloth until the veneer was stuck down.

In Germany I saw a veneer clipper, a description of which may be of interest to some of you. It is built along the lines of an ordinary veneer clipper, but it is very much more powerful than those ordinarily used in the United States; the knife comes down very slowly on an angle of somewhat less than forty-five degrees. This machine clips the ends off from a whole flitch of sliced veneers at one time and leaves so clean a cut that the ends can be spliced into a perfect joint. It is used for cutting the veneers to proper length and width, and also for jointing veneers ready to splice. The splicing is done by young girls who tack the edges of the veneer to a board and then stick a strip of gauze tape over the joint. On the tops turned out by this concern cross-banding and back veneers used are nearly all one-twentyfourth-inch poplar, with a very small proportion of such sliced oak veneers as are not good enough for face stock. The face veneers used are sliced one-twenty-eighth-inch black walnut and plain sliced one-twenty-eighth-inch oak. All five-ply work is glued in two operations, that is, the core is first veneered with the crossbanding and when this comes out of the bales in which it sets over night it is put on sticks and left to dry out for six days. It is then taken to the sander where about one-half of the crossbanding is sanded off, thus leaving the cross-banding about oneforty-eighth inch thick when the face and back veneer are put on. When this is finished it is left on sticks another six days before the face and back veneers are sanded. Upon inquiry it turned out that the main reason for gluing-up this five-ply stock in two operations, and giving it the twelve days' drying out, was that, inasmuch as the operators wished to lay up the veneer slightly damp on the theory that it would lay flat, and cause less trouble in

splicing, there would be less likelihood of the finished work drying out and checking afterwards.

In Austria I saw a machine which to me was something new. This was a miniature lathe, specially constructed for the purpose of turning down the cores from the large lathes. These cores, of an original diameter of from five to six inches, were placed in this small lathe, or "coffee grinder" as the owner of the plant called it, and turned off until a core of only about one and one half or one and three fourths inches diameter remained. The veneer produced by this small lathe was naturally not of a quality suitable for anything outside of core stock, to be used on the cheaper grades of panels, etc., but for this purpose the veneer thus recovered, and which ordinarily would have gone to waste as cores, answered the purpose just as well as veneers cut from the original log.

In making any sort of comparison whatsoever between American manufacturing plants and methods and those of Europe it should be remembered that, generally speaking, manufacturing operations are carried on in this country on a much larger scale than they are in Europe. Of course manufactured products of all kinds are consumed in Europe, as a whole, in great quantities, but these commodities are usually turned out from factories having a smaller output than ours, the result being many factories with a small output rather than a relatively smaller number of factories with larger outputs. This has a tendency to allow of much closer supervision, wherein the personality of the workman or operator can be made to enter. The wages paid in Europe vary more or less for the same class of work in the different countries. England undoubtedly heads the list in this respect, followed by France, Germany, Austria Hungary and Russia in the order named. It is no uncommon sight over there to see the father and mother and all the children working together in the same plant, but it struck me as entirely new and novel to see women working as hod carriers and railroad track laborers.

We are very apt to complain of high taxes, but as compared to taxes in the most of Europe ours are exceedingly reasonable. For instance, I was told by an Austrian manufacturer that the government expected ten per cent in the way of taxes, based on the net profits yearly realized from his business, and that they were supposed to pay twenty-five per cent yearly of the gross income realized from any property owned and rented by them to other parties. In answer to my inquiry as to whether or not this excessive rate of taxation was actually collected, and if not, what was done about it, he smilingly replied that in Austria the citizens paid their taxes the same as they did in America. As this gentleman had visited America on several occasions, I had nothing more to say on the subject. I cite this instance in regard to the rate of taxation simply in order that, when things seem to go wrong, you may have the satisfaction of remembering that there are other people who are not so well off as we are.

The sum total of the impressions which I received by reason of coming in contact with the European conditions and manufacturers was that they would follow the lead of American manufacturers so far as the veneer and panel business was concerned, and they are quite willing, I believe, to acknowledge this fact. Furthermore, it behooves us to remember that they are very apt pupils.

Legal Point of Interest

In Kentucky a lumber dealer cannot acquire a mechanic's lien for materials furnished a contractor for use in constructing a building, unless notice is given the owner of intention to claim a lien, immediately after the last item of materials is furnished. Presentation to the owner of an order for payment given by the contractor, together with an account of materials furnished for the building will not operate as such notice. Nor does the fact that the owner gives the lumber dealer a check for the amount called for by such an order and account show such acknowledgment of indebtedness on the part of the owner as makes him personally liable for other materials. (Kentucky Court of Appeals, Wright vs. Monroe Lumber Company, 160 Southwestern Reporter 788.)

New Central American Hardwoods

LEVA

Anong the not invoces of Certical America there is one that has quite recently attracted considerable attention. It is the espaye, (\cdot, \cdot, \cdot) and (n-h) and (p), which is an evergieen tree belonging to the same family as our sumae and poison ivy. It appears to

be a tire which is increasing in degree of representation; at least there are parts of Central America where the increase in its numbers has been very perceptible, especially along the Bayano river in Panama, where this tree attains its best development. Here, it is said, this species, which is now being exploited, yields from 20,000 to 40,000 feet an acre. Its habitat is the eastern slope of the continental divide and sometimes is found at an elevation of 1,000 feet above sea level. The tree is usually found in the dense forests, where the trunks lengthen into tall cylindrical columns, often without limbs for a distance of from forty to sixty feet, reaching a total height of from eighty to one hundred feet. A diameter of from three to five feet breast high is nothing unusual for a tree of this species.

The wood of the espave has generally been used locally only for making kitchen utensils and for fuel. Recent investigations have shown that it is worthy of a higher rank among the woods of Panama than has hitherto been assigned to it. The wood has a very pleasing texture and is light brown at first, with a shade of yellow, but will turn considerably darker upon exposure to the light and air. It is moderately fine but very cross-grained, which add to the figure of the wood. The alternate streaks of light and dark shades on a smooth radial surface stand out very plainly and remind one of mahogany, and for this reason the

wood is often called false or espave mahogany. It takes a fine polish, and being of rather more than medium hardness and toughness it has recently found applications to many purposes where strength and elasticity are essential. It has been used for making furniture and cabinet work and doubtless will sooner or later find

its way into use for interior finish. The wood has great lasting qualities and has for many years, formed one of the chief materials in Central America from which boats and dugouts were made.

Espave has recently been introduced into the New York mar-

kets as another furniture wood, and it comes very opportunely, for espave is destined to take the place of some of the less valuable mahogany substitutes.

Among the few commercially important trees of Porto Rico is the laurel sabino (Magnolia splendens). As its botanical name indicates, it is closely related to our magnolias and like them is an evergreen. The tree is a noticeable one wherever seen. more as an ornamental, in a good many, parts of Porto Rico, than as a lumber tree. Its habitat is the sunny slopes of the Luquillo mountains and foothills, being seldom seen on the lowlands near the sea or on the dry arid region along the southern part of the island. While it is often a tree that is branching too near the ground, or is otherwise rendered unfit for lumber, it frequently rises to the dignity of a large tree with a trunk from eighteen to thirty inches in diameter and reaching the height of from eighty to one hundred feet, with a crown often conical in general outline.

The foliage is peculiar to the magnolias in the United States. The leaves are of a dark green color on the upper surface and of a lighter color on the under side. They are oblong, more or less pointed at both ends, thick, and glossy. The flowers resemble those of our cucumber tree, only they are much smaller and, therefore, less

conspicuous. They are pure white and during the time of blossoming render the tree very ornamental.

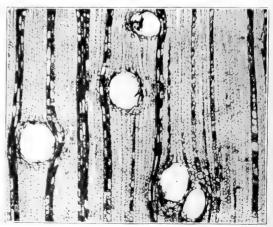

The wood of the laurel sabino is of a light brown color, mixed with a shade of blue. It does not resemble the wood of cucumber in general aspect, but favors more nearly certain grades of our

LAUREL SABINO TREES ON THE EDGE OF A DEADENING

TWIG OF LAUREL SARING

WOOD OF ESPAVE

yellow poplar. In its structural characters it compares very favorably with our magnolias and yellow poplar. When green or partially dry, it works yery easily, but becomes considerably harder when thoroughly dry. It takes an excellent polish and retains its color indefinitely. It is moderately strong and tough and is durable in contact with the soil.

Few woods in Porto Rico have found as many uses as the laurel sabino. Its chief use now is for making furniture and it has also

been employed in finishing interiors of houses. While it makes good wood for fuel and charcoal, it is too valuable for these purposes. The comparative scarcity or restricted habitat of laurel sabino makes the wood eminently a cabinet wood of peculiar value. Its structural and mechanical qualities are nearly similar to those of yellow poplar, and for this reason it is well adapted for at least some of the uses for which its more abundant relatives are employed.

The Briar Root and Its Substitutes

Briar, a corruption of the French work "bruyere," is the common name of a small tree botanically called Erica arborca, which is a member of the heath family (Ericaccae), to which our common trailing arbutus belongs. Briar is a term frequently applied to the different species of Smilax, but they are entirely unrelated to the true briar bush or white heath as it is known by the English-speaking people. It is particularly abundant in its wild state throughout southern Europe, where it forms an important undergrowth in the mountain forests. It is said to grow most luxuriantly and very abundantly among the trees and shrubs forming what is called in France the "Maquis," which covers the mountain sides. The tree varies in height from nine to twelve feet and produces much of the wood used for making the so-called briar-root pipes.

In the course of the last thirty or forty years, since the briarroot pipes have formed such a large article of trade, the briar trees have become the source of a lucrative industry, and Calabria in Italy is today the center of this trade. Originally the chief supply of briar-root came from France and is to this day commonly referred to in the trade as the "French briar." More than fifty years ago the center of the industry was along the French Riviera and the Ligurian coast in Italy, but the French briar is at present practically exhausted. Formerly the supply came from the department of the Landes and from the Pyrenees mountains on the border line between France and Spain. It has long since reached the Calabria district in southern Italy, and it is now generally conceded that the material obtained from this region is of admittedly superior quality. For a long time large quantities of the Calabrian briar were shipped to the United States. The briar root exported from Italy to the United States during 1905 and 1906 was valued at about \$100,000 and \$125,000, respectively. Of late years the Italian product is becoming scarcer and France again supplies a considerable quantity, a large part of which is used in the United States.

It is the root and not the trunk of this small tree that is employed for making pipes. The work of digging up the root is carried on from October until the end of May. The roots are thoroughly cleaned and trimmed and brought to the mill, where they are cut by means of circular saws. They are from a few to ten inches in diameter, but are never exported in the rough state. After being cut up into small blocks they are placed in boiling water for a period of from ten to fourteen hours, after which they are thoroughly dried, and then put up into sacks and shipped into this country, to be manufactured into briar-root pipes.

Briar wood is dark brown, very dense, close-grained, but comparatively light in weight, easily worked, and takes a very good polish, which it retains. It is very strong, tough, and durable, and possesses the quality of turning darker with age. It was thought at one time that no other wood was so well adapted for making the best grades of pipes. The American manufacturers began to look around for native woods to be used in place of the French briar, and it was soon found that the European heath tree is not the only plant available for so special a purpose. The first native woods used for making pipes on a large scale were the rhododendron and kalmia or mountain laurel. Both of these plants have very large roots, considering the size of the stems and crowns. Some of the

roots are a foot in diameter, and pipe makers have found that they will serve as a splendid substitute for the French briar. Enormous quantities of these roots are dug up every season in the mountains of North and South Carolina, where these shrubs or small trees attain their best development. The roots are shipped to pipe factories in the North and the finished product is usually sold as the genuine French briar.

Apple wood and to a lesser extent black cherry wood are used, but they are not so durable as the rhododendron and kalmia, or ivy, as it is often called in the Carolinas. A small Australian tree called ury (Hakea leucoptera) yields a wood that is used locally for making pipes, but it has not yet been introduced into this country.

L. L. D.

Junco, a New Source of American Hardwood

The junco is the missing link of the tree family. Restricted to a single valley, that of the Rio Grande, in Mexico and Texas, this tree, with its small crooked trunk bristling with thorns, is little known to the outside world. It is popularly supposed to bear no leaves, flowers or fruit, but it really bears all three.

The minute leaves are scale-like, the flowers very small, and the fruit is a tiny berry. It is the only known representative of its family in all the world. It is not known that the junco ever grew anywhere outside of the valley of the Rio Grande, or that it ever had relatives close enough to claim kinship. Some trees, now nearly extinct, had a wide range in past ages—the big trees of California, for example, which grew all the way to the Arctic ocean. But the junco so far as is known has always lived in one place and has always been the same dwarfed, crooked tree that it now is.

Except as fuel, it has not been put to any use. Thousands of cords might be cut in the valley of the Rio Grande, in Mexico and Texas. Of late, however, the growing scarcity of hardwood has called attention to the despised junco tree as a possible substitute for some of the more popular woods, and the result is a surprise to those who thought the wood had no commercial value. Clarence A. Miller, Consul at Matamoras, Mexico, has called the attention of the United States government to the good qualities claimed for it.

The wood sinks in water. In color it ranges from brown to black. It receives a high and beautiful polish, fitting it to take the place of such expensive woods as ebony and rosewood for small cabinet work. The trunks are so short and crooked that only small pieces of timber can be obtained from them. Few trunks exceed seven feet in length and eight inches in diameter. The wood is said to be admirably suited for the keys of musical instruments, jewel boxes and other bureau cabinets, chess men, checkers, paper knives, knobs and other small turnery, inlaid work, and indeed for almost all purposes for which costly foreign woods, in small pieces, are now used.

Many of the trees, whose woods are familiar in the lumber markets, belong to large families. There are 250 members—they are called species—of the pine family, and they are scattered all over the northern hemisphere. The beech and the oak families have even more members, and they, too, are widely scattered. The laurel has over 900, the palm, 1,000, while the apple, counting the many varieties, is said to have more than 3,000. But the junco is fighting its life battle alone on the dry slopes of Texas and Mexico.

Scientific Lumber Drying

Editor's Note

11 obown, processes read by Z. Clark Thwing of the Grand Repr. Actor: Works, Grand Rapids, Mich., the resting of the National Vener and Panel Manufactures. As our from all Chicago on December 10. Compart on the process will be found on page 15 of the issue.

A thorough momerstand (g of the fibrons and ceilular construction of lumber and its laws of growth is essential to a clear understanding of the correct and scientific principles of drying lumber. Those who try to reduce lumber drying to a few definite rules and practices fail to realize that every tree possesses individuality as does every human-locing.

In other words, the range of variation between the white oak of Michigan and the so-called delta or swamp oak of the Mississippi valley is so great that no general description or rules for handling can be made to apply to both accurately. In the same way there is a marked variation between the famous "cork" pine of Michigan and Wisconsin and the present substitutes for the same in western pine of the Pacific coast. It is therefore inevitable that any underlying principle governing the drying of any particular kind of lumber must be applied with that judgment and discretion that is prompted by the character, the locality and particular variety of wood to be handled.

In general, commercial varieties of lumber have been divided by scientific investigators into three groups.

FIRST—non-porous. These are so called because a cross-section of the wood under the microscope gives no indication of pores, capillaries, duets, or sap canals similar to the well-known sap canals of the oak. In other words there is uniformity in the cross-section due to absence of these canals, which sometimes makes it difficult to identify even the annular growth rings. Under this head are practically all evergreens or pines, technically called conifers.

SECOND—The diffuse-porous are intermediate between the nonporous and the ring-porous below. In other words, the sap canals are small and uniformly distributed throughout a cross-section. They can be observed under the microscope in cross-sections that have been well smoothed and prepared for inspection. Examples of this class are the maple and gum.

Third—Ring-porous. This is the most easily described and distinguishable class for the reason that the sap canals are large and grouped together in a conspicuous arrangement. Oak and chestnut are typical of this class of woods. It is perhaps well in passing to note that this last classification will be the most difficult to dry because it lacks the uniformity in texture and solidity that the two other classes possess.

The medullary or pith rays, which are most conspicuous in woods like oak, are pockets containing food material for nourishing the tree. They are practically on a radial line from the heart to the bark of the tree. These pith rays are more or less perceptible in a number of commercial woods but in no other case have they reached the stage of beauty that they give to white oak when properly questors were

The growth rings of a tree are distinguished, not by the sap canals, but by the difference in size of the sap cells between the spring and summer growth. It is evident to any one that the growth of the tree, which always occurs just under the bark, will be more rapid when there is an adequate supply of water in the ground, or in the spring time. It will be equally obvious that as the season progresses into midsummer there will be less and less water in the ground and as a consequence growth will be limited and the size of the sap cells will be greatly reduced. This may be observed with the naked eye in the cross-section of nearly all woods, and is very clear under the microscope.

The sap cells of a tree are to be distinguished from the sap canals. The sap canal in oak trees, for example, is that open space about the size of a pin through which free sap may move upward from the roots to the trunk and branches above. The ducts are sometimes twenty to thirty feet long and have cross and transverse connections with each other in order that they may continually

carry the sap upward. Nature provides small check or flap valves to prevent the sap from flowing downward.

The sap cells, strictly speaking, are part of the fiber of the wood, containing a limited amount of moisture, and are only from one-sixteenth to one fourth inch long. The sap cells also serve to carry sap upwards and are provided with more frequent transverse connections and check valves than are the sap canals. The sap cells are long and narrow, shaped somewhat like an Indian canoe with ends overlaming.

In longleaf pine the cells are unusually long and there is encouragement to believe that this wood will eventually make a paper that will rival the paper made from Canadian spruce, for toughness. If you take a piece of paper and tear it carefully in such a way as to rip the fibers, and examine the torn edge under a microscope, you will observe short fine hairs which constitute the wall of the sap cell and which are the valuable strength giving part of the tree for either woodworking or the preparation of pulp for artificial wood products. It is evident, therefore, that the portion of the wood to be preserved for useful ends is the fiber that constitutes the cell wall.

It has been determined by experiment that in some instances, notably in such woods as cottonwood and spruce, the total moisture content may be as high as 150 per cent; the greater portion of which may be termed "free" moisture, forming the contents of the sap canals. To render this more explicit: presuming that the net weight of lumber when bone dry would be 100, the total weight of the lumber when green would be 250, two-fifths of this consisting of solid material and three-fifths moisture.

The cell moisture is the liquid contents of the cellular fibrous structure of the lumber, which will consist of about 30 per cent of the 150 per cent total moisture content.

Practically all the shrinkage that takes place in the drying of lumber occurs after the "free" or sap canal moisture has evaporated and is caused by the contraction of the cell walls during the removal of their contents.

In passing it may be well to mention that the part of the tree that is most alive, or the part that is growing, is directly under the bark. For this reason the heart of the tree always contains less life than the circumference, in fact the heart of the tree is the point at which death of the cell first occurs. The mere reference to the giant sequoias of California, which have famous hollow spaces in their centers, is sufficient evidence to show that life and perfection in the heart of the tree is not at all essential to its ultimate growth and development. On the other hand, it is a well-known fact that the girdling of a tree, a little deeper than the sapwood, will kill the tree. It is, therefore, evident that the sapwood will always contain a greater amount of moisture than the heartwood and will be subject to more shrinkage and swelling in drying and will prove to be the strongest wood for use where tensile strength is necessary. The heartwood, however, will be the choice wood when it comes to the securing of rich grain and color effects. This is particularly noteworthy in the red gums where the heart has a very rich color.

To go more directly to the subject under discussion—scientific lumber drying—it will be interesting to call attention to the various methods for drying lumber which have served woodworkers and sawmills during the last hundred years, and show a distinct evolution from the crude to the refined. This evolution at every step shows an increasing efficiency and growing comprehension of the treatment that is necessary to rapidly and safely remove the moisture from the wood without injuring the fiber.

The first method of drying lumber is as old as the world—air-drying in one form or another has been practiced since the first

tree was cut down in the garden of Eden. There have been variations in the method of sawing, the method of piling and the length of time the lumber has been exposed to the various climatic conditions of the different locations. There is no denying the fact that the process of air-drying is slow and fairly safe, but always accompanied by discoloration, warping and surface and end cheeking. This is caused when the surface dries more rapidly than the interior and a tension is set up which produces internal strain that either cheeks the outside of the lumber or honeycombs the center, e. g., oak will always have the surface cheeked in stock one inch, or show honeycomb in two, three or four-inch thicknesses.

Other classes of woods, such as gum or pine, that grow in the moist climate of the South, will show mildew or a fungous growth of a rather bluish color and mottled character, which begins immediately when an attempt is made to air-dry the stock and which seriously reduces its value. The bluish color is always considered a selling defect in the yellow pines of the South, even when used for structural purposes. It is therefore evident in woods of this character that air-drying has its serious disadvantages.

The first attempt at artificial drying of lumber was the smoke kiln which may be remembered by the old woodworkers of the present time. Its original form was that of a collection of boards standing over a fire built in a hole in the ground. The boards were placed on end, wigwam style, and the heat and smoke were supposed to dry the lumber. The smoke kiln in later form was a series of brick arches in which fires were built and maintained by burning sawmill waste. The smoke and hot gases from these fires passed through the lumber in the dry kiln and were supposed, by means of heat, to evaporate and carry away the moisture in the lumber. It is still used to a limited extent in out-of-the-way places where modern progress has not affected the industry to any marked extent. The lumber dried in the smoke kiln was scorched and always discolored by smoke, and the fire hazard of this smoke kiln was so great as to make it uninsurable. The process was slow, the cost of operation enormous on account of excessive labor required to tend the fires, and the resulting lumber was dried so unevenly and by haphazard that satisfactory results were never obtainable. A certain amount of moisture was removed which reduced the shipping weight, but other than that, the result of the smoke kiln was very unsatisfactory.

The next type in the development of the kiln was the bake-oven kiln. This type has numerous varieties, but in every case involved the introduction of heat into the kilns by means of steam in some form of radiators or pipe coils. The air in the kiln passing over the coils or radiators and circulating in through the lumber was supposed to vaporize the moisture in the boards. The ventilation in these kilns, and the circulation of heat in the same were matters that received little or no attention, and, in fact, were even less appreciated. In any event the improved results of the bake-oven kiln over that of the smoke kiln previously known were so marked that the enthusiastic advocates of these steam radiation kilns thought perfection had been atttained.

It is of course obvious that in the bake oven kiln there was little or no control of drying conditions, except such control as might come from the regulation of the heat when more or less steam was admitted through the valve to the radiator or coils. No attempt was made to introduce or control humidity, and kilns of this type were usually built with no consideration for the building material used, as to its durability, quality, tightness or insulation.

It is therefore evident that the atmosphere in a bake-oven kiln would usually be very dry and that there would be a serious tendency to heat the lumber too quickly after inserting it in the kiln. It was inevitable that lumber dried in this type of kiln would be badly crusted or caschardened. In other words, a shell of one-righth to one-fourth-inch thickness would be formed by the heat on surfaces and edges of the board, and the center of the board would be not appreciably affected by the heat, nor would the center moisture be removed to any extent. We therefore have an operation which is very similar to broiling beef steak, in which

the attempt is made to sear and seal the juice in the meat,

It is evident that this was exactly wrong in lumber and the moisture left in the center would eventually cause difficulty either by checking, honeycombing, warping, winding or twisting, and would ruin any fine piece of woodwork. Another very good example of crusting can be taken from the domestic experience of baking biscuits or potatoes. It is a well known fact that when they are placed in a hot oven of the kitchen range or gas stove there is a crust formed on the exterior which seals the moisture in the center, and the housewife will testify to the fact that the too rapid baking of a biscuit or potato will leave a soggy center.

Another feature of this uneven drying, which makes bake-oven dried lumber unsatisfactory for commercial use, is the fact that lumber is over dried on the outside and under-dried inside and is always liable to change shape when it is planed, dressed, ripped or resawed. The bake-oven kiln, therefore, has disadvantages which are rapidly relegating it to the scrap heap, in the same way that the old side wheel steamer is giving away to the more modern stern propeller.

A modification of the bake-oven kiln that is in more or less use today is the so-called blower kiln. This type of kiln offers more possibilities of circulation than its predecessor, but it is at the same time to be equally criticised for its exterior casebardening, checking and interior honeycombing. It is perhaps easy to see that in a blower kiln the rapid movement of so much air, as accomplished by the blower process, will inevitably tend to create an excessive and extravagant fuel bill.

In other words, the air, which is forced rapidly over the heating coils in a blower kiln, will be moving at high velocity and will be very thirsty or have a strong affinity for any form of moisture. This will have two results: First, the air, because of its velocity, will absorb only part of the moisture and do only part of the work of which it is capable, meaning extravagance in heat; and second, the air surrounding the lumber will always be very dry, which will cause even more serious casehardening than mentioned in the bake-oven kiln. The blower kiln has practically no control either of temperature or humidity.

The blower kiln, because of its rapid absorption, however, has a certain value in connection with the rapid surface drying of thin veneers. The proper means of humidifying and control are still lacking and an economical development along this line may be expected.

During the last ten years there has been a rapid change of front on the part of those interested in securing scientific and accurate results in the use of lumber dry kilns. The rapid change has been due perhaps partly to the general movement all over the country toward a keener public consciousness and partly to the more extended application of practical chemistry and physics to the woodwork manufacturing trades all over the country. The modern efficiency expert is another indication of the progressive spirit.

The first modification in lumber drying was the appreciation of the fact that something must be done to decrease the costly casehardening and its attendant evils. A less dry heat was thought advisable, and it was not long before every manufacturer of dry kilns was talking "moist air kilns." What was or was not covered by the term "moist air" was hard to discover. Some enthusiasts went so far as to boil their lumber, and from this extreme some sawmills went to the opposite point and introduced an open end one-fourth-inch 125-pound pressure live steam pipe into the dry kiln. The result of the attempt to introduce moisture in connection with lumber drying was, of course, beneficial and there was a consequent reduction in the amount of casehardening. Almost coincident with the discovery of the need of moisture was the attempt to shorten the time of drying. It was perfectly natural to conclude that as moisture decreased casehardening it would permit quicker drying. The eagerness to hurry practically offset the improvement caused by moisture and the aggregate result was comparatively little actual progress. There was, therefore, a woeful lack of understanding of another fact-that the more rapidly you dry lumber the more carefully you must control the conditions of moisture, temperature and circulation. Again, however, it was thought perfection had been attained and every concern who had sold a foot of pipe for dry kilns advertised in bold headlines "moist air dry kilns will dry your lumber without degrading." Avoid such general statements. They are misleading. It is no more true that the haphazard introduction of moisture will make efficient dry kilns than it is true that the haphazard method of applying heat to the bake-oven kiln would produce efficiency. The term moist air as applied to dry kilns, unless qualified by the assurance of adequate control and regulation, has become so general and indefinite that it is absolutely lacking in any real descriptive force. The term is misleading and means nothing but the introduction of a little artificial moisture in one way or another. It bears no relation to the heat and ventilation which are equally important considerations.

It has remained for the last four or five years to develop a dry kin in which careful attention has been given to the control of operation and to the three absolutely essential functions of lumber drying, viz., humidity or moisture, temperature or heat, and ventilation or circulation. Unless all these three elements are carefully considered in the preliminary designing of the building, the selection of the building material, the proportion of radiation furnished and the type of ventilation, the results can be no other than haphazard.

Two control methods are in general use today. These are the so-called condensing kiln and the expansion kiln. The condensing kiln has been designed on the basis of air recirculation-in other words, the air in the kiln is circulating over and over and around and around the lumber, and at certain regular intervals in this circulation passes over cold water pipes or open water sprays where some of the moisture is condensed from the circulating air. The air thus relieved of part of its moisture passes on again to do additional duty in again absorbing moisture from the lumber and yielding it to the condenser. If the moisture charged air is exhausted from the kiln, instead of recirculated, and fresh air is drawn in, it is obvious that nature will do, without charge, the duty devolving on condensers in this type of kiln. The maintenance of temperature in the condensing medium is a very difficult matter. The cost of water used in condensers is excessive and unnecessary. The corrosion and coating of pipes or spray devices used for condensation will be a very serious item in running expense because there will be removed from the lumber large amounts of acid and organic matter which will tend to rapidly corrode any exposed surfaces. The tannic acid of oak and chestnut is especially harmful to the ironwork of any kiln wherein humidity and heat are combined.

The control of circulation in a condensing kiln is uncertain as there is no draft from the outside which can be depended upon to pull, and the recirculation must rely upon the application of heat only. The advocates of condensing kilns claim the advantage of independence from outside conditions, but it is a grave question if this is not a serious disadvantage. In other words, the condensing kiln attempts to do artificially what nature will willingly do if given a fair chance.

The condensing kiln has been adopted by government departments for its experiments because it believes that it will serve to control the conditions in the kiln more accurately than any other method. They freely admit that it is an expensive type of kiln to install, elaborate to operate and is so particular in its demands for care and attention as to be impractical for the average woodworker who desires reasonably "fool proof" equipment.

The expansion kiln is the latest development of the lumber drying art. In this kiln we have adequate control of the heat, humidity and the circulation. Humidity control means that the water vapor in the atmosphere of the kiln can be increased or decreased at will. The lumber on entering the kiln can be immersed in a hot fog which will be an absolute safeguard against casehardening and its attendant evils. This hot fog, which is maintained to a more or less degree through the entire drying process, is an absolute preventive of fire in the kiln. It is impossible to light

a match or carry a lighted candle or lantern in this type of kiln, as the fog is too dense to permit a flame to live. This fog, when properly combined with heat and pressure, may be forced into the lumber in such a way that the free moisture can be rapidly vaporized and the moisture contained in the cells can be heated and expanded so that the cell walls will be opened, the check valves loosened and the opportunity afforded for the removal of all organic matter. To refer again to our analogy in the kitchen; if a potato is steamed or boiled it will expand to the full limit of its skin and usually crack or open the skin. At the same time the steamed potato is drier at the center than the baked specimen. Lumber with cells thus expanded and opened has lost its power of contraction, because the sap cells are empty. Is it not clear that lumber thus dried will not be shrunken and therefore cannot swell or change dimension appreciably after leaving the kiln?

In absence of this hot fog, or in a bake-oven kiln, these sap cells will be shrivelled up with contents dried to a granulated form. This dried and shrivelled cell when exposed to moisture will again swell. Consequently bake-oven dried lumber will shrink because its sap cells shrivel and it will again swell because its shrivelled cells will swell when exposed to moisture.

Let us think what this means to woodworkers. It means that when the lumber is dried by the humidity or expansion process the interior trim placed in a building will not show the usual shrink or swell. Doors, wainscoting, bookcases and every part of the handsome and expensive woodwork that is popular in the up-to-date office and home could be made with imperceptible joints and the elaborate arrangements designed by architects for concealing shrinkage and swelling in panels, frames and lapped joints could be eliminated.

Think what it would mean to manufacturers of panels and glued-up stock if they could know that the heavy centers would be uniformly dry and would not shrink or swell; if they could know that the tendency to twist and warp when resawing was removed. Think what it would mean in the cabinet trade if case parts, drawers and doors could be fitted snug and true, without the necessity and expense of refitting; if parts could be fastened rigidly together without danger of changing from shrinking and swelling.

It means that woodwork which, because of its variable shrinkage in different climates has been displaced by pressed steel which has no change of dimension in moist localities, can again come into its own, superseding this selfsame steel, which is subject to such severe temperature expansion. The thoughts suggested by this line are far reaching.

Another point in the expansion kiln is the fact that with controlled circulation and temperature it will be possible to eliminate not only the shrinkage but also the degrading of the lumber which has been one of the most wasteful features in a woodworking plant. Checking ends, surfaces and around knots and swirls has been a serious source of loss. Not only has the checking been expensive, but even more waste has been caused by the tools tearing the surface in dressing. Degrading is eliminated because the absence of shrinkage has removed the internal stress and strain that causes all checking and honeycombing; the absence of casehardening has avoided the hard crust that dulls edge tools and that leads to twisting and cupping when surfacing, ripping or resawing, and that causes unnecessary labor cost. If the waste caused by degrading in dry kilns could be computed it would be found to reach an enormous sum-sufficient to pay annually for the installation of dry kilns, built, equipped and operated on a scientific basis.

The efficient ventilation of a dry kiln has been notoriously disregarded by the practical woodworker. Apparently any inlet or any outlet would be deemed sufficient, no matter where located, or how large. It is obvious to those who have followed us that effective circulation can never be obtained except by the admission of fresh or dry air and the removal of the dead or saturated air in accordance with natural laws. No practical man would think of having an outlet for saturated air at any height along the side

of the kiln, because at such point the air will be taken out of the kiln before it has done its full service absorbing moisture from the lumber. It is, therefore, becassary to so design a kiln that only the saturated oil will be drawn out. It is also a well-known fact that hot dry air as it absorbs moisture will gradually settle. This compression caused by the settling of the air as it absorbs moisture can be made useful for permeation purposes. It is not difficult to see that the circulation in a kiln offers the most effective opportunity for control and efficiency in use of the fuel which generates steam.

Perhaps a word of appreciation should be said in closing with regard to the marked interest that has been shown in the lumber drying art within the last two or three years. Woodworkers are beginning to realize that the proper drying of lumber is of the utmost importance to their success. The process of education and comprehension has been slow, but it has been progressive and those in a position to observe, realize that we are at the beginning of a period of more rapid development in scientific lumber drying.

Instead of assigning the operation of the dry kiln without regard to the intelligence of the operator, the time is rapidly approaching when the kiln will be operated systematically, when the records will be more important than those of the watchman, when the temperature and humidity of the kiln will be just as closely watched as the water column and the steam gauge, when the lumber will be just as carefully tested as costs of manufacture and selling are now computed.

Florida's Wood-Using Report

The state of Florida has published a report of its wood-using industries. The material was collected and the bulletin was written by the United States Forest Service. Twenty-seven woods are used for manufacturing purposes, but ten of these are supplied by outside regions, so that the state is making use of only seventeen native grown woods. This is the more remarkable when it is considered that the state has in its forests 165 woods of which no use is reported for any purpose.

For one wood that goes to the factories, ten never appear there. The report gives a list of 165 woods which are not named in the output of factories. It is doubtful if any other state equals Florida in the number of native species. However, many of them are scarce, and the trees are small, so that the total amount of available timber is not as large as the number of species might indicate. Some of the woods are hard, heavy and strong, with fine colors and figure. The chief future uses will probably be found in the manufacture of small commodities rather than in furniture, flooring, finish and similar articles.

About ninety-seven per cent of all the material reported in Florida is softwood, and longleaf pine greatly surpasses all others combined in quantity. The following table shows the amount of each wood used annually, and the average cost of each per 1,000

acct.	
SUMMARY OF KINDS OF WOOD USED IN FLORIDA	
Quantity used	Average
annually	cost per
Common Name Feet b. m.	1,000 ft.
Longleaf pine	\$ 11.66
Cuban pine 63,563,000	11.94
Loblolly pine	11.77
Cypress	17.58
Shortleaf pine	11.60
Spanish cedar	24.95
Evergreen magnolia 2,658,000	8.02
Red gum 992,000	11.55
White oak 701,179	35.91
White ash	25.07
Sand pine 250,000	13.20
Yellow poplar	89.02
Hickory 103,500	32.90
Sweet magnolia 80,000	22.00
White pine	87.04
Mahogany	164.29
Black gum 33,000	10.00
Live oak 32,000	59,00
Birch 28,000	70.71
Red oak 6,200	72.58
Sugar maple 5,000	30.00
Spruce 5,000	37.00
Basswood	35,00
Madeira 1,600	168.75
Teak 1,000	225.00
Red cedar 500	44,00
Rosewood	400.00
Total	\$ 12.41

The use of wood is not highly diversified in the state. Only seven industries are of sufficient importance to be separately considered, and a number of others are grouped as miscellaneous. Cypress is the only wood appearing in every industry. The table which follows lists the industries, shows how much wood is usel annually by each, and the average price paid for material:

SUMMARY OF WOODS USED BY INDUSTRIES IN FLORIDA

	Quantity used	Average
	annually	rost per
Industries	Feet b. in.	1.000 ft.
Planing mill products	407,712,007	\$ 11.64
Boxes and crates, packing	55,589,000	9.82
Sash, doors, blinds, and general mill work	35,856,500	15.49
Boxes, tobacco	9,616,235	21.93
Car construction	8,545,588	18.76
Miscellaneous	2,064,271	32,50
Ship and boat building	1,591.100	38.38
Vehicles and vehicle parts	167,095	56,02

The report says that Florida is doing what other Gulf states are doing; that is, cutting pine and cypress and leaving the rest. These species are most abundant, and under present conditions there is more money in them than in the smaller and more dispersed hardwoods; but the people of Florida should not lose sight of the fact that they have a rare lot of hardwoods and that there is a good market for them if pains are taken to reach that market in the right way.

More than ninety-five per cent of the wood now passing through Florida's factories is pine and cypress. These species are exploited at the expense of all others. While they last they will make the lumber business profitable, but when they are gone the woodworker's attention will turn to what is now being neglected—the hardwoods

Florida appears to be suffering more from forest fires than most of the southern states. The fires are small and slow. They do not attract much attention as they creep along among the pine, but they get in their deadly work no less surely, though more slowly, than the forest conflagrations which wipe out many square miles in one stretch. The traveler in Florida, almost anywhere outside the boundaries of the swamps, is soon accustomed to the sight of long lines of fire which keep close to the ground. The blaze may not be more than a foot high, but when it has passed it leaves every tree seedling dead. The saw palmettoes, which nearly always cast a low shade to protect the ground, are scorched brown wherever the fire touches them. They may sprout again the next year, and tree seedlings may come up again, but the fire will follow, and every visitation leaves the ground more barren. No forests will stand fire indefinitely, and Florida's forests in every part of the state are showing the results of burnings.

The report suggests that the numerous hardwoods, though their average size is small, will attain an important place in the future

events not to the monate, the of articles or small size. A testate of the late process of consecutives, few of which are now many factories, the tate A 1 to to 165 woods is also given, as 116s pective sources of material for the following articles: Athletic goods, balls, billiard cues, brackets, brush backs, canes, carved ornaments, castors, chairs, clothes pins, curtain rings, dyewoods,

easels, games, grifles, handles, inlay, insulator pin, knobs, manicure sets, marquetry, mathematical instruments, medicinal extracts, musical instruments, pallettes, panels, parquetry, picture frames, rulers, shuttles, small furniture, souvenirs, spindles, sporting goods, toys, trays, turnery, umbrella handles, veneer, and many kinds of wooden ware.

Editor's Note

The following paper was read by J. W. Gleason of the Goodman Lumber Company, Goodman, Wis, before the noting of the Michigan and Wisconsin loggers at Green Ray on Saturdey, December 6. The article is here with printed in the beheft that the horse as a logging factor will always to importance either in connection with the operations of steam logging matchinery or where the employment of such methods is not practicable.

I deem it a privilege and an honor of no small consequence to be selected to appear before this honorable body to discuss a question that, no doubt, many of you have given considerable thought.

To the modern logging operation in Wisconsin and Michigan the horse is an absolute necessity. Good machinery is very important but more important still is a good force of able-bodied horses. Efficiency is the greatest requirement—a term which applies to every branch of the logging game.

My experience has been that too little attention is given the care and handling of horses in the lumber woods. In the old pine days or before modern methods were known, horses were worked during the winter months and turned out to pasture all summer to recuperate. Everyone had the idea that they could not do any logging unless they half killed their horses. A man was not considered a teamster unless he could make a team eat three bushels of oats every day and could pound them on the head for eighteen or twenty hours every day. There are more horses ruined by overfeeding than by any other cause. In that respect the average teamster of today is like the newly married young lady who, upon entering the meat market, was asked: "How much steak do you want?" she replied: "I don't know whether I want a pound or a whole cow." The teamster does not know whether a horse needs a quart of oats for supper or a whole bag full. To get the best results, horses should be kept in good condition. Their teeth should be gone over at least once a year by a competent veterinary. We keep a man at each camp whose sole work is to look after the horses. He feeds them three times a day; keeps the barns in good sanitary condition; looks after the harnesses, in fact everything in connection with the horses, and he gets to know every horse. He is the only one around the barns who has access to the oat bin and the harness room. We find that by having one man in charge who has gained his knowledge by actual experience we get better results. It eliminates, to a certain extent at least, acute diseases such as spinal trouble, cholic, etc., which are common among horses. We buy the best oats and hav; feed bran only once a week (Saturday night) and we do not feed any stock foods of any kind whatever. We work our horses all the year around-or an average of 300 days of ten hours each. Will give some facts and figures to show what horses can accomplish if properly cared for and handled.

We operate two camps, having twenty-four teams in the logging service, or twelve teams in each camp. One team is used to haul water to the horses and lunch to the men; one team is used for railroad work exclusively. This leaves ten teams in each camp to do the skidding. They do not do any loading as we operate two McGifford loaders. The following includes the two camps or twenty teams skidding 312 days, or 6,240 days for one team: Logs, Doyle scale, number of pieces 228,349, 13,948,550 feet, which tallied over the trimmer board measure 21,090,562 feet; 12,578 cords of four-foot chemical wood (birch and maple); 1,754 cedar telegraph poles and 8,569 cedar posts.

I will give you the different items of horse feed, etc., and what they cost—in other words, what it costs us for horse flesh and the amount of work done. We value the teams at \$600 each or

\$14,400. One thing we have learned by experience is that the average life of a horse, in the lumber woods, when worked the year around, is from four to six years, and one thing we do claim is that to keep a man driving a team that is broken down is awaste of human energy, which is the most expensive commodity that is used today in every successful lumbering operation. Human energy and brains go hand in hand; no lumbering operation is successful without both.

Deprecia	ticn into	erest, e	Le., 2	5 per	cet	ıt	 	 	8	3,600,00
Oats con	sumed	11,395	bush	els			 	 		4,899.37
Hay con	sumed	196 10	n<							2,828.70
Bran cor	istimed	12 ton	S							218.30
Veterina	ry servic	es and	medi	cine.			 	 		221.00

\$11,767,37

These figures are absolutely correct for I made them myself. Our company has the best accounting system under the sun. It does not use the old debit and credit system; it just charges everything and credits nothing. We have a little accounting system of our own in connection with the woods department: Supplies purchased, supplies on hand, inventory every month, distribution of labor, material, etc. We don't wait until the fifteen or twentieth of the following month to see "where we are at," for about that time the general manager calls a fellow in "on the carpet" and shows him a little slip of paper containing some figures, then he straightens up in his chair and says: "John, it is costing too much to log; too much to build railroads; too much to feed the men, and this, that and the other thing are costing too much," and nine cases out of ten a fellow has to sit there like a bump on a log, not knowing what to say, so the only way is to keep an accurate tab on everything as you go along and when you find that anything is costing too much "cut it out" before the boss gets next

AVERAGE COST OF LOGGING PER M FROM NOV. 1, 1912, TO NOV. 1, 1913.

	DOF	LE S	CALE,	12	MONTHS	
Sawing						 \$1.10
Swamping						 75
Skidding						 1.28
Loading						
Tools and repairs						
Depreciation, horses, ec	quipn	aent,	etc			
Roads and spurs						 1.00
Supervision overhead .						

\$5.83

The average cost according to the general books for ten months, everything included for the twelve months, Doyle scale, \$5.94. The difference between Doyle scale and lumber tally was forty-four per cent, so that the net cost for the ten months was \$4.13, lumber tally over the trimmer.

We may not like them, but just the same we have to face and comply with workmen's compensation laws. So it pays to know just what and when they are.

As a first aid to steam boiler efficiency when the colder weather comes try a round of cleanliness—inside and out.

Conservation means one thing and preservation means something else, but the difference is not always plainly seen by some.

Some Fallacies of the Forest

ARTICLE TWO

Does the sap ever go up or ever go down in a tree? Does the trunk contain more of it in summer than in winter? Does it flow upward in spring and down in the tall? These three questions are really the same one asked in a slightly different way each time. Most people will answer with a plain yes or no; and probably nine out of ten will say yes.

The majority rules in politics, and if it ruled in the same way in science, the question would be speedily settled. There is a pretty broad difference between ruling and proving. Matters are ruled by the ballot in politics; but in science they are proved, and until there is proof, nothing is settled. The vote of the whole world, or as much of it as cared to vote, was against Galileo, yet the question of the movement of the earth was finally settled his way. Most people say that a tree's sap goes up in the spring and comes down in the fall, but is that really what happens?

It ought not take long to make a rough test. Are green logs any lighter if cut in dead of winter than in the height of summer? The scales fail to show it. If summer cut logs weigh 10,000 pounds to the thousand feet, log scale, the same kind of logs cut in winter will weigh about the same. If the sap goes down in the fall the winter logs ought to be lighter by several thousand pounds, since it is well known that green wood is nearly half sap.

The sap of a tree is not exactly the same thing to all people who think of it; but the usual conception is that it is the liquid contained in the trunk, leaves, and branches. That definition is accurate enough for practical purposes. The water finds it way into the trunk through the roots—with slight exceptions in some instances. The fine hairs on the roots pull the water out of the soil and start it up the trunk through minute vessels which constitute the structure of the wood. It makes its way to the remotest branches.

It is an old and homely, though un-scientific, saying that "whatever goes up has to come down." The water that goes up a tree trunk comes pretty nearly being an exception. Of course, it comes back to earth sometime, since it does not stay up the tree forever, and does not go off into planetary space; but it does not come back by the paths it followed in ascending.

The sap that goes up a tree is soil water. It contains certain earthy ingredients in small amounts. Much of it enters the tree's leaves in summer, where a sort of chemical laboratory is at work, and the water and whatever else it contains are used in manufacturing food to build up the tree, add on new wood, and supply a reserve for the time when the leaves will not be in the manufacturing business, that is, the next winter.

In making this food, the leaves get rid of a lot of the water that came up from the roots. It passes out through minute openings in the leaves and is evaporated, going into the air to be blown away. Most of the water that goes in through the roots, passes out through the leaves, and that is the last of it, as far as that particular tree is concerned. It "goes up" but it never "comes down."

Though most of the water escapes through the leaves and disappears, the residue makes a longer or shorter downward journey in the summer. The plant food manufactured in the leaves must be carried to the places where it is needed and the remnant of the water is utilized for this purpose. The starches, sugars, resins, etc., produced in the leaves are carried downward through the trunk to be deposited just beneath the bark where they form the new layer of wood. This new wood forms all the way from the roots to the twigs, and the water or sap distributes the substances that produce it. A very small part actually may return to the ground whence it came, and to that extent the sap may go down, but even that small part does not go down in the autumn, but in the summer, and most of it pretty early.

The water, laden with food materials, that starts from the leaves downward, nearly all disappears in the course of its journey. When a particle of this water (which during its downward journey is properly called sap) gives up its load of starches and the like, it is no longer of any use to the tree, and is gotten rid of by being forced out through small holes in the bark, called lenticels. Quite a large amount of water thus passes away. The lenticels of some trees are conspicuous objects on the bark. Young birches and cherries show their location by horizontal markings from half an inch to a couple inches in length.

The circulation of sap in the trunk and branches of a tree is chiefly through the sapwood and the bark. The interior or heart-wood is practically dead, though it is always filled with water, more or less. The amount of water which rises through a tree's trunk seems to be largely dependent upon the quantity the leaves can use in their processes. The leaves generally have all they need, but such is not always the case. In long periods of drought the roots may fail to send up enough water to supply the leaves. In that case, the leaves may wither or fall prematurely, and the tree's growth will be retarded. At any rate, when the leaves fall, whether prematurely or not, the water in the trunk practically ceases to circulate, although some change from place to place occurs. It is certain that no general retreat down the trunk to the roots takes place, such as is supposed by those who speak of ''sap going down.''

Gravity appears to produce little effect on the sap. At least, it is not able to pull it down after the action of the leaves ceases to pump it up. It is not much out of the way to state that when the activity of the leaves ceases in autumn, whatever water is in the tree at that time lies inert until the following spring when the opening leaves again begin to lift the water by means of their billions of little pumps, and the whole process begins anew.

Though the wood of a living tree contains a large amount of water at all times, it does not usually flow out when a cut is made into the wood; though certain trees, as maple and birch, lose a considerable quantity of water if the trunk is cut in spring. That is popularly supposed to be due to the "rising" of the sap. It does not appear to be wholly certain just why the flow comes at that time, but it unquestionably begins before the frozen soil about the roots has thawed sufficiently to admit ground water to start up the trunk. The matter can be tested by building a fire against the trunk of a maple tree in dead of winter. As soon as the wood near the fire is thawed, sap will flow from a wound. Pioneer settlers sometimes made small quantities of maple sugar in mid-winter by building fire to warm the wood, though the roots were frozen solid. Evidently the sap was in the wood, and did not get there by rising from the roots after the fires were built.

When weather is warm, leaves of nearly full size, and everything favorable, water ascends the trunk of a tree quite rapidly. The rate varies greatly, and many measurements have been made. Proof of the quickness with which the water goes from the base to the highest branches can be had in early summer by girdling a vigorous young red oak, cutting entirely through the sapwood all round. In a very short time the leaves begin to wither, indicating that the water supply is failing. When hardwood trees are being cut while in full leaf the rapidity with which the failing sap supply is shown by withering leaves is an interesting study. Some kinds show the effect within a few hours, others do not wither for several days. The soft woods, such as pine and hemlock, seem to feel the effect of a cut-off in the supply only after many days.

When a tree in full leaf is cut down, the leaves go on pumping water from the trunk and discharging it into the air, until the supply in the trunk is reduced so low that the leaves can draw in no more of it. Then they wither. The wood of a fallen tree can be partly seasoned by leaving the trunk untrimmed for a few days thereby giving the leaves time to draw the water out of the wood. The quantity thus extracted is measurable, but it is only a small per cent of the total water in the trunk. As soon as the quantity is slightly reduced, the leaves are no longer able to obtain any more.

which cause it to no so, are subjects for controversy among botanists. Much is known on the subject, but some things have not yet been found out. In time of excessive drought the leaves on a tree may wither though the trunk contains a large amount of water. The trouble seems to be that the water in the wood has been slightly reduced in quantity, and the slight reduction is sufficient to upset the function of the tree's circulating system, and the foliage dies of thirst, almost in the immediate presence of water.

The movement of the sap is seen, therefore, to be an exceedingly delicate and nicely balanced process. The greatest botanists never tire of investigating its mysteries and hidden forces; and the general opinion of these investigators is that a far-reaching discovery is writing for some one to make it known. Where is the pump in the hair-like root of a tree that will start the water up a trunk a hundred feet tall, and hold the tiny column of liquid and urge it up-

ward against a pressure three-fold greater than the earth's atmosphere? What sort of apparatus is it within the interiors of the hollow cells and iters from the bottom to the top of the trunk, which keeps the water going up after the roots gave it a start? What power have the interoscopic orifices in the leaves that they are able to draw water up against a force of gravity so great that the strongest suction pump on earth cannot overcome it? When the water has arrived at the topmost leaf, what mysterious machine reverses the direction of movement and starts the manufactured food back down the twost. limbs and trunk, working with gravity now instead of against it as before?

These are some of the questions more easily asked than answered. Some may dispute one point, some another; theory is pitted against theory; but the undisputed fact remains that the sap of a tree circulates by amount and under the influence of forces not yet fully understood.

"You Can't Teach Us Anything"

How many times do you hear that said? Just picture the man who says it; the man who has grown gray in experience; the man who has won his way to success by sheer force and energy. Yet, that is just what most men will say who read this, and they will probably add, "It can't be applied in the lumber business."

In considering the progress of the lumber business in the last few years it is safe to say that with but very few exceptions no big ideas with a really broad bearing on the development of the industry have been offered. Lumbermen themselves will admit the truth of this statement. Lumbermen as a whole seem to be more satisfied with present methods and less ambitions as to the development of the industry to its fullest efficiency than the members of any other large body of business men. The difficulty is that the opportunities offered have been too alluring and the necessity for the employment of advanced ideas has not been felt. The trade is showing some evidence of the realization that the lumber business of the future will not be the lumber business of the past and that the education of the future lumberman will not be along the old "rule-of-thumb" lines but will be the result of the incorporation of the best points in other lines of industry with the sound practical knowledge of the lumberman himself. This trait of seeking outside for information and knowledge has never been strongly evident among members of the lumber trade. A good illustration is seen in the attitude of those attending lumber conventions. Generally speaking there is a preference for talking with fellow lumbermen with the hope of trading a couple of cars rather than to give close attention at all sessions in order to secure ideas that will result in the sale of many cars.

If you will think about it, and view the situation from an impartial standpoint, you will find that some of the things that are needed are: first, a country-wide advertising campaign; second, standardization of grading (one set of rules instead of two); third, we need some industrial and efficiency engineers in the lumber business and these most of all, for when the efficiency idea is introduced, and applied, the other things have to follow in order to keep up with it.

Honestly, now, do you think that lumber is manufactured at the lowest possible cost today? The answer is no! Can the capacity of a sawmill be increased without additional cost per thousand feet? Yes! "But," you say, "these methods must take additional machinery, and how can you say, with increased capacity I will have a lower cost?" There is the meat and substance of it. Now right here, we are going into economics, and from that, lead back to the above statement.

Capital (not money, for that is only a medium of exchange) is represented by machinery and materials of production. Now, proceed to the direct or capitalistic. Prof. Meade of the Wharton School of Finance illustrates this very nicely with a simple illustration: "A man requires drinking water. The spring is some dis-

tance from his home, but there are several ways in which he may supply his daily wants. First, he may go to the spring each time he is thirsty, and drink out of his hollowed bands. This is the most direct way; but it is inconvenient, for he has to go to the spring every time he is thirsty. And it is insufficient, for he can never collect and store any great quantity, such as he requires for various purposes. Now he may take a log of wood, and make a pail to carry his day's supply. This is capitalistic production, but indirect for he has to make the pail. However, the result is greater and a saving of time. Then there is the third way, in which he fells a number of trees, splits and hollows them, lays them end for end, and so constructs a tunnel, which brings a full head of water to his cottage. Here, obviously, between the expenditure of labor and the obtaining of the water, we have a very round-about way, but the result is ever so much greater. The man need no longer take his way from the house to the well, but a constant supply of water is at his door. This is what is called highly capitalistic production, although it is but a simple illustration. In the second instance, it would be called production on a small scale, and in the latter instance it would be called large-scale production.

With hardly any exception, lumber production today is comparatively on a small scale. No—don't take exception to that last statement. It isn't the amount of feet per day that a man produces in his mill—it is the amount he can produce if he applies the economies of production. Most lumber production is practically on a direct or small-scale production basis. Large-scale production is indirect. The more indirect, however, the greater can be made the efficiency, because of the increased number of operations and the resultant greater division of labor, and thus, in the end, with each man specializing (doing one thing and naturally becoming proficient and working with greater dexterity), the greater will be the output.

Getting back to the original question: You can increase your output by going in for large-scale production and applying efficiency. Usually more capital will be needed (machinery), which will result as we have said before, in the greater division and specialization of labor, better routing, re-designing of sawmill machinery, but increased output at practically the same operating cost means a lower cost per thousand and a lower overhead cost per thousand—see it now? You understand, of course, that all of the above relates to the hardwood industry. A mighty good example of efficiency can be seen in Louisiana, in a big yellow pine mill there which you probably all know.

With the increased efficiency, and the larger output, the more the waste, but—here is one of the big losses—what are you going to do about this waste? Is this ever-increasing item to be left alone, or is it to be thought out? At the present day it seems, in view of the conditions that exist, if it is left to the lumberman, it will never be

thought out. It took a man in the Forest Service to think out the destructive distillation process. But this is not the only use for the waste. The greater the product the greater is the chance for experimenting, but who will be the first to do it? It looks as if it will be the same old story of each man waiting for the other. Result—progress retarded.

The losses are not only in manufacturing. There are losses in the handling from the mill to the yard, then in the shipment, poor systems which waste time, unintelligent handling of sales correspondence, lack of tact and courtesy as well, but greatest of all, lack of study and the getting of a broad, all-seeing viewpoint—the ability to "get out of the rut;" to look at your plant, your business and the lumber business in general from the point of a customer or a stranger, in another line. Lumbermen are too close to the lumber business. They should go out with an open mind and talk with men in other entirely different lines and visit other industrial plants making other products. That's the only way to get new ideas that can be applied to the lumber business.

What do you know about labor conditions outside of your own mill, and outside of what possibly Jim Smith or John Jones, the other lumbermen in your vicinity, tell you? This means labor in general, and it refers to the taking up of questions such as: What man is best suited for this job? What class of foreigners are best suited to other jobs? Upon what does a man's physical efficiency depend? What race of men are best suited for rough handling? What race for the finer work and for this, that or the other thing? These are questions that the ordinary lumberman will probably laugh at, but do you know that in the biggest industries we have today, the heads think so much of them that they employ specialists to just interview men and fit them in jobs? Yes, just ordinary labor. This means the making of a good organization.

Go into almost any sawmill or any lumber operation and you'll find that most of the men are paid the same wages. "Well, why shouldn't they be?" you say. You pay a man either for what he knows or for what he does (or at least you should). Now labor is either mental or physical. It is almost impossible to divide the line between the two, however, as even the most ignorant foreigner puts a small amount of intelligence into his manual labor.

Applied to the lumber business there are many men around your mill who have an unusual amount of brains and who are working simply in an ordinary job. On the other hand in the jobs where more brain-work is required, you probably have some men who don't use their heads as much as they do their hands. Don't you know that by putting the men who use their heads in the more important positions and using the ordinary laboring man for the job that doesn't require much head work, you can increase your efficiency in the plant? This fact should be kept in mind—use skilled labor for the skilled work and use cheap labor for the handling. In other words, get the basis of organization in this way and when you get good results from your skilled men, speed the work up; the cheap labor you can duplicate if they do not keep up in the handling.

In general, the lumber business must call a halt, recruit men from outside with their knowledge of the specialized features of modern business and industrial organization to work in with the lumberman's practical knowledge. Industrial and efficiency engineers are needed most of all, and lumbermen must not stand in their own light and say, "We never did it that way," or "you can't teach us anything."

Efficiency is new to lumber, but is three or more years old to other lines of trade. You watch the banking circles, in either times of panics or booms, because you depend on them to some extent. Yet, banking is a different industry. Why aren't you watching other lines of trade as well?

The judgment day for the lumbermen is coming. A few will see the light quickly—the majority will sit and wait.

The field of consumption of hardwood lumber narrows each day. We have been content to sit by and let the cement people and the steel people eat into our sales with their products. And they have won their way by keeping abreast of the times, by using aggressive

advertising and other forces. The last of your car plants is going over to steel, and soon there will not be a wooden ear manufactured for any of the beg railroads. The cement people are advertising stronger than ever. Manufacturers of steel doors and interior steel trim are every day strengthening their positions, and yet you lumbermen calmly sit by and wonder why sales are falling off! In this respect, much is to be done individually, but a stupendous task is before us collectively.

Are you one of the "You can't teach us anything" kind, or are you going to do your share individually and then collectively as well?

H. E. S.

New Ocean Freight Rates

The ocean freight rates for the new year have been announced, and in many instances lumber and log exporters have entered into contracts for their shipments during 1914. In the main the rates are the same as those that prevailed throughout the present year, though some changes will be put into effect. These changes affect hardwoods in particular, though all others are taken in. Under the new tariffs from Baltimore and Norfolk to ports in the United Kingdom the rates on lumber 18" to 23" wide, and an inch or less in thickness, will be about ten per cent higher than in 1913. On lumber 24" and upward and for all thicknesses and all kinds of lumber, the increase is twenty five per cent. The flat rates are the same as those in force now. Exporters feel that the additions made are not warranted by the situation, but they signed contracts to prevent any possible impairment of the service. It was feared that if the shippers generally held back, the steamship companies might proceed to divert vessels to other ports, materially reducing the sailings, and so curtailing the facilities for shipment that the exporters would stand to lose more than they could possibly hope to gain. It was this consideration that prompted entering into commitments on the basis fixed by the steamship companies. The expectation is that while the rates might and should have been lower, they will not prove prohibitive, and that the general trend of prices will put the exporters into a more favorable position than that which they have occupied for months.

The statement of exports for November, compared with the corresponding month of 1912, is not calculated to afford much encouragement to the shippers except as an indication that stocks abroad must be getting quite low, the period of recovery being thus brought nearer. The statement shows that November must be added to the other months of 1913 conspicuous for a shrinkage in the forwardings to foreign countries, the total value of the exports being only about half of what it was a year ago, when it was \$283,955, against \$148,357 this year. Among the items in which the shrinkage chiefly occurred, oak must again be counted well near the top of the list, with oak logs also short and walnut shipments much lessened, but with an actual increase in poplar, and in the miscellaneous shipments designated as "all other kinds of lumber." There was a heavy decline in the shipment of staves and headings, the biggest item, however, being spruce from West Virginia. Of this wood not less than 2,568,000 feet was exported in November, 1912, against only 13,000 feet last month. Among the comparative figures are the following:

are the rono ming.	19	LO.	131	rid.	
	Quantity.	Value.	Quantity.	Value.	
Logs, Hickory	92,000 Ft.	\$2,660	71,000 Ft.	\$2,600	
Logs, Oak			29,000 Ft.	1.145

Some Wrong Uses of Hickory

The most common arches as of tackety occur when it is employed where other less valuable whose end ind the places as well or better.

It has long to an account of phot a in some places to take the most convenient wood, whether it was good or bad, and whether it was suitable or not, and stick it in anywhere that it would miswer. The custom is not so common as it once was because markets are better, and people have more correct ideas on the subject; but hickory still goes into wrong places.

It should never be made an ordinary timber. It is too valuable for that; has too many special and particular places to fill, which can be filled by no other wood as well. It ranks above all competitors for certain purposes, and it is waste, extravagance, bad management and poor judgment to degrade it to a level with inferior timbers by making it serve in ordinary and common places with them or in their stead, If it were so abundant that everyone could have all he wanted, it would be different; but that is not the case, and while some are practically throwing hickory away, others are obliged to pay high prices to get what they want, or unwillingly substitute some inferior material for hickory. The business is not balanced properly, or the hickory would go to its proper markets, and cease filling common places which almost any other wood might fill as well.

A specific bill of some of the particulars will illustrate this better than it can be done by commenting on generalities and formulating a lumberman's "ten commandments of shalt nots," as a guide to how not to use hickory.

Small rural mills in the whole hickory region, which means practically the eastern half of the United States, cut hickory logs at haphazard as they find them in the woods, and most of these logs are ripped into lumber and, unless a special inquiry is made, that is the last heard of this lumber. It seems to be 'flost in the shuffle.'

Three years ago Charles F. Hatch, of the United States Forest Service, went to work to find out what was becoming of this lost hickory. The study which he carried out was one of the most thorough investigations of the kind ever made in this country. He visited all of the leading hickory centers of the country, went into the woods from Louisiana to North Carolina, spent much time at small mills, watched the shipments of hickory, followed it to farms, factories, mines, and wherever else it went, and obtained a stock of information of the greatest value in locating the ultimate destination of the courtry's hickory output. He studied right uses as well as wrong, and he presented the most complete statistics ever compiled on the subject.

In the first place, he found that the sawmill cut of hickory, as reported by the Bureau of the Census, did not show much more than half of the total annual output. The equivalent of 22,000,000 feet a year is burned to smoke meat. The quantity cut for fuel, aside from what is burned for meat smoking, amounts to hundreds of millions of feet; but the fuel figures were only estimates based on the best guesses possible after studying the whole field. Nobody measures the hickory that goes into cordwood, mixed with other species, throughout nearly a million square miles of territory; but the total amount is enormous, and the estimate that it equals in quantity the sawmill output of hickory lumber is believed to be very conservative.

As far as the practice of converting hickory waste into fuel is concerned, it is to be commended; it is a correct use. Tope, limbs, knottv logs, and scraps that are good for little else, fulfill their highest destiny when used as fuel; but too often the cordwood cutter cares nothing about anything except his immediate profit, and he splits the finest hickory logs and stacks the billets with limbs, knots, and cuttings of various inferior woods, and the whole rick goes to the woodshed at so much a cord. Little the brick burner cares as he shoves into his kiln the hickory pieces which would make axe handles, buggy poles, sucker rods, or any other high-class product for which the best hickory is in so great demand. Good split hickory—none better ever grew—is used as smudge in smokchouses to keep skippers out of meat. Scraps would make as good smudge, and many woods besides hickory will answer. A bad practice, once firmly fixed, is hard to break up.

The scatterest control of hickory timber is responsible for much of this wrong use. Men are not generally pirates—using and destroying without carring for the difference. They do not wantonly destroy, but do it without thinking, and often because they cannot conveniently do otherwise. Hickory is scattered. Forests of it do not exist. From 200 to 400 feet per acre is the limit in large areas. There is not enough to pay the millman to handle it in any way except to let it take its run through the mill with other logs, and go to the same markets with other mill run stuff. That is why so much hickory goes to the wrong place. Specific instances where it has been found in common use—wrong uses in every case—follow: Bridge floors, barn floors and siding, grain doors, fences, piling, culverts, crossties, car stock, mine props, trainroad rails, cribs and wingwalls in dams in streams, lagging for mines, and detricks for oilwells.

Hickory is strong but decays quickly when exposed to weather. In many of the uses listed above it will not give as long service as the most common and roughest grades of oak, and therefore is not as good as they for those purposes. It is mighty poor policy to make bridge floors of wood good enough for golf clubs, or build bridge piers of stuff suitable for carriage poles or picker sticks.

Grain doors are the roughest, cheapest kinds of affairs. They are used to set inside of hox cars, across the doors, to prevent grain from leaking out in transit. The cheapest lumber that will hang together, sap pine, sap poplar, buckeye or almost anything, will do. Hickory is monstrously out of place in such situations. It is like working a race horse in a mud cart where any old plug will do the work as well.

Building fences of hickory is even poorer business, because when the wood is alternately exposed in its raw state to rain and sun it not only decays quickly but is liable to warp out of shape. Few worse fates could be fall hickory than to lay it as crossties. It is one of the poorest woods for such a place, unless treated with preservatives, and it is then no better than beech, maple, and elm. Fortunately the railroads, simply as an act of self defense, discourage the use of hickory for crossties, and doubtless this dislike for it causes some of the wood to find its way into more appropriate places.

The most noteworthy instances of the employment of hickory as mine timbers are reported among the coal operations in Pennsylvania. Props and lagging are expected to remain in use only a short time and are then abandoned in the worked-out portions of the mines. The hickory rots, crushes, and the mine roof caves in, burying the useless wood forever. Perhaps two or three months in such situations is all the service it gives. Had it been made into single trees and pick handles it would have remained serviceable for years, even in mines.

In the oilwell regions of Pennsylvania and West Virginia it is no uncommon thing to see derrick floors made of two-inch hickory planks, cut on a neighboring portable sawmill. The largest and best trees go to that unworthy use as readily as scrub oak or knotty pine. The millman rips out the planks, gets his price for them, and he has a clear conscience; the operator pays the price, places the planks as a mud-coated, grease-spattered floor, and his conscience is also clear. Yet, that same operator will send all the way to Arkansas to buy hickory sucker-rods thirty-five feet long, paying for them at the rate of \$200 a thousand feet; and at the same time he has better material in his derrick floor for which he paid twenty dollars a thousand, or less.

Thus, in big business as well as small, hickory is sacrificed to mean purposes. It is too good a wood for that. Every tree is needed by the industries which put the material to its best use. The alarm of searcity has been sounded a long time, and it has been no false alarm, though the country still has a large supply, but it is widely scattered. The misuse of a tree here, and load there, and a cord somewhere else, amounts to an enormous total. In short, it is not improbable that more than one-half of the hickory cut from year to year is wasted by being wrongly used; and this is the world-famed "indispensable wood."

THE SPOOL MILL AND THE PERMANENT SHEDS

CORNER OF THE YARD AND TEMPORARY ROOLS

Manufacturing Spools in Finland

Editor's Not

Tinland and the New England states are competitors in the nanufacture of speeds, and together they supply a large part of the world's markets. The material used in Finland is white blich (Retala athar); in New Lugland it is paper blich (Retala appuntara). The trees are very similar and two dominate alike in appearance and grain. Methods of nanufacturing differ. Henrik Cronstrom, who is associated with the largest speed method, in Finland and probably the largest in the world, is traveling in the United States studying manufacturing machinery and methods, and the article which follows is based on information furnished Hamawoon Rivourb by him while in Chicago early in December. The establishment which he represents is the Aukticholaget Kaukas Fabrik, Heisingfors, Finland. That city is about two hundred miles west of St. Petersburg.

The habits of the white birch of northern Europe resembles those of the paper birch in America. Both are quick to take possession of vacant land into which areas their winged seeds are carried by wind. Some of the largest birch forests of Maine and the adjoining regions occupy ground laid bare by fires years ago. The white birch of Finland is cut chiefly from stands which have taken possession of abandoned agricultural land. The logs which go to spool factories in Finland average a little smaller than those which reach to factories in Maine. The Finland birch ranges from diameters of four inches up to sixteen, the average being about ten

Most of the large forests of Finland are within reach of navigable water in summer. In winter the severe climate closes all navigation. The timber is cut in winter there, as it is in this country, and is hauled to landing places where it can be loaded on boats the following spring.

The logs are cut into lengths approximately six and a half feet long. They are peeled as they are cut, but the peelers leave marrow rings of bark on the logs, about an inch from each end. It has been found that this prevents checking. The small checks may appear in the ends of the logs and extend back until they reach the band of bark, and they go no farther. Inch cuts from the ends of the logs are thrown away, thus getting rid of discolored wood and the checks.

The usual proportion of red heart in white birch trees appears to be less than in the trees of paper birch. It is so small that no effort is made to put it to use other than as fuel, while in this country the red hearts are used for brush backs and other purposes.

The Finland spool manufacturer takes good care of the logs when they arrive at the factory. They are carefully cobbed, and are covered with temporary roofs, or they are placed under permanent sheds, such as are shown in accompanying illustrations.

The logs are air-dried from one and a half to two years. Sap staining gives little or no trouble. The cutting and peeling are done when the weather is very cold, and before warm weather the surfaces of the logs are too dry for fungus to gain lodgement. It is found, however, that if logs are not peeled the wood is soon damaged by stain.

The process of converting the log into spools differs radically in

MANNER OF PILING WHITE BIRCH SPOOL LOGS.

BIRD'SEYE VIEW OF MILL, YARD, AND HARBOR

Finland from the method used in this country. Here the logs are severed in the squares which are severed and subsequently passed through the lathes. No squares or lars are saved in that country, but the log is cut into bolts, or disks. Blanks the size of the spool are cut out with a boring machine. The man who does the cutting rejects knots, red heart and other defects, to the end that time may not be wasted in passing through the lathes the wood which could not be made into perfect spools.

The same operation that cuts the spool blank from the bolt of wood bores its center. The hole facilitates the subsequent seasoning. Up to that point no kiln drying is done, but the blanks, which represent spools in the rough, are then sent to the kilns where they remain until their moisture is reduced to ten or twelve per cent. The spools are expected to remain at about that degree of dryness in actual use. If made dryer before being passed through the lathes the wood will subsequently absorb moisture from the atmosphere and will swell out of proper shape. If not reduced to that state of dryness, seasoning will continue after the spools are finished, shrinkage will occur and the work will be unsatisfactory.

Few kinds of woodworking are more exacting than spool making. The spools must hold exactly the required number of yards of thread. The looms and other machines which use them are adjusted so delicately that the least variation in size causes trouble.

Two kinds of machines are in use for making spools after the blanks have been cut, bored and properly seasoned. One is operated by hand and produces from 12,000 to 14,500 per day; while the daily capacity of the automatic lathe is from 20,000 to 30,000. The yearly output of the Helsingfors factory is 288,000,000 spools.

The use of birch for spools is not accidental. Few woods answer for the high grade spools. They are turned on the lathe at a speed so high that many woods could not resist the centrifugal force which tends to tear them to pieces. From 5,000 to 6,000 revolutions a minute are required. Birch is very hard, yet it does not dull tools like many softer woods. That is an important consideration.

Birch is cheaper in Finland than in this country. The average cost there is usually under four dollars a cord; in Maine the average exceeds seven dollars.

The articles manufactured by the processes described in preceding paragraphs are termed "yellow spools." The "white spool" is for silk, and its process of manufacture is somewhat different. The wood is cut in winter, the same as the other, but the work is hurried through. The blanks are cut from the green wood, and kiln-seasoning follows.

The supply of birch timber in Finland is large. There are still prime al forests in that country as well as extensive stands occupying land which was once under cultivation.

The Lumbermen's Round Table

WHEN CANCELLATIONS HURT

One of the principal faults of the business as at present conducted is the tendency to cancel on slight provocation. Few buyers regard themselves as bound by an order in case they find they can do better elsewhere, and many a lumberman who has been figuring on using a block of stock in a certain shipment, and has declined other business because of it, has found himself holding the bag when the buyer wires to cancel.

This is particularly rough, however, on the dimension man, inasmuch as stock made up for one particular concern, according to its list of cuttings, is obviously not suitable for somebody else. Yet the irresponsible consumer now and then forgets this, and proceeds to jump over the traces if he finds that he could save a few dollars by having the work done somewhere else.

A concern in the dimension business was forced to call a halt some time ago when a customer tried to wriggle, although the order was already being put through the mill. It took a vigorous lecture on the facts of the situation to make the buyer understand that the business had to stick.

CONVEYORS FOR THE VENEER MILL

A manufacturer of sawed veneers recently made a suggestion which sounds good, although there may be some question as to its practicability which only actual experience could indicate. His idea is to get rid of the offbearers required for veneer saws at present by substituting a belt conveyor which would take the material from each saw and carry it to one man, who would be charged with the duty of inspecting and handling it, or trimming it if it were to be cut to any special dimensions.

"The offbearer is an expensive helper," said this manufacturer, "and is often unreliable. Many a time I have had a saw tied up because the helper didn't arrive at the mill after a holiday bout with King Barleycorn. By substituting mechanical means of handling the stock we would get rid of the offbearer and at the same time do the work more cheaply than at present."

Veneer men who have considered the suggestion believe that it is a good idea, but some of them are inclined to doubt whether it would work out in practice.

FIREPROOF PLANTS GROW IN FAVOR

A lot of people in the lumber and allied lines have learned that it pays to spend a little money to make the plant as nearly fire-

proof as possible, and many sawmills have been put up in the South of late which are almost, if not quite, fireproof. Steel and concrete are the favored materials, and while the original cost is somewhat more than in the case of mill construction, the saving accomplished through the reduction in insurance rates is in itself a factor which makes the improvement a good investment, as a rule.

A veneer man in a southern mill town recently put up a plant which is just about fireproof. It has concrete foundations and floors, reinforced concrete walls, steel and concrete roof slabs and a dryhouse that is built of steel and concrete for the most part. The manufacturer considered the whole proposition with the fire insurance people, asking them to make suggestions as to the best possible type of construction. When he had finished his building, he asked the underwriters whether they regarded it as fireproof. They told him it was.

"All right, then," he replied, "I guess I'll carry my own insurance."

This was rather "putting one over" on the insurance men, and if it weren't for the danger of exposing large values in stock to the fire hazard, such a course would probably be commendable. As it is, the average business man, even though his building is fireproof, usually finds it worth while to carry some insurance.

KEEP UP WITH THE PROCESSION

There is such a thing as being too deeply immersed in one's own business. For instance, it is possible to be so interested in manufacturing lumber as to overlook general developments which relate to the lumber business just as much as to any other, and are of importance to all.

A lumber organization in a middle western city recently decided to have a number of outside speakers for the purpose of discussing matters of current interest in that community. The speakers were experts on their subjects, and opened the eyes of the lumbermen to matters which, as they soon realized, were of vital importance to the trade. For instance, until they had been addressed, the hardwood men did not know that they would probably be operating under a workmen's compensation law in the near future, not having kept up with developments along this line; and various other legislative matters affecting them and other employers were discussed, giving them their first inkling as to the facts in this connection.

A good lumberman is a good business man generally; and every

good business man is on the lookout for changes in the general commercial situation which will affect him in any way. In addition to taking an active part in associations in his own trade, it is well worth his while to belong to organizations of a general nature, which have for their work keeping him advised of what is going on in the field at large.

HARDWOODS IN THE ENGRAVING FIELD

Manufacturers of photo-engravings have called attention lately to the fact that the use of sectional steel blocks as bases for plates is becoming more popular in the printing business. This is a matter of some general interest, because at present the engraver supplies a wooden block which goes into the form and supports the engraving during the printing process. This is a rather important consuming factor, also, for in view of the large increase in advertising and publishing operations, the use of engravings has likewise been placed on a broader basis. The engravers say that wood is not altogether satisfactory, and that steel is answering the purpose better, the sections being made small enough to enable any size to be provided. The situation seems to suggest investigation by those interested in the continued use of wood, with the idea of finding out the engravers' troubles and enabling him to dispose of them. Cherry and birch have been used in this field for the most part.

ONE ADVANTAGE OF THIN STOCK

At least one advantage of making thin lumber is that it can be put into the dry kiln as soon as cut, and shipped out promptly after being dried. In other words, the time required for seasoning on the yard is eliminated, and the turn-over of the capital invested can be accomplished in a much shorter time. Of course, trade conditions do not always permit the constant movement of stock from the mill to the kiln to the car, but when this is the case the rapid progress of the stock is in sharp contrast with the long tie-up of green stock of thicker dimensions on the lumber yard. In the same connection it is also to be noted that the concern which devotes itself to making thin lumber usually manages to build up a reputation in this respect, so that when consumers think of thin lumber they are likely to think at the same time of the concern which devotes most of its attention to this business.

GETTING THE FALL LIST

One leading manufacturer of dimension stock has decided to accept business only when the consumer is willing to give the manufacturer his entire list of cuttings. In other words, this concern figures that it can cut up the lumber to advantage only when it has the entire list to work on, and that to try to get out one or two sizes only, relying on orders from other sources to take care of the waste, is poor policy. It seems, from the experience of this company, that the business will gradually work itself out in this way. Consumers who decide that the dimension idea is a good one should be willing to turn all of their cutting operations over to the mill, instead of using the plan only on sizes which are most difficult to get out.

Under the New Tariff

The tariff subject was worn threadbare a good many years ago. Tariff talks are nearly always dreary, and digging for facts among tariff figures is generally dry work. Still every business man in the country should find something of particular interest in the first month's business under the new tariff law which constitutes the first radical revision that we have had for some time. The figures for the first month's imports and exports since the inauguration of the new tariff have recently been supplied by the division of statistics of the Bureau of Foreign and Domestic Commerce.

Some have talked of jokers here and jokers there in the tariff bill, but the biggest joke of all has happened in connection with the first month's business; or rather, the biggest joke of all is in the fact that nothing happened. The figures show that notwithstanding the talks of flooding this country with foreign goods, and the stories by newspapers of every inch of bonded warehouse space being taken to store goods awaiting the new tariff, and the reports from various points of entry of extra help being put on to handle the rush, October, 1913—the first month under the new tariff—came near to being the smallest October for imports in three years.

The exact figures for October show a total of imports amounting to \$132,893,960. For October, 1912, the imports were \$177,987,986. For October, 1911, the imports were \$132,605,751.

If we hadn't had a new tariff law passed and if so many people hadn't said so many things about it and made so many predictions about what would happen, these figures would just be mere dry facts, and the total imports for the month of October would hardly receive a second glance. It would be regarded as just a normal month's business with perhaps a little tendency to sluggishness. But when we consider the things that were said and done by various industrial interests, "it is to laugh." The lumber fraternity made its plea against free lumber, and made it strongly; the beet sugar people maintained a press bureau at Washington with which they put up all manner of pleas for their industry, and predictions as to disaster that would follow free sugar. The wool people wooled around considerably, and on all sides and from every direction came protest enough to make one think that letting down the tariff wall would immediately bring such a flood of imports that disaster would follow.

There were millions of dollars worth of goods brought in, of course—that is usually the case, as our import trade runs into the

millions every month, but there were not any more millions than usual, and as compared to the activities in the export trade or import trade, was remarkably light. Moreover, while there may have been millions of dollars worth of goods piled up in bonded warehouses, there was probably nothing unusual in all this. A little parenthetical note accompanying the statistics says that the statistics for October, 1913, include entries under the tariff law of 1913 beginning with the fourth day of the month. The entries of the first three days of the month under the law of 1909, amounting to approximately \$13,665,000, are included with September totals. This raises the question if people stopped bringing in goods under the old tariff and were piling up, there should not have been any appreciable amount of entries during these first three days. Yet the figures show that the entries went on just about as usual.

If those who are given to waxing warm over tariff matters and their effect on the business world will just take these statistics and paste them in their hats where they can glance at them any time they feel impelled to discourse on tariff and its influence on trade, it should prove an effectual stop to spellbinding oratory on the tariff in the future. These figures prove quite conclusively that while the tariff may be a factor in business, there are many other factors that have grown bigger, and the tariff itself has become so insignificant in its influence that the new law doesn't make even a ripple in the flow off trade.

The thing about this report of international trade under the first month of the new tariff that deserves serious consideration is our exports fade. Our exports for October, 1913, amounted to a total of \$271,558,726, which was not only the biggest October business in three years but, as may readily be seen, it amounted to more than twice the total of our imports for the same period. It is, therefore, our export trade, especially the export trade in manufactured articles, that is the big factor in our industrial life. What we need is to foster and continue the development of this export trade for we have become a manufacturing nation requiring a world's market. Our exports of manufactured goods have long since passed the exports in foodstuffs in total value, and with the steady enlargement of equipment and the increasing number of industries the great thing to make the country prosperous in all its industrial branches is a wide market and a bigger export trade.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARD-WOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 621-Kicking About Grading Rules

The following correspondence is self-explanatory and is published without comment. Epiron.

Charge Nev 29 Editor Hydowood Ricogay Last summer there was a good deal of protest made against the then proposed change of grading tunes by the National Hardwood Lumber Association. To such an extent was this, that it was my understanding that the proposition was dropped

I am just in receipt of a letter from one of our furniture manufacturers as follows

as follows:

The National Hardwood Lumber Association has just recently put out a new rule of inspection which it is trying to put into effect. It was issued September 15 of this year. This reduces the grade of lumber about the second of th

The following reply has been written the above party:

Chicago, Dec. 1 .- I have your favor November 29. I think your correspondent's protest about the change in the rules of the National Hardwood Lumber Association to be not only ill-advised, but the statements are not borne out by the facts. The slight change in rules made at the last annual meeting of that association did not reduce the value of grades by two dollars a thousand by any manner of means. As a matter of fact, the changes were very slight and not of a character to reduce the value of grades to any appreciable extent.

The suggestion presented by your correspondent that buyers insist on purchasing stock on the basis of old rules would not be possible of accomplishment if the buyer desires to avail himself of the guaranteed, official inspection of the association, because the association would not permit its inspectors to pass on grades of lumber inspected on any other than its present system of rules.

Today the buyers have all the best of the lumber producers in the matter of national inspection, and if they are wise they will let a good thing alone .- EDITOR.

B 625-Seeks Oak Boards and Gray Elm

Liverpool, Eng., Nov. 29 .- Editor Hardwood Record: We have an inquiry for the following stock, and shall be glad to have quotations on same in carload lots:

1"x12" and wider prime coffin oak boards 34"x12" and wider prime coffin oak boards

1"x12" and up prime states Orhamwood (gray elm).

in 14' and 16' lengths, to include 25% 17" and wider, c. i, f. Manchester, stating date of shipments. Would also be pleased to receive quotations on prime Orhamwood boards 1", 1¼", 1½", 2", 2½", 3" and 4" thick, usual spacifications, for prompt shipment c. i. f. Liverpool,

Anyone desiring to communicate with this correspondent, may have the address on application .- EDITOR.

B 626-Broom Handle Stock for Tent Poles

Aurora, Ind., Dec. 8 .- Editor HARDWOOD RECORD: Can you give us information about parties getting out turned broom handle stock, which would be suitable for government tent poles which are about the size of an ordinary broom handle? These pieces we desire in maple sawed out to about 1" square or nearly so, and a little over 3' long, or the same turned. We will be under obligations to you if you can give us this information.

The above inquirer has been supplied with the names and addresses of a few manufacturers of the stock sought. Any producer of the material referred to desiring to get in touch with this prospective customer, can have the address upon application .- Editor.

B 627-Rotary Cut Oak Panels Wanted

Ofsego, Mich., Drc. 11. Editor HARDWOOD RECORD: We are in need for immediate delivery of quite a quantity of rotary cut oak panels in 3.716 and $^{-1}i''$ thickness, the longest length 1' 94i'' and the shortest 73s". These vary in widths from 4" up to 12".

This inquirer is a leading manufacturer of office furniture, and envone interested in the inquiry, will be supplied the address on

B 628-Wants Connection for High-Grade Hickory Logs

Kinghorn, Fite, Scotland, Dec. 10. Editor Hardwood Record: We are exceptionally large users of hickory logs of the best quality for golf handles, but have not found the supplies available on this side of the ocean, i. e., at Glasgow, of sufficient quantity or quality for our trade. It has occurred to us that it would be an advantage were we to travel to the hickory centers which we understand are the states of Kentucky, Mississippi and Arkansas, and there choose the logs for ourselves and so brand them. We are wondering whether this would prove a practicable proposition. Perhaps, therefore, you will be so good as to supply us with the names of several large lumbermen in the best hickory producing locations, dealing largely in hickory logs, and what should probably be the price per cubic foot in the log, and how much for freight to the port

B 629-Wants Rating Book for Handlers of Wood

Wausau, Wis., Dec. 20. - Editor HARDWOOD RECORD: Kindly advise me if there is a book of ratings published giving the ratings of concerns which deal in wood only.

This concern has been advised that as far as HARDWOOD RECORD knows there is no such publication, but if any readers have the information that this correspondent desires, it would be considered a distinct favor to write this office .- EDITOR.

B 630-Wants Oak or Hickory Chair Splits

Philadelphia, Pa., Dec. 17 .- Editor Hardwood Record: We have an inquiry for white oak or hickory chair splits 5% or 34" wide, 15' long, strand split for weaving seats in chairs, also called imported splits. If you know of anyone who manufactures, or can furnish these splits, we will be glad to communicate with them,

This concern has been given a list of firms who may be able to get out this stock, but others interested may have the address by writing Hardwood Record,-Editor.

B 631-Wants Thick Quartered White Oak

Chicago, Dec. 17. Editor HARDWOOD RECORD: We have an inquiry for some quarter-sawed white oak lumber 314" thick to be used for casks. If you know of anyone who can supply this, kindly refer them to us,

This concern has been advised that the item it seeks is extremely difficult to secure. HARDWOOD RECORD will appreciate suggestions from any concerns in a position to handle such an order.-Editor.

Clubs and Associations

New York Association to Hold Annual Banquet

The annual dinner of the New York Lumber Trade Association will be held February 19 at the new Biltmore hotel in the vicinity of the Grand Central Terminal. The hotel is the newest in New York and will open soon after January 1. The lumbermen will be among the first to meet in the banquet hall which is said to be the finest ever designed. The entertainment programme is in the hands of C. E. Kennedy, the popular wholesaler who has made a record as an amateur entertainer and knows all the headliners in the profession. B. L. Tim, of the Hirsch Lumber Company, another new man on the dinner committee, will have the selection of the menu. This is enough to assure the best in the land, for Mr. Tim is an epicure. Every effort will be made to make the attendance at this dinner the largest in history.

Sawdust Club Dines at Philadelphia

The Sawdust Club, which is composed of lumbermen who are members of the Union League, gave its regular annual banquet in the banquet room of the league on December 10. The room was ingeniously decorated to resemble a forest scene; the table with an elaborate fountain in full play as a center piece was banked with flowers, ferns and palms. and the immense chandelier was literally covered with orchids and other rare flora. The affair was as usual of a recherché character, and as usual was well attended. The menu cards of a studied artistic design furnished the souvenirs of the evening. John T. Riley of Charles S. Riley & Co. was toastmaster, and speeches were made by Dr. Martin G. Brumbaugh, John Gribbel, Hon. Charles R. Miller, governor of Delaware; William T. Tilden, president Union League; but Thomas L. Dailey, the prominent lawyer, was the chosen orator of the evening. The music consisted of a fine orchestra and solos by Harry Saylor, a popular baritone and member of the Kindling Wood Quintette, and Miss Mary G. Emmert, soprano. Among the other guests present were Byron Brill, Stewart W. Buck, L. G. Buckwalter, Frank L. Carre, James Sherlock Davis of New York, Hon. John W. Davis, Eli B. Hallowell of Hallowell & Souder, Robert L. Hilles, Frederick T. Jones, G. H. Kocherspeiger,

George V. Massey, E. F. Leaty National Wholesale Lumb r Dealers' Association, James '' Mitene', Mahlen L. Savage, George M. Smith, Harry Walters, and Rob it W. Welsh. The occasion proved a jolly one, and a liberal flow of wit and reparté kept the guests in roars of laughter throughout the evening. The committee to whom the success of the entertainment is due is composed of W. H. Smedley of the Smedjey Brothers Company Fronk Buck of estate of Daniel Buck, and Rulph Souder of Hallowel, & Some

News of the Manufacturers' Association

Secretary W. H. Weller et il. Hardwood Manufacturers' Association of the United States recently returned to Cincinnati from a trip to Memphis and Little Rock, where he went to make the preliminary arrangements for the forthcoming twelfth annual meeting of the association, which is to be held at the Gayoso hotel, Memphis, Jan. 21 and 22.

Mr. Weller makes the statement that judging from the evidence he saw, the coming convention will be one of the biggest and most successful ever

held by the association.

While in Memphis, Secretary Weller had a conference with R. M. Carrier, Sardis, Miss.; J. F. McIntyre, Pine Bluff, Ark.; M. B. Cooper. Memphis, Tenn., and Ralph May of Memphis, in which plans for the meeting were discussed and definitely outlined. Mr. May assured Mr. Weller that the Memphis lumbermen appreciated the fact that their town has been selected for the convention, and are eager to do everything they can to make the stay of the visitors at Memphis a memorable one.

A committee is now at work on the entertainment, which will probably be held on the evening of January 21.

Hardwood Inspections in November

The official bulletin of The National Hardwood Lumber Association for December gives the total inspections for the preceding month at 13,698,-Of this amount 7,972,484 feet were credited to salaried inspectors, and 5,725,832 to fee inspectors. John M. Pritchard tendered his resignation as chairman of the inspection rules committee, and it was accepted. He has accepted the position of secretary of the Gum Lumber Manufacturers' Association. A meeting of the board of managers has been called for January 13, 1914.

Annual Arkansas Club

The first annual convention of the Arkansas Lumbermen's Club was held in the travelers' rest room of the Marion hotel. Little Rock on December 13. At this meeting officers of the association for the ensuing year were elected as follows: C. A. Buschner, Freeman Smith Lumber Company, Millville, Ark., president; George W. Allport, Varner Land & Lumber Company, Geridge, first vice-president; A. W. Judd, Gates Lumber Company, Wilmar, second vice-president; W. J. Grossman, Forrest City Manufacturing Company, Forrest City, secretary-treasurer; O. O. Axley, Southern Lumber Company, Warren; Edwin Bower, Eagle Lumber Company, Eagle Mills; L. A. Baudine, Wisconsin Lumber Company, Huttig. trustees for the two year term.

All of these men, except Secretary Grossman, who was re-elected, having served in the capacity of secretary-treasurer for the club since it organized, are yellow pine men. The selection of all yellow pine officers in the association was done at the suggestion of the retiring president, J. F. McIntyre of J. F. McIntyre & Sons, hardwood manufacturers with mills at Pine Bluff. An effort was made to re-elect Mr. McIntyre to the presidency of the Club for another year, but he stated very positively that in his opinion, for the welfare of the organization, the officers should alternate from year to year between the hardwood and the yellow pine men

The annual banquet was served in the evening to a large number of members and visiting ladies and gentlemen. At the dinner Mr. Buschner, the newly elected president, presided, and as toastmaster called upon a number of men for short talks. The occasion was a very enjoyable one.

Annual Dinner St. Louis Lumbermen's Exchange

The Lumbermen's Exchange annual dinner held Tuesday evening December 16, at Faust's Restaurant, was one of the most enjoyable held for several years. In addition to the local members present, several out-oftown members were present. During the dinner there was a cabaret performance.

After the dinner was finished, there was a brief business session held. President F. H. Smith, presided, and after a few preliminary remarks, he introduced E. A. Buschner, president of the Arkansas Lumbermen's Club, who urged the lumbermen to unite in opposition to certain measures adopted in southern lumber camps in regard to labor, by the Industrial Workers of the World.

Following the talk, Secretary McBlair read his annual report, in which the year's work is reviewed. The total inspections of the year exceeded 6,000,000; a net increase of thirty firms in the membership was attained. and a deficit at the beginning of the year of \$200 was wiped out and a substantial balance on the other side of the ledger was secured. A new feature of the work for the year was the inauguration of a yellow pine inspection service; not only in St. Louis but in the yellow pine centers. The hardwood yards in St. Louis got together in a co-operative movement and issued two publications monthly. The St. Louis Buyer is sent to 2,000 lumber manufacturers in the producing states and 5,000 copies of the St. Louis Salesman are mailed to planing mills, furniture factories. carriage and wagon factories, car builders, and other probable purchasers in the consuming territory.

The report of the Traffic Committee of the exchange, of which Charles E. Thomas was chairman, was then submitted and was unanimously accepted. It stated that the Traffic Committee is opposing the proposed The committee does not believe that the lumber pusiness, as a whole, can stand any advances in freight rates on its product at the present conduct the railreads of the country if they are conducted along economcents of a car of lumber is compared to a carload of cotton or sugar, or higher in proportion than they are on some other commodities that are often given preference in handling by the railreads, especially at certain times of the year. Another thing to be considered is that the lumber shipped in cars does not burn up, nor is it so apt to be damaged in transit as some other freights that take comparatively lower rates, all things being considered, than lumber is compelled to pay,

The report continued by saying that the time may come when railroads will be able to show that they are entitled to an advance in freight rates so as to increase their general revenue, but this does not necessarily mean that all rates should be advanced uniformly five per cent, simply because the railroads need the money. It would be a great mistake to make one industry pay an advance, if that industry is already paying a much greater rate on its freight in proportion to other lines of business, and if that industry is struggling along and is compelled to meet competition with substitutes, as the lumber business is at the present time. Steel and concrete and fibre have and will continue to take the place of lumber to a greater and greater extent, and the lumber industry requires rates so as to encouragy rather than discourage the use of lumber. Doubtless there are numerous cases where the railroads are entitled to a raise in rates so as to increase their revenue but the raises should not be made on freight that is already paying more than its proportion.

The committee further reported that it has succeeded in having the advance rates to St. Louis from the southwestern territory suspended from time to time, and they are now suspended until July 1, 1914. These rates, which carry on an average of from three to four cents advance per bundred nounds to St. Louis on hardwood lumber, would have taken effect December 1, 1912, if it had not been for the work of the Lumbermen's Exchange. The committee succeeded in raising considerable funds to fight these proposed advance rates, which it now has in the hands of

Joseph A. Hafner as trustee for the funds.

Henry A. Boeckeler, chairman of the Missouri rate committee followed with his report, which was accepted. The report is as follows:

with his report, which was accepted. The report is as follows:

This committee of the exchange was appointed by President Smith after a general meeting held in Neptember. Its work has been to investigate thorough the operations of the intrestate rates as a few by Mattute of the control of the president of the p

Taussig and the Gideon-Anderson Lumber Company. Nothing has been done, however, to date by the commission.

The final action Judge McPherson made necessary by the July decision of the Supreme Court of the United States has been promised a number of times. It was last promised for December 5 and according to advices received from the Public Service Commission is again promised for the 15th. This decision has not yet been handed down and until it is nothing can be done in the direction of proceeding in the collection of these rates. of the second times. It me received from the Procession the in the d Thos. E. Powe, chairman of the Public Affairs Committee, offered a

resolution urging immediate passage of the currency bill at Washington. After considerable discussion it was passed.

The reports of the two nominating committees for officers during the ensuing year were then received. The committee appointed from the floor, composed of J. L. Benas, chairman, and Geo. Cottrell and Thos. E. Powe. submitted the following slate:

PRESIDENT—H. A. Boeckeler.
VICE-PRESIDENT F. H. Smith.
DIRECTORS—E. H. Luchrmann, Thos. E. Youngblood, T. J. Noser, F. E.
Sheldon, W. W. Milne, Chas. E. Thomas, G. E. Hibbard.
ARBITRATION—F. J. Liebke, L. Krug, J. A. Hemphill, Robt, Abeles, Jr., David O'Neall.

The committee appointed by the chair, and composed of R. F. Krebs, chairman, Thos. J. Noser and A. R. Kingsverry, named the following as their selection :

THEIR SEICCLION:

PRESIDENT—F. H. Smith.
VICE-PRESIDENT—H. A. Boeckeler.
DHERCTORS—W. R. Anderson, L. E. Cornelius, E. H. Luehrmann, W. W.
Mine, Thos. E. Powe, F. E. Sheldon, Franz Waldstein.
ARBITRATION—J. L. Benas, E. W. Blumer, L. M. Borgess, C. A. Bowman,
R. V. Fletcher.

The election will be held at the rooms of the Exchange on January 2. Following the nominations, the meeting adjourned.

Cincinnati Trade to Entertain

There is a combined effort on the part of all hardwood lumbermen of Cincinnati to see that the visiting delegates to the convention of the Ohio Retail Lumber Dealers' Association to be held here at the new Hotel c. It is a representation of the real of and property enter-tion of the artiflets, were cose to one thousand visitors and a splendid meeting is anticipated. Details of the entertainments and the task of the get been arranged and die

There is a feeling of optimism among the hardwood dealers, the present duffness not having any effect or reflecting a continued dufiness. After one, a fair but not rushing businebeing low in the consumers' yards, and manufacturers of lumber with fair stocks now on hand are running mills right along sharing in the

Meeting of Philadelphia Wholesalers

The Phradeaphna Whores, is Lianger Dealers' Association, inaugurated another social feature by inviting the retail lumber dealers and planing mill firms in Philadelphia and vicinity to a dinner given at "Kuglers," on December 17. It was strongly emphasized that the dinner was not given with the object of embarrassing the retailer, or in any way make him feel obligated to buy from members of this association, but for the purpose of bringing the wholesalers, the retailers and the planing mill men together for mutual good, and ultimately for the welfare of the city. The guests were given to understand that if the Philadelphia wholesalers do not sell as cheaply or furnish as good material as could be found elsewhere, they were justified in buying elsewhere. One hundred and twenty-two diners sat down to a banquet which could have made suggestions to the famed "Lucullus," At each plate was a pamphlet giving a concise history of the wholesale association, its direct purpose, and for general edification was divided into short paragraphs.

divided into short paragraphs.

"The members of the association know very well that they must be econome and necessary agents in the distribution of lumber.

"They can surely maintain this supremacy in the patronage of their frends, the real declars through the advantage of their convenient location, their organization and system; their established character, their knowledge of sources of supply, the consumption of the same, and thir loyally to established trade ethics.

"Buyers of lumber may absolutely rely upon the moral endorsement and support of the association in any contract one of their members may make."

It then gave the list of the members of the association,

The banquet room was handsomely decorated with the national and state colors. The music was consigned to the efficient Jerry Shaw and his erchestra. After eigars were passed around, President Owen M. Bruner addressed the guests, telling of the advantages which the association offers and of the efficient work of its committees.

The further conduct of the meeting was in charge of Robert G. Kay, chairman of the committee on the dinner to the retailers. Mr. Kay opened his speech by saying that this meeting had made him ten years younger. He had met at the meeting old men and some younger men he had not seen for years. "This is a get-together meeting," he said, "to benefit them all, and for the city of Philadelphia's welfare as well. We want to do each other all the good we can, to work together to get the great 1,700 foot dry dock brought to League Island, and also in behalf of other great improvements now in prospect." Mr. Kay then introduced Frederick S. Underhill of Wistar, Underhill & Nixon, who said in part:

"Since you have received the invitation to come you have probably several times raised the question as to why you were invited here and what motives were behind the invitation. We want to assure you that our motives are not altogether selfish, although we are frank to state that we have a sincere conviction that benefits will come ultimately.

"The first essential point that we desire to emphasize is that where there is such a strong representative community of retail merchants and in the same community such a body of responsible, aggressive, wide awake wholesale merchants it is self-evident that a substantially good and real individual advantage to all concerned is sure to result from a spirit of mutual interest and co-operation.

"The second point is that every person here, because of his present identification with the lumber trade, is interested in maintaining a permanent market for lumber. Regarding every item of lumber that you handle the manufacturers of cement and other substitute materials have been pouring into the ears of the architect underwriters, real estate men and carpenters many points that are apparently convincing and the result is that quite a number of these people already are altogether against lumber or are prejudiced in favor of the substitute to the detriment of lumber. If they are allowed to continue their missionary work without any systematic, practical, coherent work on the part of those who depend upon the lumber trade for a livelihood the result is surely a menace to your interests and ours. We want you to know that we propose to counteract this substitute propaganda.

"The third point and last that we will emphasize at this time is that the members of this association have recognized the ethics of trade and in seeking a market for their wares have fairly considered your welfare."

Mr. Kay then introduced Benjamin Stoker, of George W. Stoker & Son president of the Lumbermen's Exchange, as a retailer who buys ninety per cent of his lumber in Philadelphia. Mr. Stoker said in part:

"In the city of Philadelphia today we are represented by from sixty to sixty-five retail yards. We employ from 1,500 to 2,000 people. We have an investment of about \$10,000,000 in lumber of all kinds. We carry about 100,000,000 feet of lumber ready for immediate delivery. We are as necessary as the baker, the grocer or any other retail business. If we should all conclude to close our gates for thirty days the business of our

city to a large extent, would be paralyzed, and so I have concluded that we are somebody and our business is worth while, and yet, from a retail point of view, present conditions seem to have us all aguessing and some

"Philadelphia has ceased to be a quaker village, has become a great metropolis, the lest and truest American city of them all and known throughout the world as the city of homes and brotherly love, and we as lumbermen both wholesalers and retailers, have had our share in the malaine of it."

Herbert P. Robinson, of Miller-Robinson Company, was next called upon by Mr. Kay. Mr. Robinson said he in the past had depended on the wholesaler to a great extent and had been much benefitted by the knowledge obtained. He said he could not please all of the local men because they come too fast. For complaint of wholesaler as to not getting enough trade from the retailer Mr. Robinson gives for a reason that the lumber merchant rarely calls on a customer. "We want to see the boss once in a while," he said. "The local firms should trade with one another," was his opinion. "Although there were rarely any trouble or kicks coming, it would be a better arrangement, for it is easier to make proper adjustments and to settle with local men than with mills."

Mr. Kay wound up the evening with the oft repeated epigram "Live and let live," adding "Let us help the men who help you." ated the explanation that the evening's affairs were for the exclusive purpose of getting all the lumbermen in close touch for mutual as well as the

St. Louis Club Appoints Committees for 1914

J. A. Reheis, the newly elected president of the St. Louis Lumbermen's Club, has selected the following committees to serve during the ensuing year: It is the purpose of the new administration to push the affairs of the club along business lines to the fullest extent.

BY CHO ARONG DUSINESS IMES TO THE THIRST EXCENT.

ENTERFANNENT COMMITTEE—R. J. Fine, chairman; W. W. Tilden, W. V. Stephenson, Guy B. Fulton, Chas, Antrim.

TRAIFFIC COMMITTEE T. C. Whitmarsh, chairman; E. E. Eversull, S. H. ulletton, J. W. Putnom, F. E. Sheldon, Mirmbuskint Committee—F. J. Riedling, chairman; Otto Pfeffer, W. W. ings, B. B. Kennedy, J. E. Mink, Arbitration Committee—Hans Wachsmuth, chairman; Chas. C. Curry, F. Pendergrass, Carl Holekamp, R. T. Wintermann.

Statisticiax—W. F. Biodermann. ARBITRATION

National Wholesalers to Meet at Buffalo

The Board of Trustees of the National Wholesale Lumber Dealers' Association met in New York, December 18, and decided on the date and place for holding the next annual convention. The big meeting will be held March 4 and 5 at Buffalo, N. Y., hotel or meeting place to be chosen later. The association had invitations from many other cities, among others Memphis, Philadelphia, Boston, Nashville, New Orleans and Colorado Springs. Buffalo was chosen at this time because of its convenience of location for members in the States and Canada, and furthermore it is many years since this association met in Buffalo. As usual the meeting arrangements and entertainment features will be under the direction of the executive committee, the association acting as host at the dinner.

Forest Products Exposition Bulletin

Definite shape is taking the place of the preliminary generalities of the Forest Products Exposition and within a short time there will be descriptions of proposed exhibits, the working plans of some of the associations, companies and individuals, and the general program of the great undertaking for the exploitation of American wood. In order to insure the proper amount of demonstrating material showing the operative working of the Forestry Service, a bill has been prepared for Congress to appropriate the sum of \$10,000 for the preparation and maintenance of an exhibit of the forestry division of the United States Department of Agriculture at Chicago and New York. The management of the exposition is in communication with public authorities and private concerns in the Philippines and Panama, while a number of Canadian interests are studying plans for active participation.

An effective argument in exploiting the Forest Products Exposition is the personal discussion of the purpose, plans and progress as presented by Manager George S. Wood or his representative at the various trade conventions and meetings. During January and February Mr. Wood will visit the principal meetings of the country in the various branches of the industry, covering practically every point of the compass from Chicago and making his home in a Pullman car. The active participation of clubs and organizations, as well as the individual concerns, is being developed along lines that promise successful results.

Many applications for space have been received at the headquarters in Chicago, representing the general interest throughout the trade that is being taken in this shop window of the industry. One of the difficulties anticipated by the management at the outset was that of reaching the people and interests whose participation would be essential to making up a complete story of American wood, but the co-operation of associations and concerns throughout the country has spread the news until nearly every angle of the trade seems to have been reached, according to advice received by the management. A number of the leading organizations do not hold their meetings until January and February and while assuring

cooperation and representation, they have been unable to take official cognizance and prepare physical plans. Manager Wood is urging upon all prospective exhibitors the value of preparing their exhibits in portable form as far as possible, not only for shipment from the original point to Chicago, but for facilitation of another rapid movement from Chicago to New York

The management expects to make arrangements for one and possibly two sections of special freight train running on passenger schedule from Chicago to New York, although the details of transportation arrange ments must be assumed by the exhibitor.

It is reported that no industrial exposition in years has stirred the interest in the East as the Porest Products Exposition, which is significant to the industry of a stimulated action in the right direction, especially in view of the readjustment of trade standards and conditions with the opening of the Panama canal

Southern Hardwood Traffic Bureau Increases Quarters

On December 16 the governing board of the Southern Hardwood Traffic Bureau of Memphis decided to increase the working quarters to more adequately accommodate the constantly growing duties of that bureau, A committee was appointed to decide upon enlarging the quarters, this committee being composed of James E. Stark, Walter Darnell and C. D. Hendrickson

The annual election of the bureau will be held on January 6 and the president, vice-president and five directors will be chosen.

Memphis Club Election

The annual election of the officers of the Memphis Lumbermen's Club, held Saturday, December 13, resulted in the choice of J. D. Allen, Jr., for president; Ralph May for vice-president; C. D. Cadell, secretary; T. E. Jones, O. M. Krebs and J. F. McSweyn, directors. The campaign for election has been energetically carried on and the resulting vote showed the keen competition between the blue and red tickets. In the presidential election Mr. Allen on the blue ticket won out over S. M. Nickey, his opponent on the red ticket, by only five votes. Inasmuch as the red ticket secured only two of the election, the result was a decided victory for those sponsoring the candidacy of the blue ticket. Practically the entire membership of 150 was in attendance and voted.

According to the usual custom, each of the newly elected officers and directors made a speech following the announcements of the balloting in each case. The next regular meeting of the club will take place January 10, when the newly elected officers will be installed.

F. E. Stonebraker was in charge of elections and was assisted by D. C. Major and C. D. Hendrickson, who acted as judges. John W. McClure and G. C. Ehemann were clerks.

Following the election the members were served with a buffet luncheon and then followed the business session, during which a resolution was passed extending to Senators Shield and Lea and Congressman McKellar of Tennessee a vote of thanks for their efforts to secure for Memphis one of the regional reserve banks which will be started under the new currency measure.

With the Trade

Dailey and Allen Lumber Company Starts Business at Pittsburgh

A new hardwood concern in Pittsburgh is the Dailey & Allen Lumber Company at 920 Farmers' Bank building. Fred C. Dailey, senior member of the company, was for several years an all around lumberman in Pittsburgh, before going to the Willson Brothers Lumber Company, where he has been fourteen years and where he was a director the past few years. He is one of the best known salesmen in Pennsylvania.

Robert Allen started as an office boy with Willson Brothers, and for the last two years bas been secretary of that company and also manager of its traffic and hardwood department. He had quite an extended experience also as a salesman in the eastern market. The concern expects to make a specialty of hardwood and is arranging to have one of the best cypress agencies in this part of the country. It will also handle oak flooring in particular, as that stock is much used but often very hard to get in this district.

Boston Firm Prepares for Opening of Canal

Lawrence & Wiggin, hardwood dealers, Boston, have been very busy of late making preparations to handie large quantities of Pacific coast lumber upon the opening of the Panama Canal. They have purchased a large tract of land in Charlestown on the water front adjoining to \$2,500,000 warehouse property in which this concern is interested. The additional property will be used in part as a lumber yard. The new purchase gives the company about tweive acres. The property contains two and one-half miles of railroad tracks, and the wharf has five large berths for vessels. The unloading of the lumber from the steamer will be done by cranes, and the company states it will be able in this way to unload 1,000,000 feet a day.

Lawrence & Wiggin are planning the largest wholesale lumber yard in the East. It is said they will carry a stock of fully 15,000,000 feet at all times. They are interested in the recently organized steamship company to be known as the Boston-Pacific Steamship Company. Mr. Wiggin states that this company has twelve steamers that it can use in this Boston and will go back loaded with a general cargo. The company will the railroads for shipment west or south.

George G. Roberts Company to Open New Mill

The George G. Reberts Company of Gerrens, Miss., a point about twenty-five miles south of Memphis on the Yazoo & Mississippi Valley railroad, announces that it has in course of construction a band mill that will be ready for operation about the first of February.

The plant will be equipped with a Smith, Meyer & Schnier 8-foot mill with a capacity of 35,000 feet a day. In addition to this the company is now operating a circular mill at the same point and turns out about 25,000 feet of lumber per day. This company owns about 40,000,000 feet of oak and gum stumpage within a reasonable distance of its mill operation.

Chicago Veneer Company Moves General Offices

The Chicago Veneer Company of Burnside, Ky., announces that it has just moved its general offices from Burnside to Danville, Ky. This move was made necessary on account of increasing business, and it is boned it will result in obtaining greater efficiency in looking after the wants of the trade, and in facilitating the handling of the business,

The company's force is very pleasantly located in new offices, which are thoroughly equipped with up-to-date equipment and modern office appliances. The plant at Burnside is in full operation, and the change in offices will not cause any interruption whatever,

To Reorganize Furniture Factory

It is reported from Brenham, Tex., that there is a movement on foot to re-open the Brenham furniture factory which has been idle for the past few years. The plan is to reorganize a new company, raise the capital stock, and install new and improved machinery for the purpose of manufacturing furniture from local woods. An option has been secured on the

Another Hines Purchase Reported

It is rumored that the Edward Hines Lumber Company of Chicago is figuring on buying the plant of the John H. Kaiser Lumber Company at Eau Claire, Wis., and its holdings in Sawyer county, Wisconsin. Mr. Hines recently visited the Eau Claire plant to inspect it. While the report is merely a rumor, it is given credence and it is stated that if the deal goes through it will involve the exchange of \$1,500,000, including the plant and timberlands.

Wood-Mosaic Company Building Excellent Plant

In this connection is shown a cut of the new mill of the Wood-Mosaic Company, which is being erected at New Albany, Ind. The former mill was burned out on the first of August, 1913, and the plant is designed along entirely different lines. The structure will be of brick, steel and concrete throughout, and the flooring will be a form of non-absorbent paying. The mill will have a capacity of 25,000 feet of lumber; 45,000 feet of flooring and 30,000 feet of veneer. The dry kiln will have a capacity of 1,250,000 feet a month. It is expected that the mill will be completed about the first of February, 1914.

The other mill of the company at Highland Park, Ky., will be built for manufacturing rumber only, and is also of concrete and steel construction. The cost, including the double band mill and the battery of dry kilns, will be \$60,000.

The New Albany plant will cost, including the modern electric power plant, \$150,000. It is expected to have this plant a model in every way.

The company has thirteen acres of ground and is going to plant grass and shrubs around the office building, the drives, etc. This modern plan will be carried out generally.

NEW PLANT OF THE WOOD-MOSAIC COMPANY, NEW ALBANY, IND., IN COURSE OF CONSTRUCTION

Cyrus C. Shafer to Incorporate

a construction of the cons

The capital stock will be \$500,000, paid up, and it only interest of politics in the origin ization uside from Mr. Shafer will be his essistants in it who have been with him from three to fifteen years.

The business of Cyrus C. Shafer offers a striking illustration of the successful results to be attained through specializing. His business has practically doubled each year. He started in 1890 at Milford, Ind., with a capital stock of \$1,500, and twenty acres of timber. He owned there a sawmill with a capacity of 2,000 feet per day. Since that time, as stated, his business has been increasing remarkably every year, and the annual sales now aggregate about \$1,000,000

The scope of the company has increased to the extent that it has a number of receiving and distributing yards at different points in the country, chief among which are the yards at Cairo, III., and Troy, Tenn. The Cairo yard is known as the main distributing yard. This yard has the advantage of being on three trunk lines and of having four-fifths of a mile of private siding. The capacity of this siding is 109 cars and it is not at all uncommon to have fifty and skty cars on the tracks at one time. This yard has a handling capacity of 200,000 feet daily, and maintains a corps of twelve or thirteen inspectors under normal conditions. It may be remembered that on April 28, 1913, the company loaded out from the Cairo yard forty-two cars of heavy oak in a single shipment on a special train, this stock being loaded on the two days of April 27 and 28.

The Cyrus C. Shafer Lumber Company will carry as heretofore an unusual assortment of stock, specializing in heavy oak and also handling considerable quantities of ash, hickory and poplar, although it can take care of orders for all other southern hardwoods.

Cyrus C. Shafer is president and general manager of the new company and John R. Shafer, his brother, secretary and treasurer.

Some Unusual Oak Veneer Logs

In this connection is shown a small part of the oak veneer logs on the yards of the Fred W. Black Lumber Company, Chicago, which for perfect symmetry, size and general soundness are altogether remarkable. This company has been doing a big business in sawed oak, and is bringing in some stock that is sure to give the firm a reputation for handling the right kind of veneers.

The logs in question average forty-one inches in diameter, while slxty-five per cent of them are thirty-two inches and up, and none are under twenty-eight inches.

This picture shows but a small portion of the log yard of the company, but is reproduced herewith because it gives an accurate idea of the remarkable roundness and the sound condition of the logs. At the left is

PART OF A SHIPMENT WHITE OAK VENEER LOGS ON THE YARD OF THE FRED W. BLACK LUMBER COMPANY, CHICAGO,

CYRUS C. SHAFER, SOUTH BEND, IND.

to be seen a small corner of a large pile of mahogany legs, which class of material this company is constantly receiving.

Death of Hoyt H. Green

Hoyt II. Green, seventy-seven years old, president of the American Hardwood Lumber Company, St. Louis, Mo., died last week in Cleveland, O., at the home of his daughter, beath was due to the infirmities of old age.

Mr. Green retired from active business about two years ago when his health began to fail, but still retained his interest in various enterprises, among them the lumber commany.

Mr. Green was born September 15, 1836, in Colerain, Mass. He was educated in the public schools. He entered his life's work, in the foundry of Geo, W. Sizer & Co., in Cleveland. Later he went to the Mowry Car Wheel Company in Cincinnati. He came to St. Louis in 1856. With his brother, D. P. Green, as a partner, he started the firm now known as the Green Car Wheel Company. The firm was known as D. P. Green & Co., until 1864, when it was incorporated under its present name.

Shortly after he came to St. Louis Mr. Green married Miss Julia Moore. Mrs. Green died twelve years ago.

Mr. Green was also president of the American Hardwood Lumber Company, and vicepresident of the Williams Patent Crusher and Pulverizing Company.

During the war he was a member of the Missouri Home Guard. He was a prominent Mason and a member of the Mercantile and Recreation clubs in this city.

New Chair Factory Opened at Chattanooga

W. S. Milne of Chattanooga recently formally opened his chair factory, the eeremony being witnessed by about one hundred invited guests. The factory is modernly equipped throughout and is furnished with complete electric drive.

W. D. Young & Co. to Increase Plant

It is reported from Bay City, Mich., that W. D. Young & Co. are to increase their capacity by the erection of a factory building for the purpose of manufacturing the finished product for the Aladdin houses of the North American Construction Company. The contract will necessitate a complete new equipment with special machinery for this particular work. The new plant will be located adjacent to the flooring factory and will be 115x400 feet, constructed on the unit plan with all modern appliances,

E. Sondheimer Company Pays in Full

It was reported that the E. Sondheimer Company of Memphis, Tenn., recently paid its creditors in full and that the business is returned to the stockholders. The amount paid during the last two years aggregates from \$700,000 to \$800,000 with interest at six per cent. This getting back to its former status by the Sondheimer company will undoubtedly be welcomed among the many friends of the principles of this concern.

Exceptional Yellow Pine for Veneering

In this connection is shown a photograph of a carload of unusual yellow poplar which was recently received at the plant of the Knoxville Veneer Company, Knoxville, Tenn. The carload of logs, as seen, all came from one tree and are altogether unusual in their fine symmetry and large size. These logs will be cut into veneered door stock.

SOME YELLOW PINE VENEER LOGS THAT ARE QUITE UNUSUAL IN CHARACTER. RECEIVED BY KNONVILLE VENEER COMPANY, KNONVILLE, TENN.

Buys Virginia Hardwoods

A tract of 25,000 acres of a new databaser in southwestern Virginia was recently purchased by the tenent of Timber Corporation for the sum of \$250,000. The deal carries with it only the timber nights, while the coal rights are reserved by the fermer where, being valued at \$2 mornion

East Jordan Lumber Company Loses Mill

At six o'clock on the afternoon of Wodo'sday, December 17, the hendock mill known as Mill B of the Fiss berdan Lumber Company at East Jordan, Mills, was totally destroyed by ire. The configuration consumed the mill structure and destroyed the circular mill with a band resaw. The resulting loss was \$20,000, of which \$15,000 is covered by insurance. The company announces that it already has under construction a larger and more modern plant. Mill A will operate day and night until the new mill is finished, but aside from this, operations will go on about as usual.

Pertinent Information

Splicing a Sand Belt

There has been great divelopment in late years in belt sand papering machinery, and nearly every wood-working institution in the country is now a user of some machinery of this kind. But the development of a sand belt for such reachinery has not been along highly be called successful, inasmuch as the ordinary in also for remind, them left the belt thicker at the joint than anywhere else, which joint passes over the work with a jerk, causing imperfections on work, and making the lafe of a belt very uncertain.

A mean's for cutting and perfecting a tapered or beveled joint has been invented by the C. H. Driver & Kerr Company, 1322 Sixteenth street, Racine, Wis. It is claimed that its machine takes a roll of material, cuts the tapered joints to the length of bela required, passing it on through and revolling on a spool through which a rod can be run so that the roll may be hung on brack ts for convenence in handling. When a belt is wanted, all there is to do is to unroll to the joint, cut off and cement the tapered ends together, which makes a perfect belt with the joint no thicker than any other point on it. The ordinary method has been to measure and cut off a desired length from a roll of material, and then glue a strip across the two ends, which, of course, left a joint.

A New Lumber Piling Jack

There is on the market a device which insures the piling of lumber of all kinds without injury to its surface. It facilitates piling on account of the ease and rapidity with which this work may be done. The device consists of a head on which are mounted a series of pointed teeth. These being inclined slightly enable the lumber to be pushed upward along their surface, but prevent it from slipping downward. The head may be easily revolved in any direction. A spring attached to the side of a head brings it to its original position as soon as the board releases it, so that the jack is always ready for instant action.

The heaviest and widest boards may be handled without danger of marring their face or of splitting, as is apt to occur where a pointed stick or post is used.

In the accompanying illustration No. 1 is to be attached to a squared pole and inserted between the layers of lumber at any point desired. No. 2 may be fastened to the top of a 4x4 post or to the upright of a yard truck.

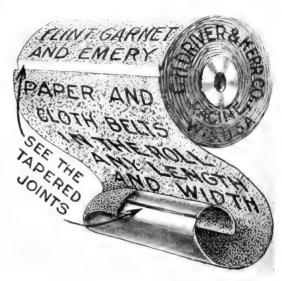

The jack is manufactured by E. C. Atkins & Co., Inc., Indianapolis, Ind., and was ready for delivery about Nov. 1.

Short Day on Saturday Unlawful at Arkansas Mills

In the newspapers of the Southwest of late there has been a great deal said by Arkansas State Labor Commissioner J. C. Clary, in regard to sawmill operators violating the law which provides against working

No. 2 ATKINS LUMBER PILING JACK the employes for more than ten hours per day. Under the custom that has grown up an the state, mill operators have herestofore worked them for ten and one half hours daily during the first five days of the week, in order that the men might be able to get off two and one half hours earlier on Saturday. This practice, Commissioner Carry contends is in violation of an Arkansas statute. Recently Commissioner Carry called on Attorney General Muscose for an opinion in the matter, and in

THE MODERN WAY OF SPLICING BELT SANDERS

reply Judge Moose said in part as follows: "You state that some of the sawmills of the state have adopted the custom of compelling their employes to work ten and one-half hours five days in the week and seven and one-half hours on Saturdays, which on the average make ten hours a day for the six working days. You ask whether that is lawful under the provision of the act aforesaid. I do not think it is. Section 1 of the act provides that ten hours shall constitute a legal day's work for all classes of working men and laborers engaged in the operating and constructing of saw and planing mills in this state. If ten hours is a legal day's work, ten and one-half hours is not legal.

"You will observe, too, that the act provides for a day's work, and not a week's work. If it is lawful to work ten and one-half hours the first five days, it is lawful to work fifteen hours the first four days of the week and then compel the men to do nothing the remainder of the week. You will also notice that in Section 3 of the act, it is provided that each day's violation of this act or any part thereof shall be considered a separate offense. The act provides that nothing therein shall prevent the employer or employe from contracting for a less number of hours for a legal day's work than is mentioned in Section 1, but it does not provide that they may contract for a greater number of hours. So it is my opinion that when the company operating the sawmill requires its employes to work more than ten hours in any one day, it violates not only the letter, but the spirit of the act."

The millmen say that by this agitation Commissioner Clary is going to work a hardship on the employes rather than upon the mill operators. They state that the practice of working the men for ten and one-half hours per day for the first five days and thereby allowing them to get off two and one-half hours earlier on Saturday, has grown up at the request of the employes; that so far as the manufacturers are concerned they would much prefer having six days per week on the uniform time of ten hours. They also state that if they are not to work the repair men after the 6 c'clock whistle blows in the evening, it will mean that the plant will have to be closed down when repairs are necessary, and thereby the employes will be forced to lay off. This, the mill men contend, is harder on the employes who depend on their time for their living than it is upon the mill operators.

There may be fifty per cent of waste in manufacturing narrow hardwood and parquetry flooring but this product helps helps save a lot that might otherwise be waste for the mill man.

Hardwood News Notes

────≺ MISCELLANEOUS ≻───

The Arkaners Hickory Company L. Joen incorporated at Maryell, Ark The concern La a capital stock of \$5,000

The Copy - Zook & Mut other Company of Nappance, Ind., aunounces that Altert and Chartes Mutschor have withdrawn.

The Leab Handle Company Las been incorporated at Bridgeport, La., with a contal of \$15,000

The Maple Chair Company of Shandaken, N. Y., has sold out to the

The Foss Woodworking Company has incorporated at Cleveland, O., under that name, the capital stock being \$10,000.

The Huddleson Lumber and Supply Company has been incorporated at Huntington, W. Va., with a capital stock of \$50,000.

W. S. Sterrett, sales manager for the M. B. Farrin Lumber Company, Cincinnati, spent several days in Chicago on business recently.

Frank Donnell, sales manager for Young & Cutsinger, Evansville, Ind., was in Chicago for a couple of days recently on a hurried business trip.

Henry Ballou, general manager of Cobbs & Mitchell, Inc., Cadillac, Mich, was in Chicago for a tew days of last week, accompanied by Mrs. Ballou. The purpose of this visit was to take care of some necessary shopping in connection with the Christmas season.

T. H. Dunlap of the Dunlap Lumber Company, Nashville, Tenn., spent a few days in Chicago recently.

F. W. Dugan of the Dugan Lumber Company, Memphis, Tenn., spent a few days of last week with the local trade on business.

Thomas McFarland, the hardwood man of Cairo, Ill., visited the local trade recently.

Robert Maisey of Maisey & Dion, Chicago, left on December 17 for a buying trip of several days' duration to mill points in southern Tennessee. Mr. Maisey said he expected to pick up several large quantities of stock

Hardwood Record acknowledges a very handsome publication issued by the Northern Hemlock & Hardwood Manufacturers' Association, through its secretary, R. S. Kellogg. The booklet is designed to increase the sale of hemlock, and judging from its character it should certainly do so. Mr. Kellogg is to be congratulated.

The Lumbermen's Club of Chicago held another of its informal dances at the club rooms on Wednesday evening, December 17. As at former and similar functions, Miss Ruth Stonehouse was engaged to teach the new dances.

HARDWOOD RECORD acknowledges the receipt of a very valuable book entitled "The Tribulations of Tim Burr Owner." The pamphlet is well printed and illustrated with pen drawings, each showing a forest fire scene, and the specific cause in each case. There is a verse in each of the pictures which tells rather humorously of the cause of the fire. The purpose of the book is to secure increased support for the Northern Forest Protective Association on the part of timber owners in Michigan. This association is located at Munising, Mich. Frank B. Wyman is manager. The association aims to protect forests.

HARDWOOD RECORD acknowledges receipt of a Christmas greeting in the form of a handsomely engraved and embossed card from the Tennessee Oak Flooring Company, Nashville, Tenn.

E. C. Atkins & Co., Inc., the saw manufacturers of Indianapolis, have gotten out their seasonable greetings with the usual individual touch which this concern puts into all its publicity matter. The greeting is in the form of an engraved announcement with the usual Christmas felicitations in each cavelope and enclosed the personal cards of N. A. Gladding and Henry C. Atkins.

HABDWOOD RECORD acknowledges a handsome memorandum book bound in leather gotten out by Williams Brothers Company, Cadillac, Mich.

The Gorham Brothers Company, panel manufacturers of Mount Pleasant, Mich., have issued a very handsome calendar of a practical nature and of pleasing appearance

The Midland Lumber Company, Parkersburg, W. Va., has maintained its reputation this year for the high character of the calendars which this concern has been getting out for years past.

The John B. Yates Lumber Company, Pennsboro, W. Va., has issued a very artistic calendar.

Russe & Burgess, Inc., Memphis, Tenn., have expressed their season's greetings to their friends in the trade by means of a pleasingly engraved card.

The Regan Printing House of Chicago has just published a handsome and exhaustive book entitled "America". Triumph at Panama," by Ralph Emmett Avery. The book is a complete history of the construction of the Panama canal from ocean to ocean, and affords the most beautiful photographs the world has ever seen.

Christmas greetings have been sent Hardwood Record by G. D. Crain, Jr., Louisville, Ky., in the way of a beautifully engraved card expressing his best wishes for Christmas and the New Year.

≺ NEW YORK ≻

The Building Material Men's Association of Westchester held its annual meeting and electron at White Plains on December 11, at which time a good number of the members were present. John F. Dinkel of the Dinkel & Jewell Company. Tarrytown, was elected president, succeeding E. M. Yerks, who had served several terms. Mr. Dinkel has always been active in the work of the association and an ardent supporter of all the principles of trade organization. E. N. Leete, Mount Kisco, was elected vice-president; Robert Haviland and Tracy Cowen were re-elected treasurer and secretary respectively.

The association will hold its annual dinner at the Manhattan Hotel, New York on January 27.

The association is co-operating with others in an effort to secure a new lien law in New York.

The Acorn Lumber Company, hardwood wholesaler of Pittsburgh, has opened an office at No. 1 Madison avenue, in charge of G. H. Trump.

As a result of efforts on the part of the National Wholesale Lumber Dealers' Association the New York Central & Hudson River railroad lighterage rule has been changed in the following particular:

"Flooring, ceiling or other lumber stock (whether for export or local delivery), less than 4 inches wide, 1 inch thick, or commercially known as "finch lumber," and 6 feet long, in either dimension, unless in bundles, and excepting joist and scantling."

Heretofore some lumber dressed to % was lightered at an extra charge. Under the new rule such lumber will now be delivered in New York lighterage free.

The new building code will not be reported to the Board of Aldermen of the present administration. There is unquestionably some demand for a new code that will assure more protection against fire, but it is reassuring to note the failure of the latest effort, which was a very bad makeshift.

───≺ PHILADELPHIA ≻──

Charles K Parry & Co., owners of the Carolina Spruce Company, Pensacola, N. C., report mill getting out some excellent stock, and that they have over two million feet of hardwood on sticks. Within thirty days they will cut only spruce and hemlock. Trade has kept up fairly well, which is attributed to the fact that they are carrying certain grades which are unusually scarce at this time. Mr. Parry is spending a week at the mill sizing up the stock situation.

John W. Floyd of the Floyd Lumber Company, reports things moving along satisfactorily for this time of the year. No decided change in the situation is looked for until after the first of the new year.

Ralph Souder of Hallowell & Souder testifies to fair trading right along. More or less of a business hiatus is to be expected during the holidays. After January 1 a little more buoyancy is looked for.

Wistar, Underhill & Nixon are preparing for a holiday rest. Their salesmen will all spend Christmas in their respective homes. Mr. Underhill says in some lines prices have been well sustained, in others there has been some shading, but they are not disposed to disparage their share of business. R. Wyatt Wistar is spending some time at their mill in Sunter, S. C.

Owen M. Bruner of the Owen M. Bruner Company says business is sporty, but a fair volume of trading is admitted for this time of the year. They look for a more copious activity after the holidays. The company is giving out a few handsome Maraschino white pine desk calendars as souvenirs.

The D. B. Curll Lumber Company has no fault to find with conditions. Mr. Curll says they have been able to place their goods right along and have no unusual accumulation of stock at mills.

T. W. Noch of the Oregon Lumber Company, Baker City, Ore., while visiting his mother here, is taking in the local trade, and has called at the Lumbermer's Exchange. A. S. McGaughan, who makes his headquarters at the Exchange rooms, is the Philadelphia representative of this western concern.

Schofield Bros., owners of the Saltkeatchie Lumber Company, Schofield, S. C., and the Schofield, Lance Company, wholesale distributing yard, Reading, Pa., report a fair volume of business right along for this time of year. Frank E. and Robert W. Schofield and George F. Lance, Jr., of the Reading branch recently visited Schofield, S. C.; also made a tour of all the mills in which they are interested. Frank E. Schofield says everything is moving along in good shape and there is no accumulation of stock anywhere.

S. P. Bowers of the S. P. Bowers Company says business has not been so bad considering present conditions and October was the best month they ever had. Railroads are retrenching somewhat at this time, but it is only a matter of time when they will come into the market and probably pay more money for lumber than they could buy it for now.

-----≺ BUFFALO >-----

M. M. Wall has secured for Buffalo the next convention of the National Wholesale Lumber Dealers' Association, which will be held on March' 4 and 5. It is expected that 500 or more lumbermen will come here for the meeting. Mr. Wall, who is one of the trustees of the association, was in New York about the middle of the month, to attend a meeting of the board.

I. N. Stewart, who has been in the hardwood business at 892 Elk

street for about twenty years form it was a member of Mead & Stewart, and latterly as a member of I. N. Stewart & Bro., has sold out his yard to O. E. Peager, whose yard adjoins on the east. This is one of the most important business changes in the hardwood line in some time and by it Mr. Yeager acquires a good sized general stock of different hardwoods, including oak, poplar and cherry. Mr. Stewart is now building an apartment house in South Buffalo and may continue in this line of business in future.

The planing mill formerly owned by the Joseph Metz & Sons' Company which went into bankruptcy, has been sold to H. C. Tucker, a local broker, who has not yet made known his intention regarding the property.

- O. E. Yeager will attend the meeting of the trustees of the National Hardwood Lumber Association in Chicago on January 15 and will carry an invitation from Buffalo for the holding of the annual convention here next June.
- J. W. Welch, who is now in the hardwood business in Memphis with his brother, is expected to spend the holidays in this city, "Jack" Wall, son of J. B. Wall, is also coming home from Alabama, where he has been for several months.

James A. White, president of the National Lumber Company, has been looking after lumber business in Michigan, spending several days recently in Muskeyon and Boyne City.

Miller, Strum & Miller state that the hardwood trade is as good as it was a month ago, though not active. The yard is selling fair hardwood stacks, especially oak and manie.

Davenport & Ridley were elected members of the Buffalo Lumber Exchange at the last meeting of that organization. Mr. Ridley lately spent a week in Pennsylvania on lumber business.

The last lumber cargo to arrive by lake this year was 450,000 feet of maple for the yard of H. H. Salmon & Co. The vessel was detained several days at Port Colborne by storms.

Hugh McLean is planning to visit the southern mills of his lumber company in January. The Memphis mill is as usual closed down for about a week over the holidays.

W. L. Blakeslee, of Blakeslee, Perrin & Darling, has returned from an eastern business trip and reports the sale of a fair amount of different hardwoods while away.

The Standard Hardwood Lumber Company reports that business is quiet, but it expects an early revival and a big year. The company is bringing down hardwood lumber from its mills on the Cumberland by barge and landing it at Burnside for shipment this way.

Taylor & Crate will carry out the improvement of their hardwood yard at Black Rock in the spring, when they expect to put in a large amount of stock.

──≺ PITTSBURGH ≻──

George D. Dubarry, aged sixty-three, for over thirty years leading lumber dealer in Pittsburgh, died at his home at 5321 Penn avenue, December 17.

The United States Steel Corporation has started work on shops and also improvements at Greenville, Pa., to cost \$400,000. These are on account of the Bessemer & Lake Erie Railroad which is owned by this company.

The Retail Lumber Dealers' Association of Pennsylvania is working hard on the program for its annual convention to be held at the Monongahela House in this city February 11 and 12. Secretary H. V. S. Lord announces that the attendance at this convention already assured will make it much the largest convention of its kind ever held in Pennsylvania.

I. F. Balsley of the Balsley & McCracken Lumber Company finds some very good manufacturing trade going around, although there is sharp competition to get it. He has made several successful trips down East this fall.

W. W. Wallace, head of W. W. Wallace & Co., a well known lumberman of Apollo, Pa., died December 15 at his home in that town. He was one of the best known dealers in the Allegheny Valley and was a prominent member of the Retail Lumber Dealers' Association of Pennsylvania which was represented at the funeral by Paul McCracken of Leechburg, Pa.

The steel concerns in the Pittsburgh district last week for the first time in a long period reported an increase in inquiries. Many plants and furnaces are starting up now and there is a general feeling that the bottom has been touched and that business is going ahead in good shape after January 1.

The Pittsburgh-Buffalo Company, one of the biggest lumber buyers in Pennsylvania, together with its affiliated concerns, was placed in the hands of receivers December 6. Fred R. Babcock of the Babcock Lumber Company was named receiver for the Pittsburgh-Buffalo Company. It is stated that in all probability creditors will be paid in full as the members of the companies are estimated to be worth \$11,000,000 more than its liabilities.

The Allegheny Lumber Company, with a smaller sales force than last year, has done \$150,000 worth more business. It has paid eighteen per cent in cash dividends besides adding largely to the cash surplus. The company regards the outlook for 1914 as very promising.

The American Lumber & Manufacturing Company has had a very good year in business, reporting about the same amount of lumber sold as in 1912. President W. D. Johnston is inclined to believe that next year will show a better all around business.

J. N. Woollett, president of the Aberdeen Lumber Company, has added a new cypress department to his business and expects henceforth to make cypress one of the leading lines in his trade. He has so successfully handled the gum and cottonwood business the past few years that his dealings in cypress are already assured on a large scale.

=≺ BOSTON **>**=

The Carroll & O'Kelly Company, Boston, has been incorporated to deal in lumber. The capital stock is \$10,000. J. P. Carroll is president and John F. O'Kelly of Chelsea, Mass., is treasurer.

The tramp steamer Norheim has arrived at Boston with a cargo of 656 logs of mahogany measuring 319,000 board feet. This shipment was unloaded at the yard of the Palmer & Parker Company, fancy hardwood dealers, Charlestown.

The plant of the Essex Wood Turning Company, Essex, Conn., which has been operated for a long time by a receiver has been purchased by Daniel T. Doane, who plans to operate it.

The table factory of David R. Jones, Merrimac, N. H., has been destroyed by fire together with a large amount of lumber. The loss is estimated at \$10,000 with insurance of \$2,000. Mr. Jones hopes to make the control of \$10,000.

===== ≺ BALTIMORE >=

The annual meeting of the National Lumber Experters' Association, which will take place in Chicago on January 22 and 23, 1914, is to be held at the Sherman Hotel, which will be headquarters. Secretary J. McD. Price is now engaged in making preparations for the gathering getting reports in order and otherwise mapping out the program. It is yet too early to say just who will go from Baltimore, though John L.

=< COLUMBUS ≻=

The Ironton Lumber Company of Ironton, O., started operations recently after being in idleness for some time

The Electrical Cigar Box Company has taken over the plant of the Ironton Plow Company at Third and Vine streets, Ironton, O., which will be operated in the future as a cigar box concern. It is planned to make about four thous aid boxes per day.

The H. D. Brasher Lumber Company of Columbus, O., has closed a deal for the leasing of the three-story brick building at Fourth and Gay streets which will be remodeled into storerooms and factory space. The building is 6212 feet on Fourth street and 93% feet on Gay street.

At a recent meeting of the Columbus Manufacturers' and Jobbers' Association it was decided to start an advertising campaign boosting Columbus as a commercial center. The advertising will be done on a broader scale than ever before attempted. Beginning January 1, 50,000 circulars will be sent out to prospective customers in all parts of central.

The joint legislative committee named to investigate and report on the plan to be followed in operating canal systems of the state has made a report in which it takes a middle course. The report recommends the enlistment of the federal government in an effort to determine the feasibility of converting the canals into a cross state waterway system between the Ohio river and the Great Lakes. The committee deems it unwise for the state to try to use the canals for transportation purposes at the present time.

The Galion Lumber Company of Galion, Ohio, has been awarded the contract for the crection of a freight depot at Wadsworth, O.

In order to open an outlet for the protection of its mills in West Virginia, the Wade-Fisher Lumber Company of Canton, O., has been incorporated with a capital of \$25,000 by A. Buckwalter, Frank Wade, C. C. Fisher, Sarah Buckwalter and Rowenna Wade.

Arrangements have been completed for a "Made-In-Columbus" exposition to be held under the auspices of the Columbus Manufacturers' and Jobbers' Association some time in June, 1914. It is planned to exhibit all Columbus-made goods in the downtown business section of the city.

In affirming the Common Pleas Court of Lawrence County in awarding a judgment for damages to the W. G. Ward Lumber Company against the Chesapeake & Ohio Railroad, Judge Thomas A. Jones, in the Lawrence County Court of Appeals, ruled upon the liability of carriers. In his opinion he declares that a consignment beyond the initial carrier's line must be regarded as a through contract. The connecting carrier, he says, is the agent of the original receiving carrier, and the receiving carrier is liable for defaults of the connecting carrier. Railroads may, however, exempt themselves from this special liability by contract.

W. M. Ritter of Columbus, O., the well known hardwood lumberman, is coming into much prominence as a horseman. His chestnut saddle mare, "Marie Louise," recently created a sensation at the Madison Square Garden show in New York, winning a red ribbon in two of the biggest and closest shows. Mr. Ritter now has one of the most select stables of saddle horses in the entire country. The mare, Marie Louise, attracted, so much attention that M. Feline, the noted French judge, who rode this mare in the ring, declared her to be above some of the most famous thoroughbreds in the East. She came from the celebrated Point Au View stock farm at Maysville, Ky.

The Farmers Lumber Company of Canfield, O., has been incorporated with a capital stock of \$50,000 to deal in all kinds of lumber. The incorporators are J. F. Harris, W. J. Harris, G. W. Harris, H. L. Weikart and C. A. Welsh.

The nominating committee of the Columbus Builders and Traders' Exchange has placed before the exchange the following ticket which will be voted upon at the annual election in January: President, L. R. Moor, B. M. Freeman; first vice president, Stephen Stepanion, R. L. Watson; second vice president, W. H. Beckett, F. T. Whitacre; directors, five to be elected, William Piez, G. W. Mooney, H. E. Kunzman, Albert Joyce, E. R. Clarridge, J. C. Davidson, E. Elford, L. G. Kallmerton, David Lehman and O. K. Kieble.

The Marquette-Kerr Lumber Company of Youngstown, O., has been incorporated with a capital stock of \$25,000 to deal in lumber of all kinds. The incorporators are William E. Kerr, H. L. Marquette, Carrie Kerr, Grace D. Williams and Elizabeth Marquette.

The Foss Woodworking Company of Cleveland, O., has been incorporated with a capital of \$10,000 to buy and sell and deal in all kinds of lumber. The incorporators are R. O. Crampton, W. W. Johnston, C. A. Davidson, E. E. Nicols and H. J. Woodworth.

The Sandusky Lumber & Box Company has filed papers with the secretary of state reducing its capital stock from \$100,000 to \$1,000.

C. W. Jaques of Ashtabula, O., representing the Pioneer Pole & Shaft Company, has closed a deal with the officials of the Bacher Iron & Steel Company whereby the latter concern takes over the plant on East Miller

It will be nited up for ascort the new concern at once. The e centile Bacher Company is a \$100,000 corporation

Fire of unknown origin completely destroyed the plant of the R. C. Bowlus Saw and Finishing Mills at Latham, O., recently
At Johnstown, O., J. B. Hedges Las been succeeded by the Johnstown

John Frederick Koss, a member of the Koss & German Lumber Company of Fostoria, O., died of pneumonia recently at the age of thirty nine years. He held the title of yard superintendent of the concern.

The Cullen & Vaughn Company of Hamilton, O., has been incorporated with a capital stock of \$300,000 to deal in lumber and building supplies. The incorporators are James K. Cullen, James W. Cullen, F. K. Vaughn, S. M. Goodman and W. E. Shepherd.

The Great Northern Lumber Company of Cleveland, O., has been incorporated with a capital stock of \$50,000 to buy, sell and deal in lumber of all kinds. The incorporators are R. M. Austin, W. J. Austin and Harold Ferguson

The Hayward-McCready Lumber Company of Cleveland, O., has been incorporated with a capital stock of \$50,000 to buy, sell and deal in all kinds of lumber. The incorporators are W. H. Ockel, C. M. Smead, William K. Kidd, F. D. Carson and E. S. Brubaker. John R. Gobey of John R. Gobey & Co., reports a fairly good trade

in hardwoods with prices holding up well. He believes that business will be good after the first of the year.

R. W. Horton of the W. M. Ritter Lumber Company reports a good trade in hardwoods both from factories and from yards. He says the factories are the best buyers at this time. Prices are firm and there is no cutting of any consequence. Dry stocks are fairly scarce

J. A. Ford of the Imperial Lumber Company reports a fairly good demand for hardwoods with shipments coming out well, especially from West Virginia sections.

The Sowers-Leach Lumber Company reports a fairly good market for hardwoods, although there is a little slowness at this time which will probably prevail until after the inventory period.

—∹ INDIANAPOLIS ≻—

Mr. and Mrs. W. W. Knight have gone to Leroy, N. Y., for the holidays, Mr. Knight is a member of the Long-Knight Lumber Company.

The Hoosier Veneer Company has been having a big run and was obliged to work night and day for several weeks, but is now catching up on its business.

A dinner to several hundred newsboys and messengers was given in Grace M. E. Church on the evening of December 22 by S. P. Matthews, resident manager of the South Arkansas Lumber Company.

Charles P. Henderson, president of the Henderson Motor Car Company, has become vice-president of the Regal Automobile Company, Detroit, but will act in an advisory capacity for the Henderson company.

Building operations in the city this year have shown a gain of a few thousand dollers over those of 1912. Fireproof and frame construction have shown substantial gains, while brick and concrete construction have

The eighteen building trades organizations that were on a sympathy strike beginning November 24 returned to work on December 15 and building operations have been resumed.

A sixteen story building is to be erected within the next few weeks at the southeast corner of Washington and Illinois streets by the Occidental Realty Company.

N. T. Keasey, well-known in hardwood circles and proprietor of a saw and planing mill at Brazil, died at his home near that city a few days He was seventy-seven years old and is survived by a widow and several children.

The Talge Mahogany Company is expecting the arrival of a large cargo of mahogany logs from the west coast of Africa very shortly and following the arrival of the cargo will have to work night and day for some time, it is expected.

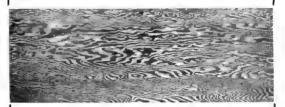

At a meeting in this city December 16, a merger of the Indiana Manufacturers' Bureau and the Indiana Manufacturers and Shippers' Association, under the name of the Indiana Association of Manufacturers and Commerce, was perfected. Among those who were elected to the board of directors were C. H. Barnaby, a prominent hardwood lumberman, Greencastle; H. C. Atkins, president of E. C. Atkins & Co., Indianapolis; M. W. Mix, president of the Dodge Manufacturing Company, Mishawaka, and J. M. Heron of the Rex Buggy Company, Connersville,

----≺ MEMPHIS **>**=

The weather has continued very favorable for logging operations in this territory during the past fortnight and reasonably good progress has been made therein. The movement of logs by rail has increased somewhat and there has likewise been some increase in river receipts, with the result that the mills have plenty of timber to keep them in steady operation. There has been only a comparatively small amount of timber prepared for shipment in the Mississippi delta and this is the principal complaint made in reference to the logging situation. Manufacturing operations, however, have not been interfered with so far and, with the weather so open, it is possible to continue work in the woods and possibly to get out a large amount of logs to prevent any serious interruption to milling.

William Pritchard, president of the Citizens Bank & Trust Company,

THE GLUE THAT IS APPLIED COLD -

In Flush Veneered Doors

The chief consideration is uniformly highgrade glue. Manufacturers of this modern type of door realize that its development has been retarded because the unavoidable lack of uniformity in other types of glue makes it impossible to know how long a door will stay in condition. The

Use

Of vegetable glue insures absolute uniformity because of the very nature of preparing it and because every pound of our raw material is rigidly inspected.

Vegetable Glue

Is also a rigid and permanent adherent; will not blister in sanding; has no disagreeable odor; will not deteriorate in standing-for a week if necessary; and can be applied cold without any heating application of any kind in the glue room. In addition, the average saving over Perkins Glue Co., South Bend, Indiana.

Dear Sirs:—It is note: 1

a veneer door.

Dear Sirs:—It is now about a year since we added a vencer door department to our operations. Deciding on the glue which would give the best results, we con-sidered the most important matter in connection with this near department.

a veneer door department to our operations. Deciding on the glue which would give the best results, we considered the most important matter in connection with this new department.

Investigation convenience us that your product was the one we scanted in order to turn out the most dependable doors and panels and it has been gratifying to find that it has given us low cost as well as superior quality.

Yours truly,

CHEHALIS FIR DOOR CO.

plain and quarkered real

has purchased the nativest of H. M. Wheeler in the firm of J. W. Wheeler A Company, Mid on Ark. Mr. Pritchard and C. L. Wheeler will be in control of this firm in future. Headquarters will be maintained at Memphis but the mill will remain at Madison, Ark. There will be no change in the personnel except as outlined above. J. W. Wheeler & Company is a partnership, with the result that there will be no change in others. The mill of this firm found it necessary sometime ago to close down on account of the low stage of the St. Francis river which made it impossible to move out logs. The mill, however, has recently resumed operations and has a good timber supply ahead.

The Johnson-Tustin Company has been formed here with offices in the Randolph building. For the present it will engage in the wholesale handling of hardwood lumber only but is arranging to take the cut of a number of mills in this section. C. R. Tustin, formerly with the T. B. Stone Lumber Company, the Gayoso Lumber Company and the Lamb-Fish Lumber Company, is vice-president and secretary. W. T. Johnson, of Cincinnati, is president and treasurer. The company has a capital stock Mr. Johnson has been making his home at Cincinnati for a of \$15,000. number of years but shortly after January 1 will move his family to

John M. Smith, who has been in charge of the business of the W. P. Brown & Sons Lumber Company, Louisville, Ky., at Dickson, Tenn., announces that he will go into the wholesale handling of hardwood lumber under his own name, with headquarters at that point. Mr. Smith has been in charge of the business of this firm at Dickson for several years and has been quite successful in the management of its affairs. He says that the relations between himself and the firm have been extremely pleasant and has made it quite clear that, while he will engage in the hardwood lumber business, he will not be a direct competitor of the W. P. Brown & Sons Lumber Company.

A. L. Foster, who was for a number of years assistant treasurer of the J. W. Thompson Lumber Company at Memphis, has accepted the position of traffic and sales manager for the Boeuf River Land and Lumber Company, at Logtown, La. Since the dissolution of the J. W. Thompson Lumber Company, Mr. Foster has been engaged in the life insurance business. He brings to his position a wide experience in the handling of hardwood lumber and also in the solution of traffic problems.

The Bentonville Cooperage Company has purchased the property on which the Keller wagon factory at Joplin, Mo., was located for a consideration of \$10,000 and next spring will remove all of its tight cooperage manufacturing equipment to that point. The machinery for the manufacture of slack cooperage stock will be left at Bentonville. More satisfactory rates for handling both raw material and finished product are responsible for the decision of the company to make this change in its business

The Mengel Box Company has purchased 3,300 acres of timberland near Tiptonville, Tenn., from the Harris estate for a consideration of \$112,500. The sale was made in order to wind up the estate in question. purchasing firm will use the timber on the land in its box and veneer plants at Louisville and elsewhere. This is the largest timberland transac-tion in this section for sometime. The land was bought fifteen years ago by J. C. Harris for \$16,000. This represents an increase of about six hundred per cent.

The Anderson-Tully Company has purchased the Patton interests in the Patton-Tully Transportation Company. Following this transfer, C. E. Patton has resigned and has been succeeded by W. C. Wilcox who will have charge of the operations of this company. It will operate four tow boats, which are engaged in the towing business, with particular reference to the handling of logs and lumber. The boats are: Dolphin No. 3, Kit Carson, Joy Patton and Satellite. In addition there are five derrick boats, sixteen barges and a machinery boat. The company also owns a dry dock on Wolf river for the repairing of boats operated by it as well as by other firms in this section. C. J. Tully, vice-president of the Anderson-Tully Company, has been one of the principal stockholders in this transportation company for several years and the absorption of the Patton interests by the Anderson-Tully Company has created no particular surprise

The new mill of the Crenshaw-Gary Lumber Company at Richey, Miss., has been completed and placed in operation. There was one band mill on this property when the interests of the Norton Lumber Company were absorbed by the Crenshaw-Gary Lumber Company. The new mill will bring the total output to approximately 70,000 feet per day.

The Memphis Shingle Company has applied for a charter. The capital stock is \$2,500. The incorporators are R. E. Montgomery, R. E. Montgomery Jr., W. H. Burris, W. H. Lewis and W. T. McLain.

The Jorgenson-Bennett Manufacturing Company has recently installed heavy band re-saw driven by a forty horse power electric motor. This firm has been doing a great deal of work for the Memphis Siding and Lumber Company and the increase in its equipment has been made in order to take care thereof.

----≺ NASHVILLE >--

Major Harry Burgess of this city, United States engineer in charge of improvements on the Cumberland river, is responsible for the discovery of an important omission in a recent published statement of the timber resources of the upper Cumberland river. The published statement purported to give a statement of all timberlands in the upper Cumberland

section, when as a matter of fact it only included the timber on farms classed as cultivated. Major Burgess shows that 600,000 acres of timberlands not classed as part of cultivated farms was omitted, which means a vast amount of timber wealth, and a strong argument for the Government to continue the improvement of the Cumberland, so as to give navigation at all seasons. The upper Cumberland river has long been an Important source of supply for the Nashville hardwood market, furnishing some 20,000,000 or 25,000,000 feet of timber and lumber annually. The timber has been drawn upon heavily, and there is difference of opinion among lumbermen as to how long the supply will last.

The Mengel Box Company of Hickman, Ky., has made a big purchase of land in Lake County, Tennessee. The company has closed a deal for about 3.700 acres of land fourteen miles south of Hickman, known as the famous Judge Harris property, and said to be richly timbered. The price paid for the land was \$112,500. The purchaser will develop the land and ship the timber to its plant at Hickman.

The Coosawattee Lumber Company, recently incorporated at Cookeville, Tenn, with authorized stock of \$25,000, announces that it will operate a mill at Talking Rock, Ga., and develop some timberland in that section.

The Johnson-Tustin Lumber Company of Memphis, with authorized capital stock of \$15,000, has been granted a charter by the secretary of state. Clyde Johnson, W. Youtsey, Robert E. Kreimer, W. Thomas Johnson and C. R. Tustin are incorporators.

Judgment for defendant was entered in the case of J. H. Vestal and others against the Ducktown Copper Company, tried in the United States Court at Chattanooga. Plaintiff sought to recover \$37,500 for alleged damage to timber on lands in Tennessee and Georgia by fumes from defendants' copper plant.

The Consolidated Chair Corporation of Greeneville, Tenn., with authorized capital stock of \$100,000, has been granted a charter by the secretary of state. O. P. Lutz is at the head of the corporation. The company has acquired the big plant of the Greeneville Chair Company, recently sold by court order in receivership proceedings, and will put the plant into operation again.

John M. Smith, who for five years has managed the branch plant of the W. P. Brown & Sons Lumber Company at Dickson, Tenn., has resigned his position to engage in the wholesale lumber business at Dickson on his own account. Mr. Smith is one of the most successful lumbermen in this section. His relations with the Louisville company were in every way pleasant, but he deemed it best to enter business for himself.

The traffic committee of the Nashville Lumbermen's Club, of which A. B. Ransom is chairman, has been authorized to proceed with a complaint before the Interstate Commerce Commission against the Louisville & Nashville railroad and other lines seeking to gain milling in transit privileges granted to other cities.

Counsel for the Louisville & Nashville Terminal Company, controlled by the Louisville & Nashville and Nashville, Chattanooga & St. Louis railroads, has refused the request of the Nashville city commissioners to grant more advantageous reciprocal switching privileges to the Tennessee Central railroad. Counsel claimed that it would be unjust to require their companies to turn their terminal facilities over to a competing The city may carry the matter to the Interstate Commerce Commission. Lumbermen and other shippers will watch the outcome with much interest, as the granting of the privilege would be advantageous to the shippers.

=≺ LOUISVILLE >=

The Louisville Hardwood Club has had several important meetings recently, outside speakers taking up most of the time and discussing subjects of general importance. S. B. Lynd and A. Y. Ford, local bankers, spoke on the state tax system and prospects for its reformation, while Philip S. Tuley, president of the Kentucky Manufacturers' and Shippers' Association, made a talk on "Workmen's Compensation," with special reference to the bills which will be introduced on that subject in the state legislature next month. The session begins January 6. The passage of legislation of some kind on this subject seems to be assured. L. B. Finn, chairman of the state railroad commission, is to speak shortly on the prospect of increasing the powers of the state railroad commission, while R. A. McDowell, a well-known attorney, will tell the lumbermen about the income tax.

The father of Stuart R. Cecil, president of the Louisville Hardwood Club, and an officer of the Booker-Cecil Company, died recently. He was Dr. John G. Cecil, and was one of the leading physicians of the South.

- T. M. Brown of the W. P. Brown & Sons Lumber Company has returned from a business trip to New York. The company is considering installing a planing mill in connection with its sawmill at Fayette, Ala.
- J. C. Wickliffe, secretary of the C. C. Mengel & Bro. Company, recently returned from a trip abroad. Speaking of foreign trade conditions he said that business is good in England, France and Scandinavia, but quiet in Germany, Holland and Belgium. Tight money is the cause of the business depression in the latter countries.

An examiner of the Interstate Commerce Commission recently heard the complaint of the North Vernon, Ind., Lumber Company in Louisville. The company complains that the rate on lumber from Dyersburg, Tenn., to North Vernon is greater than from Dyersburg to Cincinnati, aithough North Vernon is an intermediate point. Frank Platter, president of the company, conducted the case for the complainant.

Walnut for Export

Thirty years' experience in the handling of walnut logs for export enables me to furnish guaranteed prime quality stock.

I am constantly in close personal touch with the source of supply of export walnut logs and know exactly what I am getting at all times. In fact, a number of the best foreign houses are taking up my logs on my own recommendation.

My supply enables me to fill orders of any size in carload lots without delay.

Highly Figured Walnut

As a result of close personal supervision of log purchases my stock of highly figured wal-nut in long wood and stumps contains only the choicest in figure and curl that can be found.

All this stock is carefully selected to take care of a discriminating demand.

My figured stumps are all dressed closely and when shipped are practically in shape for

Youwill lose nothing by trying me on your next inquiry.

> FRANK PURCELL Kansas City, Mo., U.S.A.

MATHEWS STANDARD **Gravity Lumber Conveyer**

Made all steel, ball bearing rollers, eight foot sections; easily cover which lumber, flooring, dimension stuff, etc., will travel on a four per cent grade. Adjustable jacks supplied to support conveyer line and secure proper grade. Light, strong and easily portable. Been in successful use for past ten years.

J. H. Bonner & Sons

Mills and Office, QUIGLEY, ARK. Postoffice and Telegraph Office, HETH, ARK. Likuti Nation (c) 64x returned from a trip to the sawnill of the Norman Limes, company at Holly Ridge, La, which is operated by L. B. Nation (c) condent of the company. The Louisville man was especially interested in the operation of the Kraetzer preparator recently instabled at Hol. Ridge.

In order to get part of the Shipp street yard of the W. P. Brown & Sons Lumber Company, which it desires to use in building a boulevard, the park commission of Louisville brought condemnation proceedings. A jury awarded the company 86,400 damages.

H. J. Gates of the Louisville Point Lumber Company is driving a new Cole touring car. Another new automobile in the local lumber fraternity is the 1914 Hup of P. G. Booker, president of the Booker-Ceel Company. Practically all of the Louisville mills are running, and are pretty well stocked up with ogs, of which there are plenty in the country.

— ≺ ARKANSAS ≻

According to Mayor II. M. Jackson of Paragould, Ark., the strike of the coopers at Paragould has about worn itself out. The mills have maintained the same attitude throughout the entire proceedings, taking the position that the strikers had no real grievance and refusing to recognize the union's committee. At the time the strike was made the mills had very little work on hand, and were operating more as an accommodation to the men than for their own benefit, by making up some stock to be held and placed on the market when better prices were to be had. So when the strike occurred the mills were shut down to prevent operating at a loss. When, however, the operators were ready they resumed operations by simply employing other men, and are now proceeding with their work as if nothing out of the ordinary had happened.

The stave manufacturers at Jonesboro, in anticipation of a strike among their employees similar to the one at Paragould, discharged a large number of their employees, and they will now, as the operations of the plant require it, (mploy new men to take their places.

Another move has been made by the railroads of Arkansas, involved in the rate litigation, in securing the appointment of a special master to audit the claims to be made against the small roads in the state which have been acquired by the Missouri Pacific system since the rate litigation began several years ago. These roads, ten in number, are now operating as a part of the Missouri Pacific system, but by reason of the fact that they were independent roads at the time the rate question arose it has been deemed advisable to have a special master appointed for each of them.

Acting upon the petition of the Iron Mountain attorneys, United States District Judge Jacob Trieber on December 6 appointed Judge J. G. Wallace as special master for these roads. Judge Wallace is now serving as special master for receiving and auditing claims filed against the Iron Mountain & Cotton Belt lines. The small roads affected by this are: Arkansas & Louisiana; Mississippi River, Hamburg & Western; Little Rock & Hot Springs Western; Gurdon & Fort Smith; Pine Bluff & Western; Brinkley, Helena and Indian Bay; El Dorado & Bastrop; Arkansas & Southwestern; Arkansas Midland.

Considerable activity is being manifested in railroad building in Arkansas at present. The De Queen & Eastern, which is owned by Dierks Lumber Company interests, has a surveying party in the field for the purpose of making several extensions along its line, and construction will begin in the early part of next year. Other improvements are being made by the Memphis, Dallas & Gulf and the Ashley, Drew & Northern, and other small roads in the state. The Memphis, Dallas & Gulf will extend its line into Pine Bluff. The Ashley, Drew & Northern, which is now operating between Crossett and Monticello, will also extend its line into Pine Bluff. These lines, it seems, are fighting each other in their efforts to arrange for crossing the free bridge across the Arkansas river

B. Cinnamon of Batesville is planning to erect a stave mill near Mountain Home. Several hundred acres of stave timber have been purchased by Mr. Cinnamon, and he proposes to manufacture them in that vicinity for shipping out.

On December 11 R. N. Galbreath, president of the Cotton Belt Savings Bank at Pine Bluff, tendered his resignation as receiver for W. A. Mathews & Co., of Fort Smith, one of the largest manufacturing concerns in the South, which voluntarily went into a receivership about two months ago. The receivership was asked by the company because of financial embarrassments, but it is said that it will soon be lifted. No reason is given by Mr. Galbreath for his resignation. Chancellor W. A. Falconer of the Fort Smith court appointed W. A. Dale of Fort Smith to succeed Mr. Galbreath.

---> WISCONSIN **≺**-----

The Larson Lumber Company has been incorporated at Bundy, with a capital of \$25,000. Ole Larson, Gustave Person, Albert Larson and Gustave Nelson are the incorporators.

The Plymouth Chair Company of Plymouth has filed an amendment to its articles of incorporation increasing its capital from \$20,000 to \$30,000. The Appleton Land and Timber Company of Appleton has filed a notice

with the secretary of state for dissolving as a corporation.

The common council of Lake Geneva has decided on the use of creosoted block in the paving of Main and Broad streets, with sixty-four
foot roadways. The council decided that while creosote block is expen-

sive at the outset, it is the best paying material on the market. The city of Milwaukee laid 50,300 yards of c. o and block pavement during 1915, according to statistics compiled. This material was used on the principal thoroughtare, Grand avenue, where other kinds of paving material have been used with poor results in previous years.

Joseph Assenmacher of Hartford announces the opening of a box factory in connection with his planing mill at 343 Branch street. He will manu-

facture various kinds of boxes and cheese molds,

The Miller Olcott Lumber Cotap, nv +1 C, inberland is putting in a surfacer machine, matcher, siding saw and a rip saw, to be operated by power from a gasoline engine, and will soon have the planing mill in operation.

Fitzgibbon Brothers of Monroe have awarded a contract for the erection of an addition to their carriage factory. It will be of brick, three-story, and measure 26 by 60 feet, costing 85,000,

The Cuctis & Yale Company of Wansan has disposed of its No. 2 plant to H. E. McEachron. The plant was formerly used in the manufacture of wood products and screen goods until the quarters were moved to the main plant on Clinton street. Since that time the plant has been idle, but it is said that some new industry will soon occupy it.

Sawmills at Oconto are being shut down for the season, as usual. The Holt Lumber Company finished sawing at its mill and work was immediately started on overhauling the machinery and preparing for another

year's run to begin after the first of the new year.

A large transaction, involving \$300,000 worth of stock in the Phoenix Chair Company of Sheboygan has been consummated with the purchase of the stock of the states of T. M. illackstock and Mead by A. C. Hahn, treasurer of the chair company. The concern operates one of the largest chair factories in the country and was founded by the late T. M. Blackstock, who held the majority of the stock. The sale was made to settle the estate of the late Mr. Blackstock. Mr. Hahn, the new owner, started with the concern as a boy and he assisted Mr. Blackstock in developing the business, later becoming treasurer. Francis Williams, representing the Mead interests, has been president since Mr. Blackstock's death. The Phoenix company is Shebeygan's pioneer manufacturing institution, and its plant, located near the North-Western passenger station, is one of the largest in the city. During the past year the plant has been further enlarged by the construction of a large brick warehouse,

The plant of the Great Northern Pail Company at Gillett was destroyed by fire on December 5. The fire, of unknown origin, started in one of the dry room departments at an early hour of the morning and had gained such headway before the fire department arrived that the flames could not be gotten under control. The stock and adjacent warehouses were saved. The factory and machinery are a total loss, estimated \$17,000, but are covered by insurance. As the plant included an electric lighting plant which furnished the lights for the town, business was for a time suspended. Smith & Murphy of Green Bay, principal owners, will rebuild at once, replacing the destroyed structure with a modern one

Alex E. McDonald, aged seventy-three, millionaire lumberman and banker of Chippewa Falls, died from hardening of the arteries after an illness of several years, on December 17. He was interested in several lumber companies and president of the Lumbermen's bank. One son, A. McDonald

of Portland Ore survives

The Albrecht Manufacturing Company of Kewaunee is having a new lumber shed erected in its yards east of the main factory. It will have dimensions of 52 by 100 feet, with concrete foundation and be a double deck, metal clad structure, with windows the entire length of the roof.

The Kewaunee Manufacturing Company is also erecting a large addition.

Melchior Eichert, a well-known retired lumberman of Wausau, died in that city after a lingering illness, at the age of seventy-eight years. He at one time conducted a sawmill near Rib Mountain, but retired from the lumber business fifteen years ago. He was a native of Germany, and came to Marathon county thirty-three years ago. Besides his wife one daughter survives him.

Louis Rueping, president of the Fond du Lac Table Manufacturing Company, head of several other large industries and prominent in local financial and business circles, died at his home in that city following a stroke of apoplexy at the age of seventy-four years. Mr. Rueping was born in Germany and has been interested in Fond du Lac business affairs since 1854. He is survived by his wife, four daughters and one son.

Team track storage charges, which had been added to demurrage charges, according to certain railroad rules, will be done away with in Milwaukee on all railroad lines, according to well informed authority. The rule is important to lumbermen who ship logs and lumber by rail. The rate of \$1 a day demurrage per car and \$2 a day per car for team track storage has been in force. The shippers held that this was in effect tripling the demurrage charges and made a vigorous protest. The rule caused so much trouble and so many complications that the railroads decided to discontinue it after January 1. The track storage item will be dropped, which will mean a very material saving to shippers. The plan to extend the rule to state shipments will no doubt be dropped also.

The Keith & Hiles Lumber Company of Crandon is in negotiations with Messrs. Hines and Bennett, government Indian agents, for the sale of 2,500 acres of cut-over lands just east of Crandon upon which the government will locate remnants of the tribes of Pottawottomie Indians,

now scattered over Wisconsin and Michigan.

Return that recompare of Kenosha and establish a new schedule of freight rates for the company between Kenosha and San Francisco.

Formar amount count has been made by Mr. and Mrs. Spencer Carpenter of Menominee, Mich., of the engagement of their daughter, Miss Florence Lucetta Carpenter, and Howard Stephenson, grandson of Senator Isaac Stephenson, prominent lumberman of Marinette. The past generation of both families have been prominent in the lumbering industry. The date for the wedding has not been set.

A suit has been brought in the Wisconsin Supreme Court to test the validity of the purchase by the state of land in Onelda and Vilas counties for a forest reserve. Attorney General W. C. Owen argued for the constitutionality of the state providing for the purchase, appearing for the state against John S. Donald, secretary of state, who, to test the validity of the purchase, refused to sign an order for the \$90,000 the land cost. The state then brought mandamus to compel him to authorize payment of the money.

A bulletin has been issued by the Wisconsin Industrial Commission dealing with infections and their prevention, designed for the use of foremen, superintendents and wage-earners who are subject to the hazards of modern industry. Reports show that in two years, ending September 1, 1913, nearly five per cent, or 721 accidents reported resulted in infection,

The Wisconsin Fruit Package Company of Crandon, which was recently noted as being in bad financial ways and in whose affairs a committee of business and laboring men took active interest, has filed a voluntary petition in bankruptcy in the United States District Court at Milwaukee. The liabilities are scheduled at 865,588.22 and the assets at \$36,025.57. The plans of the committee were to get the creditors to take out stock in amount of their claims and under new management run the plant and pay off the claims. The liabilities are considerably more than first reported.

The Hardwood Market

≺ CHICAGO >=

The Chicago trade is continuing to mark time in line with most of the other large hardwood centers of the country, and there does not seem to be any notable change in the situation or any definite or particular weakening of market conditions. This does not mean that Chicago lumbermen are particularly optimistic, but simply signifies the fact that they have come to accept conditions as they are at their face value, and are making their plans accordingly.

The Chicago trade reports that it has no particular difficulty in picking up mill stocks, but that there is no special tendency on the part of the millmen to shade their prices unduly.

The price level which has been in evidence in Chicago for some little time continues without any marked change one way or the other. That there is a still further easing off in gum, a change barely perceptible, is reported in a few cases, but this does not mean that the wood has attained any less desirable position than it has occupied for some months back.

Various consuming industries locally are not showing any astonishing activity, and are continuing the policy of simply meeting their immediate requirements in the matter of lumber. They do not offer any undue encouragement as to trade after the first of the year, but it is reasonable to suppose that with the opening of the new year's business a somewhat increased activity will be felt.

The lower grades continue to be rather the strong factor in the market with the various woods holding their same relative position that they have occupied for the last few months.

=< NEW YORK >=

The last weeks of 1913 show conditions practically the same as have prevailed for the past six months. The wholesale market is quiet and the retail dealers are chiefly concerned with inventory. There is little question that stock-taking will show yards and factory trade with smaller supplies than ordinarily, and there are some wholesalers who expect the buying trade to show some snap, even if only for a brief period, with the turn of the year. It is not a question of price that has hept buyers out of the market as it is generally felt that prices have gone as low as possible. That general business will show improvement by spring, or sconer, is the opinion of nearly all and with any improvement in demand the market will become firm and values higher.

→ BUFFALO >=

The hardwood trade has shown the usual tendency to the quiet that comes around holiday time. Inventories are about to be taken and buyers are holding off until about the middle of next month. Business at a number of yards is reported to be a little quieter than ordinarily at this time, but this is just as true of other branches of the lumber trade. Dealers are expecting to see a fair amount of improvement next month, and most of them expect the coming year to run along about as the present one has, without much change in prices from those ruling now.

There is no particular activity to any especial hardwood at present.

Plain oak is not making up so large a part of the business as it did earlier in the year, nor are prices quite so strong. Quartered about holds it own. Poplar is not showing moch movement, as the supply is quite large. Brown ash is selling fairly well, while birch and maple are still among the leaders. Low-grade stocks are not plentiful here and bring fair prices.

=**≺** PHILADELPHIA **>**=

As most of the lumber firms close their fiscal year on December 31, stock-taking will soon be in order, and the buying of new material suspended until after the closing up of the year's business. Whatever trading there may be will be confined to actual requirements. Reports coming in from all sides testify to a conservative trading as the keynote of the situation, but despite the many national and local disturbances the aggregate business is admittedly better than was feared, and it is believed that when the balance sheet is completed there will be less disappointment than was anticipated considering the constantly multiplying financial and commercial problems. Dilatory tactics in the manipulation of national questions in Congress will, it is believed, prolong the present state of affairs, but that business will right itself and confidence be wholly restored is believed to be a not remote consummation. The hardwood market at mill ends is in good hands and prices are in the main well sustained. In the buying market there has been some little shading due to the anxiety of some of the smaller men to get business. Quartered oak leads; sound wormy chestnut, elm, ash, and maple are steady; plain oak easier; poplar firm.

=< PITTSBURGH >=

The year 1913 is winding up with very good totals of business among the hardwood firms. Indeed, it is probable that the total amount of hardwood sold this year by Pittsburgh concerns will be a little larger than in 1912. Most concerns are very well satisfied with the year's business. There have been drawbacks, of course, but in the main hardwoods have been so far in the lead of the average wood in the sales market that hardwood wholesalers have little just cause for complaint. Prices of hardwood have been a little soft in some lines the past few weeks. This is attributed to the inventory season, the lack of buying on the part of the railroads and the general slowing down in industrial operations throughout this district. All hardwood men here believe that the prospects now for a good year's business in 1914 are better than they were a year ago.

------≺ BOSTON >=

The general market for hardwood lumber has ruled rather quiet the last few weeks, but this is generally the case at this season of the year. Few buyers are willing during the latter part of December to make purchases of any size unless they have an immediate outlet for the lumber bought, as they plan to keep their stocks down to as low a point as possible during the stock-taking period. The demand for lumber during the first week or two of January is also rather quiet as a rule, as buyers wish to figure their stock sheets before planeing orders. It is the consensus of opinion that large buyers will find their stocks lower this year than usual, as their buying has been restricted to small lots as a whole for some time past. Prices of hardwoods are just as firm excepting in cases where some mill has a lot of lumber that it has been anxious to transfer to some customer's books before the first of the year. There have been fewer cases of this kind reported this year. Offerings as a whole are not large. The call for quartered oak has ruled rather quiet and plain oak has not sold in large lots. Low-grade whitewood is in fair call. Dealers in this market anti-plate a good business after the turn of the year.

-----≺ BALTIMORE >=

With the approach of the end of the year there is taking place a gradual subsidence in the demand for hardwoods of all kinds, not because any real weakening in the market has developed, but for the reason that at this season the calls for stocks always lag, yards and consumers being disposed to reduce their supplies as much as possible, in order that the transfer to the new year may be at the lowest limit. The selling forces are gradually being called in to spend the holidays at home, and the attention is centered upon closing accounts and similar details rather than upon supplementing selections. Under the circumstances, therefore, it is perfectly natural that the movement should be characterized as quiet. With this narrowing of the movement there has come also a lowering of some of the quotations, and information received here is to the effect that Nos. 1 and 2 oak has been offered in New York and other places at concessions. Here and there a seller has larger stocks than he feels he ought to carry, and he is thus impelled to hold out inducements in order to effect a reduction. Chestnut is reported to be about holding its own, with some of the manufacturers asserting that they have made no reductions so far, but admitting also that the movement has been narrowed and that a cut may be made. Sound wormy is stated to be bringing about the figures realized before the rise last spring, and to show up quite well. The higher grades are stronger and in the main chestnut is holding its own. Ash and other hardwoods are about stationary, with the inquiry limited at this time, and the year ending in fair shape. The lower grades of poplar are moving in moderate quantities only, but the

THE QUALITY OF YOUR VENERS

Your profits depend largely on economical production, and uniformly cut veneers lessen the cost of production.

Our employes are experienced, our machinery modern, and we use the best selected logs in Mahogany, Circassian Walnut and Quartered Oak.

Therefore, we will furnish you with absolutely uniform and bone dry sliced or sawed veneers that your men can handle with a minimum outlay of time and labor.

This Means Money in Your Pocket

We will welcome you to our plant (which is so modern it's worth coming to see) or we will send a representative with samples, on request.

Fred W. Black Lumber Co. 2245 S. Crawford Ave. Chicago, Ill.

Start Somewhere

No proposition can be accurately figured out unless a starting point is first established.

Did you ever encounter a man who professed that he was entirely satisfied with his lumber kiln drying results?

Will not even the expert tell you that occasionally his lumber comes through his kiln just right—the next time it is too green—the next time it is too dry—the next time that it is checked, warped or honeycombed?

There is a reason for it.

Usually it is not the fault of the dry kiln.

How can it be expected that woods of various texture, various thickness or at various stages of air dryness can be subjected in a kiln to the same heat, the same ventilation, the same duration of time and accomplish uniformly satisfactory results?

It is an impossible proposition.

START SOMEWHERE.

Start with lumber that is uniform in texture and dryness through and through.

The solution of all lumber-drying difficulties is the employment of

Kraetzer-cure

TRADE MARK

This is lumber treated with steam under pressure in the Kraetzer Patented Preparator.

Lumber that has been treated in this apparatus is fit for the kiln, whether it be 30 days old, 60 days old, or six months old; is delivered without check, split, stain, warp or other seasoning defects, and is of an uniform and mellow texture and color.

This lumber can be satisfactorily kiln-dried in the simplest form of a kiln in one-third of the time that.

ordinary air-dried lumber requires.

The kiln will deliver this lumber as it received it, save for dryness.

Its milling qualities will be vastly improved, as also its strength and elasticity.

The big loss in shrinkage will be avoided.

Furniture or interior finish made of Kraetzer-cured, kiln-dried wood will hold its glue joints, stay where it is put, and the shrinkage and swelling, even under violent atmospheric changes, is almost nil.

It will take filler and even water stains without perceptible raising of the grain.

We will cheerfully supply the names and addresses of all lumber manufacturers who employ the Kraetzer Preparator, naming the kinds of woods they produce. Buy one car of steam treated lumber, handle it

Buy one car of steam treated lumber, handle it through your kilns and into your finished product, and you will be convinced that you cannot afford not to use Kraetzer-cured lumber.

The same desirable results can be achieved on ordinary air-dried lumber with a Preparator as an adjunct to your dry kiln.

The Kraetzer Company 537 S. Dearborn St., CHICAGO

to the state of th

The export situation is rather improved. To be sure, for the present no extensive movement is in progress, but the feeling abroad is better than it has been. Stocks of various kinds have been reduced to easily manageable proportions, and the curtailment has assumed such decisiveness that the buyers abroad are beginning to show a more active interest in the offerings. In many instances advances over previous figures have been realized, though the increase is not sufficiently pronounced to be reflected in any marked expansion in the movement. Apparently the consuming capacity of the foreign trade has been augmented, and a further improvement may be confidently looked for. Drains in directions that absorbed great sums of money have been stopped, and more normal conditions are being restored in the financial circles, which should prove helpful, among other activities, to the lumber trade.

While this is the usual slack season of the year, still the demand for hardwoods during the past fortnight has been rather good. Buying isbeing done for delivery after the first of the year and generally speaking the tone of the market is good. Prices are pretty well maintained at the level which has prevailed for some time.

There is some cutting of prices to force trade, but not much. Dry stocks are not very plentiful and this fact is expected to help market conditions. The car supply is not adequate for all purposes and shipments are coming out much more promptly than has been the case for some time.

Buying on the part of factory managers is the best feature at this time. While plants are not laying in a surplus of materials they are buying what they need for immediate wants. Implement and vehicle concerns are the best customers at this time of the year. Furniture factories are now waiting for the semi-annual show period.

Retailers are not inclined to buy much in the face of the approaching semi-annual inventories. Dealers' stocks are quite small and a better volume of business is anticipated after the first of the year. Building operations which have been quite active during the year have ceased, to a certain extent because of the inclement weather.

The demand for both quartered and plain oak is good and prices are ruling firm in all grades and items. Chestnut is also strong, with sound wormy the best grade. Basswood and ash are moving well and the same is true of poplar, which has been a little slow in previous months. Other hardwoods are unchanged.

------≺ CINCINNATI >-----

Demand for hardwoods is as good at this time of the year as can be expected, as the holiday period together with inventory times is not conducive to producing any more business than is actually necessary from buyers. There is no doubt that there will be very light purchasing at least until after the first of the year, and many dealers are of the opinion that there will not be much for the next three or four months. are holding firm and will likely continue so, there being no reason for any reductions. On the other hand, should there be the very good demand which some dealers expect by the first of next February, there is a good chance for obtaining better prices for a number of the hardwoods. The worst that manufacturers and dealers are looking for is at least a repetition of the hand to mouth purchasing that has been so much in evidence during this year and although repeated orders have been numerous to make up a fair monthly volume dealers would like and fully expect to find buyers a little more liberal in the size of orders There has been a noticeable slowing down in the operations of wood consumers, but this is not taken to mean that it is going to last.

There is a fair call for plain oak, and quartered oak is also in fair request. The better grades of chestnut are not doing so well as several weeks ago but the sound wormy grades are in good demand. There is a very good sale for all kinds of low-grade hardwoods suitable for box making, cottonwood, poplar and gum being in excellent demand for this purpose. Hardwood flooring is in good request and dealers are well satisfied with the market conditions but prices obtainable for this stock are not quite satisfactory.

------≺ INDIANAPOLIS **>**=

Hardwood lumbermen are looking forward to the new year with considerable optimism. While this year has not been what might be termed a disappointment, it has been accompanied by many trade disturbing elements, and the volume of business has not exceeded that of last year.

Indications, however, seem to point toward a revival of business beginning early in the new year. It is thought the financial situation will clarify very shortly and that there will be a general revival of manufacturing interests.

The hardwood business at present is, of course, dull. The trade this mouth probably has not been as good as that of last December. There is no noticeable change in prices, however.

=< MEMPHIS >=

The hardwood market here continues reasonably active ome slowing down as the time for the taking of inventories arrives, but this has not occasioned any surprise, being regarded as an entirely normal development. The outlook for the new year is looked upon with increas ing optimism for the reason that the prospects are bright for the early passage of the currency till and for the additional reason that confl dence appears to be increasing as a result of the more clearly defined attitude of the United States government toward combinations of capital. alleged to be operating in violation of the Sherman anti-trust law. Money is already beginning to get considerably easier and the commercial and financial reports are generally of a more favorable tenor. There has been a steady run of hardwood mills in this city and section throughout the fall and, while there has been a little accumulation, there has not been enough to bring about any pressure on the part of holders, none of whom seems willing to dispose of any of their stock at a sacrifice. This means that prices are pretty well maintained.

The feature of the southern hardwood situation is the continued activity of the lower grades which are, as a general rule, in relatively better demand than the upper. This applies with striking force to cottonwood, gum, oak and cypress. Ash is in good demand in all grades and the movement of other high grade lumber, while rather disappointing in some respects, is reasonably large. Export business is fairly active. Practically the entire hardwood trade of the South is looking forward to Increasing active and more remunerative prices after the turn of the year.

=≺ NASHVILLE ≻=

Business continues seasonably quiet in the hardwood line. Shippers and manufacturers report trade fully up to the average for this season of the year, and while this means light business, conditions seem to be very satisfactory. Lumbermen take an optimistic view of the situation, and believe that there will be healthy business in 1914. Quartered and plain oak continue the best sellers, with some business in poplar, ash, hickory, chestnut and other lines.

=≺ LOUISVILLE >=

Dusiness is regarded as up to the average for this season, the arrival of the holidays naturally cutting down the demand for lumber to a minimum. A fair number of orders have been received for delivery after the first of the year, and it is expected that the situation will show a good deal of snap as soon as the usual inventory period is over. The prospects are regarded as fair, though few expect a big business during the first few months of the new year. With the currency bill out of the way, and with the conclusion of the furniture exhibits, provided the latter turn out well, trade should expand and the hardwood business be satisfactory in all respects. The supply of lumber in first hands is not abnormally large, while stocks in the hands of dealers and consumers are light. Everything seems to point to good business, therefore, if fundamental conditions are favorable.

—< ST. LOUIS ≻=

The hardwood demand is quiet, as it usually is at this time of the year, with the holiday and inventory season so close at hand. The orders now being booked are for quick delivery and urgent needs. Consumers are not doing any buying, as they are getting ready to close down their plants according to their custom. For this reason, little can be said as to conditions. Ash, quartered and plain oak gum, poplar and cottonwood are about the same as they have been for the past few weeks. Prices are steady with few concessions being made to induce buying. The local cypress trade is confined mostly to small orders for quick delivery. This condition is prevailing more this year than is usually the case. Prices are steady and little or no trouble is being experienced by distributors, in getting the prices asked when buyers want the lumber.

===≺ MILWAUKEE ≻=

While the local hardwood business is naturally beginning to fall off, due to the near approach of the holiday season, trade is decidedly better than is usually the case at this time of the year. Unheard of building activity for December has resulted in fairly good orders being placed by the factory trade, even though business from this source is now of the "hand-to-mouth" variety. Stocks in first and second hands are light and a brisk business seems assured soon after the opening of the new year. Just now, most of the manufacturers are busy with their annual inventories and this work will consume most of the time until after January 1.

Wholesalers report that there is a good deal of inquiry concerning various lines, a pretty sure proof that there are better things ahead. Birch, maple and elm are probably the strongest in the northern hardwoods, while basswood is somewhat easier. Stocks are small at the northern mills and there is a general impression that present prices will be well maintained. Some buyers are holding off, evidently in the hope of meeting with lower quotations, but wholesalers do not expect any decline. Plain oak is holding steady in southern hardwoods, while prices on gum are said to be higher. Receipts of southern stocks are fair.

Building operations in Milwaukee soured over the million dollar mark during the first week of December, while during the corresponding period

a year ago, permits for only \$150,455 worth of work were granted. One of the largest permits issued during the month was taken out by the Milwaukee school board for the erection of the new \$400,000 Washington high school. The building inspector is confident that the year's building record will not be far behind the new high record attained in 1912, when more than \$15,000,000 was invested in building here.

The mild weather, which has been experienced up to this date all over the consumation of the date and over the beginns situation and unless there is a change soon, the legging output is bound to be decreased. Not only is there no snow in the northern lumber country, but the ground is not frozen, so that it is impossible to do any hauling or skidding. Lumber companies and logging concerns went into the woods early last fall, but operations have come to a standstill in most cases, as the woods are filled with cut logs, waiting to be moved and hauled.

Because of the extra expense in logging, companies are cutting wages. Many men are naturally thrown out of employment as a result of the unsatisfactory weather conditions and idle men are to be found in all the larger cities, as well as in the lumber country. The monthly report of the Wisconsin Free Employment Bureau shows that the general demand for labor has decreased remarkably of late, while at the same time wages have been cut. The report says that the lumber companies are cancelling their orders for help because of the mild weather and the influx of the unemployed.

——≺ LIVERPOOL ≻=

The market position continues exceedingly quiet. The general conversation at the various exchanges has been quite depressing and there seems little prospect of an encouraging nature for the new year. Prices in almost every direction run lower than at the beginning of this year, though as far as shippers are concerned this fact has some compensation in the lower sea freights now ruling. In fact, probably from their point of view actual profits are running on a higher basis. Round hickory is perhaps the firmest spot on the market but shipment without definite orders is not recommended as some thousands of logs are on the way to this port and this is bound to cause a severe slump. It is really incredible that shippers can be so foolish as to ship stock like hickory on consignment. If they stood out boldly, they could quite easily secure contracts on a sound basis but as things are at present they ruin their market by the suicidal policy of shipping on consignment in parcels which frighten buyers away. In the early part of the season when markets are bare they do gain advantageous prices but on the balance they lose heavily. The same remarks apply to ash planks. In the middle of this year good contracts were secured at very high prices. In the face of this some shippers shipped a few cars on consignment and immediately the bottom was knocked out of the market. If they had been held for a few months probably good prices could have been secured but the financial position of this market is such that no one can afford to hold stock. The same remarks applied to wagon oak earlier in the year. The market has now recovered considerably in the absence recently of consignment shipments. The point is that the danger of consignment shipments gives no encouragement to those prepared to make contracts for forward delivery. These firms should receive every encouragement from shippers. Round ash is a good spot at the moment though shipments should not be made without orders. The mahogany position was decidedly weak at the last sales held. General opinion favors a considerable reduction in value and that stocks are, too heavy. Buyers on the other side are strongly advised to play the waiting game.

=< GLASGOW ≻=

The timber trade in the West of Scotland continues quiet, only occasional transactions of any consequence being reported. In shipbuilding specialities there is a moderate amount of business passing, a steady demand existing for Oregon pine, pitch pine and elm. The existing high prices, no doubt, are not calculated to encourage heavy buying and apart from that those taking stock at the end of the year are naturally disinclined to purchase more than they have immediate use for. In packing case material there is a little movement and there would be considerably more if holders would show more disposition to meet buyers' ideas of price, but this they appear disinclined to do, an indication of their belief that values are likely to be maintained.

The Montreal season has now closed and the last arrival brought in a large quantity of pine deals of which a considerable amount is being stored. The S. S. "Mombassa" from New Orleans Arrived this week and has the usual assorted cargo. The chief items include oak boards, hazel pine boards, California pine strips, sugar pine, hickory and ash logs, pitch pine decks.

So far discharge only is in progress but it is understood that fair proportion is sold on an ex-quay basis.

Staves of all kinds still play a prominent part in this steamer.

The freight market is becoming busier, as indicated by the engagements during the past week.

The last fixture will be for redwood and certainly there has been quite a fair quantity of this sold within the past three months and by the time the chartered vessel arrives the market will be in good shape.

The figures for the Clyde Shipbuilding are just to hand and are as follows: 1913, November, 68,992 tons; 1912, November, 68,488 tons; 1913, January to November, 628,816 tons.

Made from our own timber from one boundary, insuring uniform color and texture; manufactured at our new hardwood flooring plant.

WHY?

WHY do more than 380 of the most prominent and successful lumber manufacturers exchange nearly \$30,000,000.00 of indemnity against fire loss at

Manufacturing Lumbermen's Underwriters

BECAUSE!

BECAUSE it is the oldest and strongest inter-insurance association among lumbermen, being now in its fifteenth year.

BECAUSE \$978,432.40 cash savings have been returned to members.

BECAUSE \$856,831.32 cash surplus, owned entirely by the members, has been accumulated.

BECAUSE \$2,443,029.00 has been paid in losses under prompt and equitable adjustments without resort to quibbling or technical controversy.

BECAUSE it was the first to settle lumber losses on a market value basis.

BECAUSE the regular, frequent and thorough inspections given the plants of all members help them to prevent fires, thus materially reducing both the fire waste and the cost of indemnity.
